Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears [ⓐ **same** / ⓑ **different**]. We might also zoom out to the extent where it appears as a single, [ⓐ **uniform** / ⓑ **varied**] object. We might take the platypus as an [ⓐ **individual** / ⓑ **group**], or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the [ⓐ **monotonous** / ⓑ **varied**] behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

4

Not only does memory underlie our ability to think at all, it [ⓐ **obscures** / ⓑ **defines**] the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories [ⓐ **deteriorate** / ⓑ **remain**] intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories [ⓐ **intensify** / ⓑ **fade**], people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body [ⓐ **alters** / ⓑ **remains**] unchanged.

6

There's a lot of scientific evidence demonstrating that [ⓐ **focused** / ⓑ **distracted**] attention leads to the reshaping of the brain. In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much [ⓐ **smaller** / ⓑ **larger**] auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are [ⓐ **larger** / ⓑ **smaller**]. Brain scans of violinists provide more evidence, showing [ⓐ **insignificant** / ⓑ **dramatic**] growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very [ⓐ **low** / ⓑ **high**] speed. Other studies have shown that the hippocampus, which is [ⓐ **unnecessary** / ⓑ **vital**] for spatial memory, is [ⓐ **reduced** / ⓑ **enlarged**] in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

8

The law of [ⓐ **demand** / ⓑ **supply**] is that the [ⓐ **demand** / ⓑ **supply**] for goods and services [ⓐ **increases** / ⓑ **diminishes**] as prices [ⓐ **fall** / ⓑ **rise**], and the [ⓐ **demand** / ⓑ **supply**] [ⓐ **falls** / ⓑ **rises**] as prices [ⓐ **increase** / ⓑ **decrease**]. Giffen goods are [ⓐ **special** / ⓑ **ordinary**] types of products for which the traditional law of [ⓐ **supply** / ⓑ **demand**] does not apply. Instead of switching to [ⓐ **cheaper** / ⓑ **costlier**] replacements, consumers [ⓐ **reject** / ⓑ **demand**] more of giffen goods when the price [ⓐ **increases** / ⓑ **decreases**] and less of them when the price [ⓐ **decreases** / ⓑ **increases**]. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price [ⓐ **rises** / ⓑ **falls**]. The reason for this is, when the price of rice [ⓐ **rises** / ⓑ **falls**], people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices [ⓐ **decrease** / ⓑ **increase**], people [ⓐ **consume** / ⓑ **abstain**] more rice.

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | 윗글의 내용과 일치하지 않는 것은?

① Bateson says focusing on features helps understanding the world.
② The platypus can be observed as an individual or species.
③ We need extra tools to view aspects of the platypus.
④ Multiple perspectives can be simultaneously adopted.
⑤ Emphasizing certain features means ignoring others.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Gregory Bateson believes we understand the world by ignoring all its features. O | X

02 According to Bateson, it's impossible to focus on both individual hairs and entire ecosystems simultaneously. O | X

03 Bateson suggests that we can only view the platypus as an individual, not as part of a species. O | X

04 We might need extra tools to examine a platypus's hair closely or its role in an ecosystem. O | X

05 Bateson implies that focusing on certain aspects means we fully understand an object. O | X

4

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

01 | 윗글의 내용과 일치하지 않는 것은?

① If one suffers from heart failure and relies on an artificial heart, their identity remains unchanged.
② If one loses an arm and gains an artificial one, their fundamental self is preserved.
③ As long as one's mind and memories are preserved, their identity remains stable, irrespective of physical bodily changes.
④ When one suffers from advanced Alzheimer's disease and memories fade, they are often seen as unaltered since their physical shape remains.
⑤ Memory defines our experiences and how we hold onto them over time.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Memory helps us preserve our experiences for years to come. O | X

02 Replacing a person's heart with an artificial one changes who they are. O | X

03 Losing an arm and getting an artificial one makes you a different person. O | X

04 Advanced Alzheimer's disease can make people feel like someone "is not himself anymore." O | X

05 The passage suggests that the brain is the only part of the body that defines our identity. O | X

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | What does Gregory Bateson suggest about our understanding of the world?

① We focus on the entire world equally.
② We understand the world by focusing on particular features.
③ We cannot understand the world without scientific tools.
④ We must focus on the world as a static entity.

02 | In the example of the platypus, what does Bateson illustrate about perspectives?

① That focusing on individual features can make them appear different.
② That a platypus can only be viewed as an individual.
③ That we should only view animals in terms of their species.
④ That it is impossible to change our perspective once it is chosen.

03 | According to Bateson, what is a limitation of our perspective-taking?

① We can take multiple perspectives at the same time.
② We can only take up one perspective at a time.
③ We need additional tools to take any perspective.
④ We are unable to ignore certain aspects when viewing from a perspective.

4

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

01 | According to the passage, what role does memory play in our lives?

① It helps us perform physical tasks.
② It defines the content of our experiences.
③ It determines our physical appearance.
④ It is irrelevant to our identity.

02 | What does the author suggest would happen if someone had an artificial heart?

① They would lose their identity.
② They would be considered a different person.
③ They would still be essentially the same person.
④ They would suffer from memory loss.

03 | How does the author use the example of Alzheimer's disease to illustrate a point about identity?

① To show that physical changes are more impactful than mental changes.
② To argue that memory is not important for personal identity.
③ To demonstrate that losing memories can make someone seem like a different person.
④ To suggest that Alzheimer's disease primarily affects physical abilities.

2

(A) We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem.

(B) It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems.

(C) Every possible perspective involves emphasizing certain aspects and ignoring others.

(D) Crucially, however, we can only take up one perspective at a time.

(E) Take platypuses. We might zoom in so closely to their fur that each hair appears different.

(F) Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it.

(G) We might also zoom out to the extent where it appears as a single, uniform object.

(H) We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns.

02. Memory makes us _____ _____ _____ .

기억은 우리를 우리가 누구인지로 만들어 준다.

03. If I _____ _____ _____ _____ heart failure and _____ _____ an artificial heart, I _____ _____ _____ _____ _____ .

만약 내가 심장 부전을 앓고 인공 심장에 의존한다 해도 나는 역시 여느 때의 나일 것이다.

04. If I _____ an arm in an accident and _____ _____ _____ with an artificial arm, I _____ _____ _____ _____ _____ .

만약 내가 사고로 한 팔을 잃고 그것을 인공 팔로 교체한다 해도 나는 여전히 본질적으로 '나'일 것이다.

05. As long as my mind and memories _____ _____ , I will continue to be the same person, _____ _____ _____ _____ of my body (other than the brain) _____ _____ .

나의 정신과 기억이 손상되지 않은 한, 나의 신체의 (뇌를 제외한) 어떤 부분이 교체될지라도 나는 계속 같은 사람일 것이다.

06. On the other hand, when someone _____ _____ advanced Alzheimer's disease and his memories _____ , people often say _____ he "is not _____ anymore," or _____ it is _____ _____ the person "is no longer there," _____ his body _____ _____ .

반면 누군가 후기의 알츠하이머병을 앓고 그의 기억이 흐려진다면, 비록 그의 신체는 변하지 않은 채로 남아 있음에도 불구하고 사람들은 종종 그는 '더 이상 여느 때의 그가 아니라고' 혹은 마치 그 사람이 '더 이상 그곳에 없는' 것 같다고 말한다.

Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

*anthropologist: 인류학자 **platypus: 오리너구리

① We can only adopt one point of view at a time.
② Each strand looks separate when we zoom in on the platypus' coat very closely.
③ Platypuses can not only be treated as individuals but also as part of larger units.
④ All perspectives we choose to understand the world entail considering every possible aspect.
⑤ According to Gregory Bateson, we are inclined to comprehend the world by concentrating on certain aspects of it.

Crucially, however, _____.

We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

*anthropologist: 인류학자 **platypus: 오리너구리

① a species is only part of the ecosystem
② we can only take up one perspective at a time
③ there is a better perspective to understand the world
④ it is foolish to say that only one's own perspective is correct
⑤ we have to look at individuals and larger units at the same time

11 다음 주어진 글에 이어질 순서로 알맞은 것은?

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses.

(A) We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

(B) It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time.

(C) We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem.

*anthropologist: 인류학자 **platypus: 오리너구리
