Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears **[ⓐ same / ⓑ different]**. We might also zoom out to the extent where it appears as a single, **[ⓐ uniform / ⓑ varied]** object. We might take the platypus as an **[ⓐ individual / ⓑ group]**, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the **[ⓐ monotonous / ⓑ varied]** behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

4

Not only does memory underlie our ability to think at all, it **[ⓐ obscures / ⓑ defines]** the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories **[ⓐ deteriorate / ⓑ remain]** intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories **[ⓐ intensify / ⓑ fade]**, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body **[ⓐ alters / ⓑ remains]** unchanged.

6

There's a lot of scientific evidence demonstrating that [ⓐ **focused** / ⓑ **distracted**] attention leads to the reshaping of the brain. In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much [ⓐ **smaller** / ⓑ **larger**] auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are [ⓐ **larger** / ⓑ **smaller**]. Brain scans of violinists provide more evidence, showing [ⓐ **insignificant** / ⓑ **dramatic**] growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very [ⓐ **low** / ⓑ **high**] speed. Other studies have shown that the hippocampus, which is [ⓐ **unnecessary** / ⓑ **vital**] for spatial memory, is [ⓐ **reduced** / ⓑ **enlarged**] in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

8

The law of [ⓐ **demand** / ⓑ **supply**] is that the [ⓐ **demand** / ⓑ **supply**] for goods and services [ⓐ **increases** / ⓑ **diminishes**] as prices [ⓐ **fall** / ⓑ **rise**], and the [ⓐ **demand** / ⓑ **supply**] [ⓐ **falls** / ⓑ **rises**] as prices [ⓐ **increase** / ⓑ **decrease**]. Giffen goods are [ⓐ **special** / ⓑ **ordinary**] types of products for which the traditional law of [ⓐ **supply** / ⓑ **demand**] does not apply. Instead of switching to [ⓐ **cheaper** / ⓑ **costlier**] replacements, consumers [ⓐ **reject** / ⓑ **demand**] more of giffen goods when the price [ⓐ **increases** / ⓑ **decreases**] and less of them when the price [ⓐ **decreases** / ⓑ **increases**]. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price [ⓐ **rises** / ⓑ **falls**]. The reason for this is, when the price of rice [ⓐ **rises** / ⓑ **falls**], people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices [ⓐ **decrease** / ⓑ **increase**], people [ⓐ **consume** / ⓑ **abstain**] more rice.

10

If you want the [ⓐ **doubt** / ⓑ **confidence**] that comes from achieving what you set out to do each day, then it's important to understand how long things are going to take. Over-[ⓐ **pessimism** / ⓑ **optimism**] about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a [ⓐ **greater** / ⓑ **lesser**] or [ⓐ **greater** / ⓑ **lesser**] time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a [ⓐ **negligible** / ⓑ **significant**] amount of time available. There is no point in trying to gear up for such a task when you only have a [ⓐ **short** / ⓑ **long**] period available. So schedule the time you need for the [ⓐ **shorter** / ⓑ **longer**] tasks and put the [ⓐ **long** / ⓑ **short**] tasks into the spare moments in between.

12

Restricting the number of items customers can buy [ⓐ **diminishes** / ⓑ **boosts**] sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the [ⓐ **effectiveness** / ⓑ **ineffectiveness**] of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, where there was no limit on the [ⓐ **volume** / ⓑ **scarcity**] of purchases, or two tests, where customers were limited to either four or twelve cans. In the [ⓐ **restricted** / ⓑ **unlimited**] condition shoppers bought 3.3 cans on average, whereas in the [ⓐ **scarce** / ⓑ **abundant**] condition, when there was a limit, they bought 5.3 on average. This suggests [ⓐ **scarcity** / ⓑ **abundance**] encourages sales. The findings are particularly [ⓐ **strong** / ⓑ **weak**] because the test took place in a supermarket with [ⓐ **genuine** / ⓑ **counterfeit**] shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave [ⓐ **similarly** / ⓑ **differently**].

14

A [ⓐ **key** / ⓑ **triviality**] to engagement and achievement is providing students with [ⓐ **relevant** / ⓑ **irrelevant**] texts they will be [ⓐ **interested** / ⓑ **disinterested**] in. My scholarly work and my teaching have been deeply [ⓐ **influenced** / ⓑ **unaffected**] by the work of Rosalie Fink. She interviewed twelve adults who were highly [ⓐ **unsuccessful** / ⓑ **successful**] in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had [ⓐ **insignificant** / ⓑ **significant**] problems with reading throughout their school years. While she expected to find that they had [ⓐ **embraced** / ⓑ **avoided**] reading and discovered ways to bypass it or compensate with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were [ⓐ **enthusiastic** / ⓑ **apathetic**] readers... they rarely [ⓐ **avoided** / ⓑ **pursued**] reading. On the contrary, they [ⓐ **ignored** / ⓑ **sought**] out books." The pattern Fink discovered was that all of her subjects had been [ⓐ **passionate** / ⓑ **indifferent**] in some personal interest. The areas of interest included religion, math, business, science, history, and biography. What mattered was that they read [ⓐ **sparingly** / ⓑ **voraciously**] to find out more.

16

One of the most [ⓐ **unremarkable** / ⓑ **striking**] characteristics of a sleeping animal or person is that they do not respond [ⓐ **normally** / ⓑ **abnormally**] to environmental stimuli. If you open the eyelids of a sleeping mammal the eyes will not see [ⓐ **normally** / ⓑ **abnormally**]—they are functionally blind. Some visual information apparently gets in, but it is not [ⓐ **normally** / ⓑ **abnormally**] processed as it is [ⓐ **extended** / ⓑ **shortened**] or [ⓐ **strengthened** / ⓑ **weakened**]; same with the other sensing systems. Stimuli are registered but not processed [ⓐ **abnormally** / ⓑ **normally**] and they fail to wake the individual. Perceptual disengagement probably serves the function of [ⓐ **endangering** / ⓑ **protecting**] sleep, so some authors do not count it as part of the definition of sleep itself. But as sleep would be [ⓐ **possible** / ⓑ **impossible**] without it, it seems [ⓐ **essential** / ⓑ **unnecessary**] to its definition. Nevertheless, many animals (including humans) use the intermediate state of [ⓐ **alertness** / ⓑ **drowsiness**] to derive some benefits of sleep without total perceptual disengagement.

18

The costs of interruptions are well-documented. Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door." Perhaps the most famous literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an [ⓐ **unexpected** / ⓑ **anticipated**] guest. For Coleridge, by coincidence, the [ⓐ **untimely** / ⓑ **opportune**] visitor came at a particularly [ⓐ **bad** / ⓑ **favorable**] time. He forgot his inspiration and left the work [ⓐ **completed** / ⓑ **unfinished**]. While there are many documented cases of sudden [ⓐ **disruptions** / ⓑ **continuities**] that have had significant consequences for professionals in [ⓐ **critical** / ⓑ **trivial**] roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowing down work [ⓐ **inefficiency** / ⓑ **productivity**] and generally [ⓐ **decreasing** / ⓑ **increasing**] stress levels.

20

People are [ⓐ **repelled** / ⓑ **attracted**] to individuals and things they cannot [ⓐ **reluctantly** / ⓑ **readily**] obtain. In the case with things, people are more attracted to a [ⓐ **unwanted** / ⓑ **desired**] object because it is out of their reach. When the object of desire is finally gained, the attraction for the object rapidly decreases. Christmas presents provide a good example of this [ⓐ **phantom** / ⓑ **phenomenon**]. Toys children wanted all year long are [ⓐ **thrown away** / ⓑ **retained**] several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human [ⓐ **interruption** / ⓑ **interaction**], particularly in the [ⓐ **late** / ⓑ **early**] stages of a [ⓐ **declining** / ⓑ **developing**] relationship. The common dating rule has [ⓐ **unscientific** / ⓑ **scientific**] merit. An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship. A certain level of [ⓐ **unavailability** / ⓑ **availability**] will make you more of a [ⓐ **mastery** / ⓑ **mystery**] and a challenge.

22

The [ⓐ **prevailing** / ⓑ **obscure**] view among developmental scientists is that people are [ⓐ **active** / ⓑ **passive**] contributors to their own development. People are influenced by the [ⓐ **physical** / ⓑ **abstract**] and [ⓐ **solitary** / ⓑ **social**] contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and [ⓐ **construct** / ⓑ **dismantle**] their own development through their interactions. Consider an infant who [ⓐ **frowns** / ⓑ **smiles**] at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. The infant brings adults into [ⓐ **close** / ⓑ **distant**] contact, making [ⓐ **one-on-one** / ⓑ **group**] interactions and creating opportunities for learning. By engaging the world around them, thinking, being [ⓐ **curious** / ⓑ **indifferent**], and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development."

24

Plato's realism [ⓐ **abandons** / ⓑ **includes**] all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was [ⓐ **perfect** / ⓑ **imperfect**]. They all possessed [ⓐ **flaws** / ⓑ **perfections**], and all were subject to [ⓐ **remain** / ⓑ **change**] and [ⓐ **decayed** / ⓑ **rejuvenated**] with time. So how can we talk about [ⓐ **flawed** / ⓑ **perfect**] circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats [ⓐ **leave** / ⓑ **chase**] perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but [ⓐ **perfect** / ⓑ **weird**] world beyond our senses.

26

Individuals who perform at a [ⓐ **low** / ⓑ **high**] level in their profession often have [ⓐ **instant** / ⓑ **delayed**] credibility with others. People [ⓐ **disdain** / ⓑ **admire**] them, they want to be like them, and they feel [ⓐ **connected** / ⓑ **detached**] to them. When they speak, others [ⓐ **listen** / ⓑ **ignore**] — even if the area of their skill has [ⓐ **nothing** / ⓑ **everything**] to do with the advice they give. Think about a world-famous basketball player. He has made [ⓐ **more** / ⓑ **less**] money from endorsements than he ever did playing basketball. Is it because of his [ⓐ **ignorance** / ⓑ **knowledge**] of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the [ⓐ **pool** / ⓑ **desert**]. And when an actor tells us we should drive a [ⓐ **certain** / ⓑ **random**] car, we don't listen because of his expertise on [ⓐ **toys** / ⓑ **engines**]. We listen because we admire his [ⓐ **talent** / ⓑ **ineptitude**]. Excellence connects. If you possess a [ⓐ **high** / ⓑ **low**] level of ability in an area, others may [ⓐ **refuse** / ⓑ **desire**] to connect with you because of it.

28

Every time a new medium comes along — whether it's the [ⓐ **invention** / ⓑ **destruction**] of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special [ⓐ **monochromes** / ⓑ **colors**] and lenses. Each set of goggles you put on makes you see things [ⓐ **similarly** / ⓑ **differently**]. So when you start to watch television, before you absorb the message of any [ⓐ **random** / ⓑ **particular**] TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being [ⓐ **shaped** / ⓑ **disorganized**] like television itself. That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to [ⓐ **silence** / ⓑ **communicate**] — it has buried in it a message. It is gently [ⓐ **guiding** / ⓑ **misleading**] us to see the world according to a new set of codes. The way information gets to you, McLuhan argued, is more [ⓐ **trivial** / ⓑ **important**] than the information itself. TV teaches you that the world is [ⓐ **fast** / ⓑ **slow**]; that it's about [ⓐ **surfaces** / ⓑ **depths**] and [ⓐ **appearances** / ⓑ **realities**].

30

The mind is essentially a [ⓐ **survival** / ⓑ **death**] machine. Attack and defense against other minds, [ⓐ **gathering** / ⓑ **scattering**], storing, and [ⓐ **analyzing** / ⓑ **ignoring**] information — this is what it is good at, but it is not at all [ⓐ **uncreative** / ⓑ **creative**]. All true artists create from a place of no-mind, from [ⓐ **outer** / ⓑ **inner**] stillness. Even great scientists have reported that their creative [ⓐ **breakdowns** / ⓑ **breakthroughs**] came at a time of mental [ⓐ **agitation** / ⓑ **quietude**]. The [ⓐ **predictable** / ⓑ **surprising**] result of a nationwide [ⓐ **injury** / ⓑ **inquiry**] among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a [ⓐ **dominant** / ⓑ **subordinate**] part in the brief, [ⓐ **decisive** / ⓑ **indecisive**] phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to [ⓐ **stop** / ⓑ **start**] thinking!

32

In a study at Princeton University in 1992, research scientists looked at two [ⓐ **identical** / ⓑ **different**] groups of mice. One group was made intellectually [ⓐ **superior** / ⓑ **inferior**] by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually [ⓐ **inferior** / ⓑ **superior**], also done by modifying the gene for the glutamate receptor. The smart mice were then raised in [ⓐ **unconventional** / ⓑ **standard**] cages, while the inferior mice were raised in [ⓐ **large** / ⓑ **small**] cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic [ⓐ **subordinates** / ⓑ **superiors**]. This was a real [ⓐ **failure** / ⓑ **triumph**] for nurture over nature. Genes are turned on or off based on what is [ⓐ **around** / ⓑ **within**] you.

34

Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a [ⓐ **new** / ⓑ **same**] set of questions, such as "Why does Swiss cheese have holes?" These questions were [ⓐ **related** / ⓑ **unrelated**] to the ones asked during the first part of the study, so participants who used the internet had absolutely no [ⓐ **advantage** / ⓑ **disadvantage**] over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how [ⓐ **poorly** / ⓑ **well**] they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more [ⓐ **knowledgeable** / ⓑ **ignorant**] than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to [ⓐ **unrelated** / ⓑ **related**] information was enough to [ⓐ **pump up** / ⓑ **reduce**] their intellectual [ⓐ **doubt** / ⓑ **confidence**].

36

Think of the brain as a city. If you were to look out over a city and ask "where is the [ⓐ **poverty** / ⓑ **economy**] located?" you'd see there's no [ⓐ **good** / ⓑ **bad**] answer to the question. Instead, the economy [ⓐ **emerges** / ⓑ **disappears**] from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in [ⓐ **conjunction** / ⓑ **isolation**]. In brains and in cities, everything emerges from the interaction between residents, at all [ⓐ **details** / ⓑ **scales**], locally and [ⓐ **closely** / ⓑ **distantly**]. Just as trains bring materials and textiles into a city, which become [ⓐ **neglected** / ⓑ **processed**] into the economy, so the raw electrochemical signals from sensory organs are transported along [ⓐ **superhighways** / ⓑ **footpaths**] of neurons. There the signals undergo [ⓐ **stagnation** / ⓑ **processing**] and [ⓐ **transformation** / ⓑ **preservation**] into our [ⓐ **unconscious** / ⓑ **conscious**] reality.

38

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a [ⓐ **regular** / ⓑ **sporadic**] basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate [ⓐ **anecdotes** / ⓑ **statistics**]. For babies, this means that they appear to pay close attention to the patterns that [ⓐ **repeat** / ⓑ **vary**] in language. They remember, in a [ⓐ **systematic** / ⓑ **haphazard**] way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the [ⓐ **rarity** / ⓑ **frequency**] of sound patterns and to use this knowledge to make [ⓐ **predictions** / ⓑ **guesses**] about the meaning in patterns of sounds.

40

Research has [ⓐ **confirmed** / ⓑ **denied**] that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to [ⓐ **improve** / ⓑ **decline**] as athletes progress to higher competitive levels, in part because of the [ⓐ **reduced** / ⓑ **increased**] emphasis on winning. Thus winning can be a [ⓐ **double-edged** / ⓑ **harmless**] sword in teaching character development. Some athletes may want to win so much that they lie, [ⓐ **cheat** / ⓑ **cherish**], and break team rules. They may develop undesirable character traits that can enhance their [ⓐ **ability** / ⓑ **inability**] to win in the short term. However, when athletes [ⓐ **embrace** / ⓑ **resist**] the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a [ⓐ **leased** / ⓑ **learned**] behavior, and a sense of [ⓐ **foul play** / ⓑ **fair play**] develops only if coaches plan to teach those lessons [ⓐ **systematically** / ⓑ **randomly**].

2

Anthropologist Gregory Bateson suggests that we tend to [ⓐ **know** / ⓑ **misunderstand**] the world by focusing in on [ⓐ **general** / ⓑ **specific**] features within it. Take platypuses. We might [ⓐ **examine** / ⓑ **ignore**] in so closely to their fur that each hair appears different. We might also [ⓐ **advance** / ⓑ **pull back**] to the extent where it appears as a single, [ⓐ **alike** / ⓑ **different**] object. We might take the platypus as an [ⓐ **alone** / ⓑ **together**], or we might treat it as part of a larger [ⓐ **group** / ⓑ **individual**] such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to examine in on individual pieces of hair or pull back to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves [ⓐ **highlighting** / ⓑ **hiding**] certain aspects and [ⓐ **overlooking** / ⓑ **noticing**] others.

4

Not only does [ⓐ **recollection** / ⓑ **oblivion**] underlie our ability to think at all, it defines the content of our experiences and how we [ⓐ **neglect** / ⓑ **conserve**] them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories [ⓐ **vanish** / ⓑ **persist**] intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories [ⓐ **intensify** / ⓑ **diminish**], people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

6

There's a lot of scientific evidence demonstrating that [ⓐ **dispersed** / ⓑ **concentrated**] attention leads to the [ⓐ **transformation** / ⓑ **stasis**] of the brain. In animals [ⓐ **compensated** / ⓑ **penalized**] for noticing sound (to hunt or to avoid being hunted for example), we find much larger auditory centers in the brain. In animals rewarded for [ⓐ **keen** / ⓑ **dull**] eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, showing dramatic growth and [ⓐ **contraction** / ⓑ **enlargement**] in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed. Other studies have shown that the hippocampus, which is vital for spatial memory, is [ⓐ **expanded** / ⓑ **contracted**] in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we [ⓐ **execute** / ⓑ **neglect**] doing.

8

The law of [ⓐ **supply** / ⓑ **requisition**] is that the [ⓐ **consumption** / ⓑ **provision**] for goods and services [ⓐ **surges** / ⓑ **plummets**] as prices [ⓐ **soar** / ⓑ **decline**], and the [ⓐ **surplus** / ⓑ **requirement**] [ⓐ **rises** / ⓑ **diminishes**] as prices [ⓐ **plunge** / ⓑ **escalate**]. Giffen goods are special types of products for which the traditional law of [ⓐ **supply** / ⓑ **procurement**] does not apply. Instead of switching to cheaper replacements, consumers [ⓐ **reject** / ⓑ **seek**] more of giffen goods when the price [ⓐ **drops** / ⓑ **rises**] and less of them when the price [ⓐ **soars** / ⓑ **plunges**]. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price [ⓐ **decreases** / ⓑ **climbs**]. The reason for this is, when the price of rice [ⓐ **declines** / ⓑ **surges**], people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices [ⓐ **surge** / ⓑ **drop**], people consume more rice.

10

If you want the [ⓐ **doubt** / ⓑ **assurance**] that comes from achieving what you set out to do each day, then it's important to understand how long things are going to take. Over-[ⓐ **apathy** / ⓑ **enthusiasm**] about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a [ⓐ **shorter** / ⓑ **longer**] or [ⓐ **shorter** / ⓑ **longer**] time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a significant amount of time available. There is no point in trying to gear up for such a task when you only have a [ⓐ **brief** / ⓑ **lengthy**] period available. So schedule the time you need for the [ⓐ **extended** / ⓑ **brief**] tasks and put the [ⓐ **brief** / ⓑ **extended**] tasks into the spare moments in between.

12

Restricting the number of items customers can buy [ⓐ **augments** / ⓑ **diminishes**] sales. Brian Wansink, Professor of Marketing at Cornell University, [ⓐ **disregarded** / ⓑ **examined**] the effectiveness of this tactic in 1998. He [ⓐ **convinced** / ⓑ **dissuaded**] three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small [ⓐ **increase** / ⓑ **reduction**]: 79 cents rather than 89 cents. The discounted soup was [ⓐ **vended** / ⓑ **withheld**] in one of three conditions: a control, where there was no [ⓐ **abundance** / ⓑ **restriction**] on the volume of purchases, or two tests, where customers were [ⓐ **liberated** / ⓑ **constrained**] to either four or twelve cans. In the unlimited condition shoppers [ⓐ **rejected** / ⓑ **purchased**] 3.3 cans on average, whereas in the [ⓐ **abundant** / ⓑ **limited**] condition, when there was a limit, they bought 5.3 on average. This suggests scarcity [ⓐ **discourages** / ⓑ **stimulates**] sales. The [ⓐ **results** / ⓑ **assumptions**] are particularly [ⓐ **robust** / ⓑ **feeble**] because the test took place in a supermarket with [ⓐ **authentic** / ⓑ **counterfeit**] shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might [ⓐ **malfunction** / ⓑ **conduct**] differently.

14

A key to [ⓐ **involvement** / ⓑ **disinterest**] and [ⓐ **failure** / ⓑ **accomplishment**] is providing students with [ⓐ **pertinent** / ⓑ **irrelevant**] texts they will be [ⓐ **bored** / ⓑ **captivated**] by. My scholarly work and my teaching have been deeply influenced by the work of Rosalie Fink. She interviewed twelve adults who were highly successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had significant problems with reading throughout their school years. While she expected to find that they had [ⓐ **shunned** / ⓑ **embraced**] reading and discovered ways to [ⓐ **confront** / ⓑ **circumvent**] it or [ⓐ **neglect** / ⓑ **offset**] with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were [ⓐ **apathetic** / ⓑ **fervent**] readers... they rarely [ⓐ **evaded** / ⓑ **pursued**] reading. On the contrary, they [ⓐ **relinquished** / ⓑ **procured**] books." The pattern Fink discovered was that all of her subjects had been [ⓐ **ardent** / ⓑ **indifferent**] in some personal interest. The areas of interest included religion, math, business, science, history, and biography. What mattered was that they read [ⓐ **avidly** / ⓑ **sparingly**] to find out more.

16

One of the most striking characteristics of a sleeping animal or person is that they do not [ⓐ **react** / ⓑ **initiate**] normally to environmental stimuli. If you open the eyelids of a sleeping mammal the eyes will not [ⓐ **perceive** / ⓑ **ignore**] normally—they are functionally blind. Some visual information apparently gets in, but it is not normally [ⓐ **mishandled** / ⓑ **handled**] as it is [ⓐ **amplified** / ⓑ **diminished**] or weakened; same with the other sensing systems. Stimuli are registered but not processed normally and they fail to [ⓐ **sedate** / ⓑ **arouse**] the individual. [ⓐ **Sensory detachment** / ⓑ **Sensory attachment**] probably serves the function of protecting sleep, so some authors do not count it as part of the definition of sleep itself. But as sleep would be [ⓐ **unattainable** / ⓑ **achievable**] without it, it seems [ⓐ **unnecessary** / ⓑ **crucial**] to its definition. Nevertheless, many animals (including humans) use the intermediate state of [ⓐ **lethargy** / ⓑ **alertness**] to derive some benefits of sleep without total sensory detachment.

18

The costs of [ⓐ **disruptions** / ⓑ **continuities**] are well-documented. Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door." Perhaps the most [ⓐ **renowned** / ⓑ **obscure**] literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an [ⓐ **unforeseen** / ⓑ **expected**] guest. For Coleridge, by [ⓐ **design** / ⓑ **chance**], the untimely visitor came at a particularly [ⓐ **favorable** / ⓑ **adverse**] time. He [ⓐ **misplaced** / ⓑ **retained**] his inspiration and left the work [ⓐ **incomplete** / ⓑ **complete**]. While there are many documented cases of sudden [ⓐ **continuations** / ⓑ **interruptions**] that have had [ⓐ **substantial** / ⓑ **negligible**] consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, [ⓐ **accelerating** / ⓑ **decelerating**] work productivity and generally [ⓐ **augmenting** / ⓑ **reducing**] stress levels.

20

People are [ⓐ **repelled** / ⓑ **drawn**] to individuals and things they cannot [ⓐ **already** / ⓑ **easily**] obtain. In the case with things, people are more attracted to a [ⓐ **discarded** / ⓑ **wanted**] object because it is out of their [ⓐ **reason** / ⓑ **grasp**]. When the object of desire is finally [ⓐ **lost** / ⓑ **obtained**], the attraction for the object [ⓐ **quickly** / ⓑ **slowly**] [ⓐ **diminishes** / ⓑ **increases**]. Christmas presents provide a good example of this [ⓐ **occurrence** / ⓑ **absence**]. Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the early stages of a [ⓐ **declining** / ⓑ **growing**] relationship. The common dating rule has scientific [ⓐ **demerit** / ⓑ **validity**]. An individual should not always make himself or herself readily [ⓐ **accessible** / ⓑ **avoidable**] to the person they are targeting for a longer-term relationship. A certain level of unavailability will make you more of a [ⓐ **certainty** / ⓑ **enigma**] and a challenge.

22

The prevailing [ⓐ **perspective** / ⓑ **ignorance**] among developmental scientists is that people are active contributors to their own [ⓐ **growth** / ⓑ **stagnation**]. People are influenced by the physical and social [ⓐ **vacuums** / ⓑ **environments**] in which they live, but they also play a role in influencing their development by interacting with, and changing, those environments. Even infants [ⓐ **disregard** / ⓑ **affect**] the world around them and construct their own development through their interactions. Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. The infant brings adults into close [ⓐ **proximity** / ⓑ **remoteness**], making one-on-one interactions and creating opportunities for [ⓐ **ignorance** / ⓑ **acquisition**]. By engaging the world around them, [ⓐ **contemplating** / ⓑ **disregarding**], being [ⓐ **inquisitive** / ⓑ **apathetic**], and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development."

24

Plato's [ⓐ **idealism** / ⓑ **pragmatism**] includes all aspects of experience but is most easily [ⓐ **obscured** / ⓑ **elucidated**] by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might [ⓐ **disregard** / ⓑ **designate**] a particular example [ⓐ **erased** / ⓑ **etched**] into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was [ⓐ **defective** / ⓑ **flawless**]. They all possessed [ⓐ **imperfections** / ⓑ **virtues**], and all were subject to [ⓐ **transformation** / ⓑ **stasis**] and [ⓐ **deteriorated** / ⓑ **flourished**] with time. So how can we talk about perfect circles if we cannot actually [ⓐ **observe** / ⓑ **overlook**] or touch them? Plato's [ⓐ **mundane** / ⓑ **remarkable**] answer was that the world we see is a [ⓐ **opulent** / ⓑ **meager**] reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato [ⓐ **doubted** / ⓑ **maintained**] that the Forms or universals are the true reality that [ⓐ **vanishes** / ⓑ **subsists**] in an invisible but perfect world beyond our senses.

26

Individuals who [ⓐ **excel** / ⓑ **falter**] at a high level in their profession often have instant [ⓐ **disrepute** / ⓑ **prestige**] with others. People [ⓐ **revere** / ⓑ **disdain**] them, they want to be like them, and they feel [ⓐ **estranged** / ⓑ **affiliated**] to them. When they speak, others [ⓐ **disregard** / ⓑ **heed**] — even if the area of their [ⓐ **ineptitude** / ⓑ **proficiency**] has nothing to do with the [ⓐ **misguidance** / ⓑ **counsel**] they give. Think about a world-famous basketball player. He has [ⓐ **amassed** / ⓑ **squandered**] more money from endorsements than he ever did playing basketball. Is it because of his [ⓐ **ignorance** / ⓑ **expertise**] of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool. And when an actor tells us we should [ⓐ **operate** / ⓑ **abandon**] a certain car, we don't listen because of his [ⓐ **incompetence** / ⓑ **proficiency**] on engines. We listen because we [ⓐ **venerate** / ⓑ **despise**] his [ⓐ **aptitude** / ⓑ **ineptitude**]. Excellence connects. If you [ⓐ **wield** / ⓑ **lack**] a high level of ability in an area, others may [ⓐ **shun** / ⓑ **crave**] to connect with you because of it.

28

Every time a new [ⓐ **platform** / ⓑ **obstruction**] comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to [ⓐ **utilize** / ⓑ **neglect**] it, it's like you are putting on a new kind of goggles, with their own special colors and [ⓐ **blindfolds** / ⓑ **optics**]. Each set of goggles you put on makes you [ⓐ **perceive** / ⓑ **overlook**] things differently. So when you start to watch television, before you [ⓐ **reject** / ⓑ **assimilate**] the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being [ⓐ **disintegrated** / ⓑ **molded**] like television itself. That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to [ⓐ **isolate** / ⓑ **interact**] — it has [ⓐ **embedded** / ⓑ **exposed**] in it a message. It is gently [ⓐ **obstructing** / ⓑ **steering**] us to see the world according to a new set of [ⓐ **protocols** / ⓑ **chaos**]. The way information [ⓐ **reaches** / ⓑ **evades**] you, McLuhan argued, is more [ⓐ **trivial** / ⓑ **significant**] than the information itself. TV [ⓐ **instructs** / ⓑ **confuses**] you that the world is [ⓐ **rapid** / ⓑ **stagnant**]; that it's about [ⓐ **exteriors** / ⓑ **depths**] and appearances.

30

The mind is essentially a [ⓐ **preservation** / ⓑ **destruction**] machine. Attack and defense against other minds, gathering, storing, and analyzing information — this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner [ⓐ **calmness** / ⓑ **turmoil**]. Even great scientists have reported that their creative [ⓐ **discoveries** / ⓑ **failures**] came at a time of mental [ⓐ **tranquility** / ⓑ **turbulence**]. The surprising [ⓐ **outset** / ⓑ **outcome**] of a nationwide [ⓐ **survey** / ⓑ **injury**] among America's most famous mathematicians, including Einstein, to find out their working [ⓐ **goals** / ⓑ **techniques**], was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple [ⓐ **season** / ⓑ **cause**] why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

32

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually [ⓐ **subordinate** / ⓑ **preeminent**] by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in [ⓐ **ignorance** / ⓑ **comprehension**]. The other group was genetically manipulated to be intellectually [ⓐ **exceptional** / ⓑ **deficient**], also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social [ⓐ **engagement** / ⓑ **isolation**]. At the end of the study, although the intellectually inferior mice were genetically [ⓐ **impaired** / ⓑ **advantaged**], they were able to perform just as well as their genetic superiors. This was a real [ⓐ **victory** / ⓑ **defeat**] for nurture over nature. Genes are turned on or off based on what is [ⓐ **absent** / ⓑ **surrounding**] you.

34
Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the [ⓐ **members** / ⓑ **outsiders**] were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no [ⓐ **drawback** / ⓑ **benefit**] over those who hadn't. You would think that both sets of participants would be equally [ⓐ **doubtful** / ⓑ **confident**] or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more [ⓐ **smart** / ⓑ **dumb**] than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to [ⓐ **decrease** / ⓑ **boost**] their intellectual confidence.

36
Think of the brain as a city. If you were to look out over a city and ask "where is the economy [ⓐ **displaced** / ⓑ **situated**]?" you'd see there's no good answer to the question. Instead, the economy [ⓐ **disappears** / ⓑ **arises**] from the [ⓐ **isolation** / ⓑ **interplay**] of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's [ⓐ **functioning** / ⓑ **stagnation**]: it doesn't happen in one spot. Just as in a city, no [ⓐ **district** / ⓑ **entirety**] of the brain operates in [ⓐ **seclusion** / ⓑ **connection**]. In brains and in cities, everything emerges from the interaction between [ⓐ **visitors** / ⓑ **inhabitants**], at all scales, locally and distantly. Just as trains bring materials and textiles into a city, which become [ⓐ **integrated** / ⓑ **excluded**] into the economy, so the [ⓐ **unrefined** / ⓑ **polished**] electrochemical signals from sensory organs are [ⓐ **conveyed** / ⓑ **impeded**] along superhighways of neurons. There the signals undergo processing and [ⓐ **stagnation** / ⓑ **metamorphosis**] into our [ⓐ **oblivious** / ⓑ **cognizant**] reality.

38

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a [ⓐ **frequent** / ⓑ **rare**] basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to [ⓐ **guess** / ⓑ **compute**] statistics. For babies, this means that they appear to pay close attention to the patterns that [ⓐ **recur** / ⓑ **cease**] in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the [ⓐ **anomaly** / ⓑ **regularity**] of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

40

Research has [ⓐ **verified** / ⓑ **conformed**] that athletes are less likely to participate in [ⓐ **improper** / ⓑ **acceptable**] behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to [ⓐ **improve** / ⓑ **diminish**] as athletes progress to higher competitive levels, in part because of the increased [ⓐ **stress** / ⓑ **empathy**] on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop [ⓐ **unfavorable** / ⓑ **desirable**] character traits that can [ⓐ **boost** / ⓑ **diminish**] their ability to win in the short term. However, when athletes [ⓐ **withstand** / ⓑ **persist**] the [ⓐ **temperament** / ⓑ **allure**] to win in a [ⓐ **deceitful** / ⓑ **honest**] way, they can develop [ⓐ **admirable** / ⓑ **negative**] character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those [ⓐ **lesions** / ⓑ **principles**] [ⓐ **methodically** / ⓑ **randomly**].

2

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | 윗글의 내용과 일치하지 않는 것은?

① Bateson says focusing on features helps understanding the world.
② The platypus can be observed as an individual or species.
③ We need extra tools to view aspects of the platypus.
④ Multiple perspectives can be simultaneously adopted.
⑤ Emphasizing certain features means ignoring others.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Gregory Bateson believes we understand the world by ignoring all its features. O | X

02 According to Bateson, it's impossible to focus on both individual hairs and entire ecosystems simultaneously. O | X

03 Bateson suggests that we can only view the platypus as an individual, not as part of a species. O | X

04 We might need extra tools to examine a platypus's hair closely or its role in an ecosystem. O | X

05 Bateson implies that focusing on certain aspects means we fully understand an object. O | X

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

01 | 윗글의 내용과 일치하지 않는 것은?

① If one suffers from heart failure and relies on an artificial heart, their identity remains unchanged.

② If one loses an arm and gains an artificial one, their fundamental self is preserved.

③ As long as one's mind and memories are preserved, their identity remains stable, irrespective of physical bodily changes.

④ When one suffers from advanced Alzheimer's disease and memories fade, they are often seen as unaltered since their physical shape remains.

⑤ Memory defines our experiences and how we hold onto them over time.

ㅎ

There's a lot of scientific evidence demonstrating that focused attention leads to the reshaping of the brain. In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much larger auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed. Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

04 The hippocampus is important for spatial memory. O | X

05 The brain's structure remains unchanged regardless of what we practice. O | X

요

The law of demand is that the demand for goods and services increases as prices fall, and the demand falls as prices increase. Giffen goods are special types of products for which the traditional law of demand does not apply. Instead of switching to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price falls. The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices increase, people consume more rice.

10

If you want the confidence that comes from achieving what you set out to do each day, then it's important to understand how long things are going to take. Over-optimism about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a greater or lesser time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a significant amount of time available. There is no point in trying to gear up for such a task when you only have a short period available. So schedule the time you need for the longer tasks and put the short tasks into the spare moments in between.

01 | 윗글의 내용과 일치하지 않는 것은?

① Time estimation aids in accomplishing daily tasks.
② Over-optimism about time frame completion is problematic.
③ Tasks should fit the available time.
④ Short tasks should be scheduled during longer periods.
⑤ Experience helps in understanding expected task time.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Confidence is boosted by completing daily goals. O | X

02 Being overly optimistic about time is beneficial for achieving goals. O | X

03 Estimating time for tasks is unnecessary for effective planning. O | X

04 All tasks can be started regardless of the amount of available time. O | X

05 It's advised to fit shorter tasks into the gaps between longer tasks. O | X

12

Restricting the number of items customers can buy boosts sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, where there was no limit on the volume of purchases, or two tests, where customers were limited to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there was a limit, they bought 5.3 on average. This suggests scarcity encourages sales. The findings are particularly strong because the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave differently.

A key to engagement and achievement is providing students with relevant texts they will be interested in. My scholarly work and my teaching have been deeply influenced by the work of Rosalie Fink. She interviewed twelve adults who were highly successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had significant problems with reading throughout their school years. While she expected to find that they had avoided reading and discovered ways to bypass it or compensate with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were enthusiastic readers... they rarely avoided reading. On the contrary, they sought out books." The pattern Fink discovered was that all of her subjects had been passionate in some personal interest. The areas of interest included religion, math, business, science, history, and biography. What mattered was that they read voraciously to find out more.

01 | 윗글의 내용과 일치하지 않는 것은?

① Rosalie Fink's study focused solely on physically impaired adults.
② All subjects in Fink's study had dyslexia and difficulties with reading.
③ The subjects in the study embraced reading despite their dyslexia.
④ The subjects had personal interests they passionately pursued.
⑤ The areas of interest of the subjects varied widely, including religion and history.

People are attracted to individuals and things they cannot readily obtain. In the case with things, people are more attracted to a desired object because it is out of their reach. When the object of desire is finally gained, the attraction for the object rapidly decreases. Christmas presents provide a good example of this phenomenon. Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship. The common dating rule has scientific merit. An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship. A certain level of unavailability will make you more of a mystery and a challenge.

The prevailing view among developmental scientists is that people are active contributors to their own development. People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and construct their own development through their interactions. Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning. By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development."

24

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

01 | 윗글의 내용과 일치하지 않는 것은?

① Plato's realism involves every aspect of experience.
② Plato questioned the nature of circles.
③ The physical circles Plato observed were flawed and decayed over time.
④ Perfect circles exist in the observable reality around us.
⑤ Plato's belief was that Forms or universals comprise the unseen perfect reality.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Plato's realism is only applicable to mathematical objects. O | X

02 According to Plato, physical circles can be perfect. O | X

03 Plato believed in an unseen reality where perfect forms exist. O | X

04 Physical objects are subject to change and decay, according to Plato. O | X

05 Plato thought that the world we see is the true reality. O | X

Individuals who perform at a high level in their profession often have instant credibility with others. People admire them, they want to be like them, and they feel connected to them. When they speak, others listen — even if the area of their skill has nothing to do with the advice they give. Think about a world-famous basketball player. He has made more money from endorsements than he ever did playing basketball. Is it because of his knowledge of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool. And when an actor tells us we should drive a certain car, we don't listen because of his expertise on engines. We listen because we admire his talent. Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you because of it.

O1 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 High-performing individuals automatically gain credibility with others. O | X

02 People listen to a basketball player due to his product knowledge. O | X

03 An Olympic swimmer is admired for his expertise in engines. O | X

04 A famous actor's car advice is listened to due to his acting talent. O | X

05 People want to connect with those who excel in a particular area. O | X

28

Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on makes you see things differently. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being shaped like television itself. That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. It is gently guiding us to see the world according to a new set of codes. The way information gets to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; that it's about surfaces and appearances.

01 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 New media make us view the world through unique lenses. O | X

02 Marshall McLuhan claimed that the content of a medium is its main message. O | X

03 Watching TV shapes our perception of the world like TV itself. O | X

04 The invention of the printed book did not change how people see things. O | X

05 According to McLuhan, TV emphasizes depth over appearances. O | X

A2 본문 O/X 1 — 2 — 3

30

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information — this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner stillness. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

01 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 The mind is chiefly a survival tool, yet it is highly creative. O | X

02 True artists create from inner calm rather than from active thought. O | X

03 Great scientists reported that breakthroughs came while they were thinking intensely. O | X

04 The inquiry concluded that thinking was central during creativity's brief decisive stage. O | X

05 Most scientists are uncreative because they do not know how to think. O | X

32

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually superior by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors. This was a real triumph for nurture over nature. Genes are turned on or off based on what is around you.

01 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 The study at Princeton took place in 1992. O | X

02 The smart mice were placed in large cages with toys. O | X

03 Glutamate is unnecessary for learning. O | X

04 Inferior mice performed as well as superior mice in the end. O | X

05 Genes are influenced by the surrounding environment. O | X

34

Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

01 | 윗글의 내용과 일치하지 않는 것은?

① Half of the participants were told to search for answers online.
② Participants who used the internet rated themselves more knowledgeable.
③ The study's second part asked questions related to the first part.
④ The study aimed to investigate the impact of internet on confidence.
⑤ The participants who used internet had no advantage in the second part.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 All participants were allowed to use the internet for the first set of questions. O | X

02 The second set of questions was related to the moon's phases. O | X

03 Participants who used the internet felt less confident in their knowledge. O | X

04 The study concluded that access to the internet can inflate self-perceived knowledge. O | X

05 Participants were more knowledgeable about Swiss cheese holes after the study. O | X

36

Think of the brain as a city. If you were to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question. Instead, the economy emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in isolation. In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly. Just as trains bring materials and textiles into a city, which become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons. There the signals undergo processing and transformation into our conscious reality.

01 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 The brain's operation is centralized in one specific part. O | X

02 In a city, the economy is found in a single location. O | X

03 Brain neighborhoods function independently without interaction. O | X

04 Electrochemical signals are transported along neuron superhighways. O | X

05 Conscious reality is formed without processing sensory signals. O | X

정답

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics. For babies, this means that they appear to pay close attention to the patterns that repeat in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

01 | 윗글의 내용과 일치하지 않는 것은?

① Babies construct expectations about sound sequences over time.

② Babies don't use sound patterns in memory to learn language.

③ Babies pay close attention to repeated patterns in language.

④ Babies can use their knowledge to predict sound pattern meanings.

⑤ Babies remember how frequently certain sound patterns occur.

02 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Babies ignore the patterns that repeat in language. O | X

02 Babies form expectations about the sounds they will hear. O | X

03 Scientists believe babies' language learning is not related to their statistical abilities. O | X

04 Babies remember how often sounds occur and in what order. O | X

05 Babies' neural circuits track the frequency of sound patterns. O | X

40

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can enhance their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

O1 | 다음 글의 내용과 일치하면 O, 일치하지 않으면 X를 고르시오.

01 Compared with non-athletes, athletes are less likely to engage in unacceptable conduct. O | X

02 Athletes' moral reasoning and sportsmanship improve as they reach higher levels of competition. O | X

03 Athletes determined to win may lie, cheat, and follow every team rule. O | X

04 These undesirable traits reduce athletes' chances of winning during the short term. O | X

05 Positive traits lasting a lifetime cause athletes to resist winning dishonestly. O | X

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

There's a lot of scientific evidence demonstrating that focused attention leads to the reshaping of the brain. In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much larger auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed. Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

The law of demand is that the demand for goods and services increases as prices fall, and the demand falls as prices increase. Giffen goods are special types of products for which the traditional law of demand does not apply. Instead of switching to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price falls. The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices increase, people consume more rice.

If you want the confidence that comes from achieving what you set out to do each day, then it's important to understand how long things are going to take. Over-optimism about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a greater or lesser time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a significant amount of time available. There is no point in trying to gear up for such a task when you only have a short period available. So schedule the time you need for the longer tasks and put the short tasks into the spare moments in between.

Restricting the number of items customers can buy boosts sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, where there was no limit on the volume of purchases, or two tests, where customers were limited to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there was a limit, they bought 5.3 on average. This suggests scarcity encourages sales. The findings are particularly strong because the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave differently.

A key to engagement and achievement is providing students with relevant texts they will be interested in. My scholarly work and my teaching have been deeply influenced by the work of Rosalie Fink. She interviewed twelve adults who were highly successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had significant problems with reading throughout their school years. While she expected to find that they had avoided reading and discovered ways to bypass it or compensate with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were enthusiastic readers... they rarely avoided reading. On the contrary, they sought out books." The pattern Fink discovered was that all of her subjects had been passionate in some personal interest. The areas of interest included religion, math, business, science, history, and biography. What mattered was that they read voraciously to find out more.

One of the most striking characteristics of a sleeping animal or person is that they do not respond normally to environmental stimuli. If you open the eyelids of a sleeping mammal the eyes will not see normally — they are functionally blind. Some visual information apparently gets in, but it is not normally processed as it is shortened or weakened; same with the other sensing systems. Stimuli are registered but not processed normally and they fail to wake the individual. Perceptual disengagement probably serves the function of protecting sleep, so some authors do not count it as part of the definition of sleep itself. But as sleep would be impossible without it, it seems essential to its definition. Nevertheless, many animals (including humans) use the intermediate state of drowsiness to derive some benefits of sleep without total perceptual disengagement.

The costs of interruptions are well-documented. Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door." Perhaps the most famous literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an unexpected guest. For Coleridge, by coincidence, the untimely visitor came at a particularly bad time. He forgot his inspiration and left the work unfinished. While there are many documented cases of sudden disruptions that have had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowing down work productivity and generally increasing stress levels.

People are attracted to individuals and things they cannot readily obtain. In the case with things, people are more attracted to a desired object because it is out of their reach. When the object of desire is finally gained, the attraction for the object rapidly decreases. Christmas presents provide a good example of this phenomenon. Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship. The common dating rule has scientific merit. An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship. A certain level of unavailability will make you more of a mystery and a challenge.

The prevailing view among developmental scientists is that people are active contributors to their own development. People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and construct their own development through their interactions. Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning. By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are “manufacturers of their own development.”

The Interactive Nature of Human Growth

☑ 다음 글의 제목으로 가장 적절한 것은?

The prevailing view among developmental scientists is that people are active contributors to their own development. People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and construct their own development through their interactions. Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use “baby talk,” and play with him in response. The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning. By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are “manufacturers of their own development.”

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

Individuals who perform at a high level in their profession often have instant credibility with others. People admire them, they want to be like them, and they feel connected to them. When they speak, others listen — even if the area of their skill has nothing to do with the advice they give. Think about a world-famous basketball player. He has made more money from endorsements than he ever did playing basketball. Is it because of his knowledge of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool. And when an actor tells us we should drive a certain car, we don't listen because of his expertise on engines. We listen because we admire his talent. Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you because of it.

Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on makes you see things differently. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being shaped like television itself. That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. It is gently guiding us to see the world according to a new set of codes. The way information gets to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; that it's about surfaces and appearances.

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information — this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner stillness. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually superior by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors. This was a real triumph for nurture over nature. Genes are turned on or off based on what is around you.

Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

Think of the brain as a city. If you were to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question. Instead, the economy emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in isolation. In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly. Just as trains bring materials and textiles into a city, which become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons. There the signals undergo processing and transformation into our conscious reality.

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics. For babies, this means that they appear to pay close attention to the patterns that repeat in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

주제 The role of sound patterns in babies' language learning.

Babies' ability in learning language through sound patterns

제목 Babies' Calculation of Language Statistics

Babies' Language Learning Through Sound Patterns

☑ 다음 글의 주제로 가장 적절한 것은?

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can enhance their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

주제 The double-edged nature of winning in sports character development and the necessity of systematic coaching
How high competitive pressure affects athletes' moral reasoning and why character must be intentionally taught

제목 Winning as a Double-Edged Sword: Character Building in Sports
The Impact of Competitive Pressure on Athletes' Moral Development

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | What does Gregory Bateson suggest about our understanding of the world?

① We focus on the entire world equally.
② We understand the world by focusing on particular features.
③ We cannot understand the world without scientific tools.
④ We must focus on the world as a static entity.

02 | In the example of the platypus, what does Bateson illustrate about perspectives?

① That focusing on individual features can make them appear different.
② That a platypus can only be viewed as an individual.
③ That we should only view animals in terms of their species.
④ That it is impossible to change our perspective once it is chosen.

03 | According to Bateson, what is a limitation of our perspective-taking?

① We can take multiple perspectives at the same time.
② We can only take up one perspective at a time.
③ We need additional tools to take any perspective.
④ We are unable to ignore certain aspects when viewing from a perspective.

4

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

01 | According to the passage, what role does memory play in our lives?

① It helps us perform physical tasks.
② It defines the content of our experiences.
③ It determines our physical appearance.
④ It is irrelevant to our identity.

02 | What does the author suggest would happen if someone had an artificial heart?

① They would lose their identity.
② They would be considered a different person.
③ They would still be essentially the same person.
④ They would suffer from memory loss.

03 | How does the author use the example of Alzheimer's disease to illustrate a point about identity?

① To show that physical changes are more impactful than mental changes.
② To argue that memory is not important for personal identity.
③ To demonstrate that losing memories can make someone seem like a different person.
④ To suggest that Alzheimer's disease primarily affects physical abilities.

6

There's a lot of scientific evidence demonstrating that focused attention leads to the reshaping of the brain. In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much larger auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed. Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

01 | According to the passage, what happens to the auditory centers in the brains of animals rewarded for noticing sound?

① They become smaller.
② They become larger.
③ They remain the same.
④ They become inactive.

02 | What evidence is provided to show the effect of focused attention on the brain in violinists?

① Increased size of the hippocampus.
② Growth in regions of the cortex representing the left hand.
③ Enlargement of the auditory centers.
④ No significant changes are observed.

03 | What is the main point the author is making about the brain's physical architecture?

① It is static and unchanging.
② It deteriorates over time regardless of activity.
③ It changes according to where we direct our attention and what we practice.
④ It is primarily influenced by genetic factors.

8

The law of demand is that the demand for goods and services increases as prices fall, and the demand falls as prices increase. Giffen goods are special types of products for which the traditional law of demand does not apply. Instead of switching to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases. Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price falls. The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern. On the other hand, as rice prices increase, people consume more rice.

01 | What is the traditional law of demand?

① Demand for goods and services increases as prices increase.
② Demand for goods and services decreases as prices fall.
③ Demand for goods and services increases as prices fall.
④ Demand for goods and services remains constant regardless of price changes.

02 | What is unique about Giffen goods in relation to the law of demand?

① They follow the traditional law of demand.
② Consumers demand more of them when the price decreases.
③ Consumers demand more of them when the price increases.
④ They have no impact on consumer spending patterns.

03 | Why do people in China purchase less rice when its price falls?

① They prefer to save money for future use.
② They have more money to spend on other products like meat and dairy.
③ They consume more rice when it becomes cheaper.
④ They switch to other types of grains.

10

If you want the confidence that comes from achieving what you set out to do each day, then it's important to understand how long things are going to take. Over-optimism about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a greater or lesser time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a significant amount of time available. There is no point in trying to gear up for such a task when you only have a short period available. So schedule the time you need for the longer tasks and put the short tasks into the spare moments in between.

01 | What is the primary solution suggested for achieving daily goals according to the passage?

① Working longer hours
② Estimating the time needed for tasks
③ Completing the easiest tasks first
④ Avoiding over-optimism

02 | According to the passage, what issue does over-optimism cause?

① It leads to procrastination.
② It makes tasks seem more difficult.
③ It results in underestimating the time needed for tasks.
④ It causes a lack of confidence.

03 | How does the passage suggest handling tasks that require a significant amount of time?

① By breaking them into smaller tasks
② By scheduling them when you have a long period available
③ By avoiding these tasks altogether
④ By completing them in the spare moments

12

Restricting the number of items customers can buy boosts sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, where there was no limit on the volume of purchases, or two tests, where customers were limited to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there was a limit, they bought 5.3 on average. This suggests scarcity encourages sales. The findings are particularly strong because the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave differently.

01 | What was the main objective of Brian Wansink's study conducted in Sioux City, Iowa?

① To determine the impact of price increases on sales
② To investigate the effectiveness of purchase limits on sales
③ To assess the popularity of Campbell's soup
④ To compare sales tactics between different supermarkets

02 | How did the average number of cans purchased differ between the unlimited and scarce conditions?

① Shoppers bought the same number of cans in both conditions
② Shoppers bought more cans in the unlimited condition
③ Shoppers bought more cans in the scarce condition
④ Shoppers bought fewer cans in the scarce condition

03 | Why are the findings of the study considered particularly strong?

① The study was conducted over a long period
② The study involved a large number of supermarkets
③ The study used genuine shoppers in a real supermarket setting
④ The study was conducted by a well-known university

14

A key to engagement and achievement is providing students with relevant texts they will be interested in. My scholarly work and my teaching have been deeply influenced by the work of Rosalie Fink. She interviewed twelve adults who were highly successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had significant problems with reading throughout their school years. While she expected to find that they had avoided reading and discovered ways to bypass it or compensate with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were enthusiastic readers... they rarely avoided reading. On the contrary, they sought out books." The pattern Fink discovered was that all of her subjects had been passionate in some personal interest. The areas of interest included religion, math, business, science, history, and biography. What mattered was that they read voraciously to find out more.

01 | What is identified as a key factor for student engagement and achievement according to the passage?

① Providing challenging texts
② Offering relevant and interesting texts
③ Limiting reading materials
④ Focusing solely on traditional teaching methods

02 | What was the unexpected finding by Rosalie Fink about dyslexic individuals?

① They avoided reading completely
② They were enthusiastic readers
③ They only read academic texts
④ They did not find reading useful

03 | What common trait did the subjects in Fink's study share?

① They all had advanced degrees
② They all came from similar backgrounds
③ They were passionate about personal interests
④ They disliked reading about new subjects

16

One of the most striking characteristics of a sleeping animal or person is that they do not respond normally to environmental stimuli. If you open the eyelids of a sleeping mammal the eyes will not see normally—they are functionally blind. Some visual information apparently gets in, but it is not normally processed as it is shortened or weakened; same with the other sensing systems. Stimuli are registered but not processed normally and they fail to wake the individual. Perceptual disengagement probably serves the function of protecting sleep, so some authors do not count it as part of the definition of sleep itself. But as sleep would be impossible without it, it seems essential to its definition. Nevertheless, many animals (including humans) use the intermediate state of drowsiness to derive some benefits of sleep without total perceptual disengagement.

01 | What is a notable characteristic of a sleeping animal or person according to the passage?

① They are more sensitive to environmental stimuli.
② They do not respond normally to environmental stimuli.
③ They become more active.
④ They process information better than when awake.

02 | What happens when the eyelids of a sleeping mammal are opened?

① The eyes function normally.
② The eyes see normally but do not process information.
③ The eyes are functionally blind.
④ The animal immediately wakes up.

03 | How do many animals, including humans, benefit from the state of drowsiness?

① They achieve total perceptual disengagement.
② They derive some benefits of sleep without total perceptual disengagement.
③ They become fully alert and responsive.
④ They process environmental stimuli more effectively.

18

The costs of interruptions are well-documented. Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door." Perhaps the most famous literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an unexpected guest. For Coleridge, by coincidence, the untimely visitor came at a particularly bad time. He forgot his inspiration and left the work unfinished. While there are many documented cases of sudden disruptions that have had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowing down work productivity and generally increasing stress levels.

01 | According to the passage, what did Martin Luther King Jr. lament about?

① The lack of time to write poetry
② The impact of interruptions on creativity
③ The difficulty of writing poetry
④ The challenge of public speaking

02 | What happened to Samuel Taylor Coleridge's poem "Kubla Khan" according to the passage?

① It was completed and published successfully
② It was lost due to a fire
③ It remained unfinished due to an interruption
④ It was plagiarized by another poet

03 | Which of the following professionals is NOT mentioned in the passage as being affected by interruptions?

① Doctors
② Teachers
③ Stock traders
④ Pilots

20

People are attracted to individuals and things they cannot readily obtain. In the case with things, people are more attracted to a desired object because it is out of their reach. When the object of desire is finally gained, the attraction for the object rapidly decreases. Christmas presents provide a good example of this phenomenon. Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship. The common dating rule has scientific merit. An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship. A certain level of unavailability will make you more of a mystery and a challenge.

01 | What happens to people's attraction to a desired object once they finally obtain it?

① It gradually becomes stronger over time.
② It rapidly decreases.
③ It remains exactly the same.
④ It changes into fear.

02 | How do Christmas presents illustrate the phenomenon described in the passage?

① Children value toys more after playing with them for years.
② Children often reject gifts because they did not choose them.
③ Toys that children desired for a long time may be discarded soon after being received.
④ Parents tend to hide toys from children until Christmas morning.

03 | According to the passage, why might a certain level of unavailability be useful in an early romantic relationship?

① It makes a person seem more mysterious and challenging.
② It proves that a person is unwilling to form a serious relationship.
③ It allows both people to avoid communicating with each other.
④ It causes the target person to lose interest immediately.

22

The prevailing view among developmental scientists is that people are active contributors to their own development. People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and construct their own development through their interactions. Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning. By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development."

01 | According to the passage, what role do individuals play in their own development?

① They passively receive influences from their environment.
② They are solely influenced by genetic factors.
③ They actively contribute to and influence their own development.
④ They only influence their development during adulthood.

02 | How does the passage illustrate the concept of infants influencing their own development?

① By explaining how infants can choose their caregivers.
② By describing how infants' smiles can elicit responses from adults.
③ By showing how infants are unaffected by their environment.
④ By stating that infants are unable to interact with their surroundings.

03 | What is the significance of the phrase "manufacturers of their own development" in the context of the passage?

① It implies that individuals have no control over their development.
② It suggests that development is predetermined by external factors.
③ It indicates that individuals play an active role in shaping their development.
④ It means that development is solely a result of genetic inheritance.

24

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

01 | What does Plato's question about the nature of a circle illustrate about his philosophical views?

① Circles are fundamental shapes in nature.
② Physical objects are perfect and unchanging.
③ The physical world is a flawed reflection of a deeper reality.
④ Plato was primarily concerned with the aesthetics of shapes.

02 | According to Plato, why are physical circles not considered perfect?

① They are always changing and decaying.
② They are not useful in practical applications.
③ They can be destroyed easily.
④ They are too complex to understand fully.

03 | What are "Forms" or "universals" in Plato's philosophy?

① Imperfect physical objects we encounter in daily life.
② Ideas that exist only in the human mind.
③ Perfect and unchanging realities that exist beyond our sensory perception.
④ Scientific theories about physical objects.

26

Individuals who perform at a high level in their profession often have instant credibility with others. People admire them, they want to be like them, and they feel connected to them. When they speak, others listen — even if the area of their skill has nothing to do with the advice they give. Think about a world-famous basketball player. He has made more money from endorsements than he ever did playing basketball. Is it because of his knowledge of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool. And when an actor tells us we should drive a certain car, we don't listen because of his expertise on engines. We listen because we admire his talent. Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you because of it.

01 | What is the primary reason people listen to a world-famous basketball player when he endorses a product?

① His extensive knowledge of the product
② His ability to connect with people
③ His skill in playing basketball
④ His expertise in marketing strategies

02 | According to the passage, why might people feel connected to high-performing individuals?

① Because they have a personal relationship with them
② Because they admire their talent and achievements
③ Because they share the same profession
④ Because they have similar levels of expertise

03 | What is the underlying message of the passage regarding the influence of excellence?

① Excellence in one area guarantees success in all areas
② High-level performers should only endorse products related to their expertise
③ Excellence in a specific field can lead to influence and connection in unrelated areas
④ People should not trust endorsements from athletes or actors

28

Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on makes you see things differently. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being shaped like television itself. That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. It is gently guiding us to see the world according to a new set of codes. The way information gets to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; that it's about surfaces and appearances.

01 | According to the passage, what does each new medium do when it is introduced?

① It replaces the previous medium entirely.
② It provides a new way to communicate with others.
③ It offers a new perspective on how we see the world.
④ It simplifies the way information is delivered.

02 | What is the underlying message of a new medium, as suggested by Marshall McLuhan?

① It is focused on the content of the medium.
② It is about the speed and efficiency of communication.
③ It is about the new set of codes it introduces.
④ It is about the historical context of the medium.

03 | How does television shape our perception of the world, according to the passage?

① It emphasizes the importance of deep analysis.
② It highlights the significance of historical events.
③ It teaches that the world is about speed and appearances.
④ It encourages a focus on interpersonal relationships.

30

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information — this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner stillness. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

01 | According to the passage, what is the mind primarily designed to do?

① Produce original works of art
② Ensure survival by defending, gathering, and analyzing information
③ Experience inner stillness and mental quietude
④ Make decisive discoveries without effort

02 | From what state do true artists and creative scientists achieve their breakthroughs, according to the passage?

① A state of intense logical analysis
② A state of competition with other minds
③ A state of no-mind or mental quietude
④ A state of storing large amounts of information

03 | What does the author identify as the main reason why most scientists are not creative?

① They lack sufficient scientific knowledge
② They do not know how to think effectively
③ They are unable to gather information
④ They do not know how to stop thinking

32

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually superior by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors. This was a real triumph for nurture over nature. Genes are turned on or off based on what is around you.

01 | What was the main purpose of the study conducted at Princeton University in 1992?

① To create a new species of mice
② To examine the effects of genetic modification on intelligence
③ To determine the impact of diet on mice
④ To study the social behavior of mice

02 | How were the genetically inferior mice treated differently from the superior mice in the study?

① They were given a special diet
② They were exposed to different lighting conditions
③ They were raised in large cages with toys and social interaction
④ They were trained to perform specific tasks

03 | What conclusion can be drawn from the results of the study regarding the nature vs. nurture debate?

① Nature is more influential than nurture
② Nurture can overcome genetic disadvantages
③ Genetic superiority is the sole determinant of intelligence
④ Environmental factors have no impact on genetic expression

34

Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

01 | What was the purpose of asking participants questions like “Why does the moon have phases?” in the study?

① To test their general knowledge
② To compare their answers with expert opinions
③ To see if they would use the internet to find answers
④ To enhance their interest in astronomy

02 | What was the main difference in the conditions set for the two groups of participants during the first part of the study?

① One group was asked easier questions than the other.
② One group could use the internet, while the other could not.
③ One group was given textbooks, while the other was not.
④ One group was tested in a controlled environment, while the other was not.

03 | According to the study, what unexpected outcome was observed among participants who used the internet in the first part?

① They felt less confident in their knowledge.
② They rated themselves as more knowledgeable, even on new questions.
③ They performed better on the second set of questions.
④ They showed no interest in the second set of questions.

36

Think of the brain as a city. If you were to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question. Instead, the economy emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in isolation. In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly. Just as trains bring materials and textiles into a city, which become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons. There the signals undergo processing and transformation into our conscious reality.

01 | What analogy does the author use to explain the functioning of the brain?

① The brain as a computer
② The brain as a city
③ The brain as a machine
④ The brain as a garden

02 | According to the passage, how does the economy of a city relate to the operation of the brain?

① Both are centralized in specific locations
② Both are dependent on external factors
③ Both emerge from the interaction of various elements
④ Both are unpredictable and chaotic

03 | What role do neurons play in the brain's operation, as described in the passage?

① They store memories and emotions
② They create new sensory organs
③ They transport and process electrochemical signals
④ They isolate different brain functions

38

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics. For babies, this means that they appear to pay close attention to the patterns that repeat in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

01 | What do babies construct over time according to the passage?

① Sound patterns
② Expectations about sounds
③ Language rules
④ Neural circuits

02 | How do scientists believe babies learn language?

① By mimicking adults
② Through social interaction
③ By calculating statistics
④ Via genetic predisposition

03 | What allows babies to make predictions about the meaning in patterns of sounds?

① Their ability to mimic sounds
② Their exposure to varied languages
③ Their systematic memory of sound patterns
④ Their innate intelligence

40

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can enhance their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

01 | What contrast does the passage present between athletes and non-athletes?

① Athletes are more likely to reject all forms of competition.
② Athletes are generally less likely to engage in unacceptable behavior.
③ Non-athletes receive more systematic moral education.
④ Non-athletes are more focused on winning than athletes.

02 | Why may moral reasoning and good sporting behavior decline at higher competitive levels?

① Athletes become less interested in their sports.
② Coaches stop enforcing team rules.
③ The pressure and emphasis on winning become greater.
④ Athletes have fewer opportunities to compete.

03 | According to the passage, what is necessary for athletes to develop a lasting sense of fair play?

① Avoiding competitive sports altogether
② Winning as often as possible
③ Learning to break rules strategically
④ Receiving systematic instruction from coaches

2

(A) We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem.

(B) It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems.

(C) Every possible perspective involves emphasizing certain aspects and ignoring others.

(D) Crucially, however, we can only take up one perspective at a time.

(E) Take platypuses. We might zoom in so closely to their fur that each hair appears different.

(F) Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it.

(G) We might also zoom out to the extent where it appears as a single, uniform object.

(H) We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns.

☑ 아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

Crucially, however, we can only take up one perspective at a time.

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. (①) We might also zoom out to the extent where it appears as a single, uniform object. (②) We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. (③) It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. (④) We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. (⑤) Every possible perspective involves emphasizing certain aspects and ignoring others.

4

(A) As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced.

(B) Memory makes us who we are.

(C) On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

(D) If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself.

(E) Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come.

(F) If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me.

☑ 아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come.

(A) As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced.

(B) On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

(C) Memory makes us who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me.

6

(A) In animals rewarded for noticing sound (to hunt or to avoid being hunted for example), we find much larger auditory centers in the brain.

(B) Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed.

(C) Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers.

(D) There's a lot of scientific evidence demonstrating that focused attention leads to the reshaping of the brain.

(E) The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

(F) In animals rewarded for sharp eyesight, the visual areas are larger.

아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

The point is that the physical architecture of the brain changes according to where we direct our attention and what we practice doing.

There's a lot of scientific evidence demonstrating that focused attention leads to the reshaping of the brain. (②) In animals rewarded for sharp eyesight, the visual areas are larger. (③) Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, which has to finger the strings precisely, often at very high speed. (④) Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers. (⑤)

8

(A) Giffen goods are special types of products for which the traditional law of demand does not apply.

(B) On the other hand, as rice prices increase, people consume more rice.

(C) Taking an example, rice in China is a giffen good because people tend to purchase less of it when the price falls.

(D) Instead of switching to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases.

(E) The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, change their spending pattern.

(F) The law of demand is that the demand for goods and services increases as prices fall, and the demand falls as prices increase.

☑ 아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

The law of demand is that the demand for goods and services increases as prices fall, and the demand falls as prices increase.

(A) While there are many documented cases of sudden disruptions that have had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowing down work productivity and generally increasing stress levels.

(B) For Coleridge, by coincidence, the untimely visitor came at a particularly bad time.

(C) He forgot his inspiration and left the work unfinished.

(D) Perhaps the most famous literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an unexpected guest.

(E) Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door."

(F) The costs of interruptions are well-documented.

☑ 아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

Perhaps the most famous literary example happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an unexpected guest.

The costs of interruptions are well-documented. (①) Martin Luther King Jr. lamented them when he described "that lovely poem that didn't get written because someone knocked on the door." (②) For Coleridge, by coincidence, the untimely visitor came at a particularly bad time. (③) He forgot his inspiration and left the work unfinished. (④) While there are many documented cases of sudden disruptions that have had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowing down work productivity and generally increasing stress levels. (⑤)

20

(A) Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree.

(B) The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship.

(C) People are attracted to individuals and things they cannot readily obtain.

(D) A certain level of unavailability will make you more of a mystery and a challenge.

(E) Christmas presents provide a good example of this phenomenon.

(F) An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship.

(G) When the object of desire is finally gained, the attraction for the object rapidly decreases.

(H) In the case with things, people are more attracted to a desired object because it is out of their reach.

(I) The common dating rule has scientific merit.

☑ 아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship.

People are attracted to individuals and things they cannot readily obtain. In the case with things, people are more attracted to a desired object because it is out of their reach. (①) When the object of desire is finally gained, the attraction for the object rapidly decreases. (②) Christmas presents provide a good example of this phenomenon. Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. (③) The common dating rule has scientific merit. (④) An individual should not always make himself or herself readily available to the person they are targeting for a longer-term relationship. (⑤) A certain level of unavailability will make you more of a mystery and a challenge.

22

(A) Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response.

(B) People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts.

(C) By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development."

(D) Even infants influence the world around them and construct their own development through their interactions.

(E) The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning.

(F) The prevailing view among developmental scientists is that people are active contributors to their own development.

아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

Even infants influence the world around them and construct their own development through their interactions.

The prevailing view among developmental scientists is that people are active contributors to their own development. (①) People are influenced by the physical and social contexts in which they live, but they also play a role in influencing their development by interacting with, and changing, those contexts. (②) Consider an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use "baby talk," and play with him in response. (③) The infant brings adults into close contact, making one-on-one interactions and creating opportunities for learning. (④) By engaging the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are "manufacturers of their own development." (⑤)

24

(A) They all possessed flaws, and all were subject to change and decayed with time.

(B) So how can we talk about perfect circles if we cannot actually see or touch them?

(C) He asked the question, what is a circle?

(D) However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect.

(E) Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles.

(F) Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks.

(G) Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

(H) You might indicate a particular example carved into stone or drawn in the sand.

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles.

(A) Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

(B) He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect.

(C) They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them?

26

(A) When they speak, others listen — even if the area of their skill has nothing to do with the advice they give.

(B) Think about a world-famous basketball player.

(C) Is it because of his knowledge of the products he endorses?

(D) He has made more money from endorsements than he ever did playing basketball.

(E) No. It's because of what he can do with a basketball.

(F) Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you because of it.

(G) Individuals who perform at a high level in their profession often have instant credibility with others.

(H) And when an actor tells us we should drive a certain car, we don't listen because of his expertise on engines. We listen because we admire his talent.

(I) The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool.

(J) People admire them, they want to be like them, and they feel connected to them.

32

(A) Genes are turned on or off based on what is around you.

(B) The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor.

(C) Glutamate is a brain chemical that is necessary in learning.

(D) At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors.

(E) The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction.

(F) In a study at Princeton University in 1992, research scientists looked at two different groups of mice.

(G) This was a real triumph for nurture over nature.

(H) One group was made intellectually superior by modifying the gene for the glutamate receptor.

☑ 아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

One group was made intellectually superior by modifying the gene for the glutamate receptor.

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. (①) Glutamate is a brain chemical that is necessary in learning. The other group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. (②) The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. (③) At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as well as their genetic superiors. (④) This was a real triumph for nurture over nature. (⑤) Genes are turned on or off based on what is around you.

34

(A) Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?"

(B) Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so.

(C) You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions.

(D) These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't.

(E) But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for.

(F) The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

(G) Participants in a study were asked to answer questions like “Why does the moon have phases?”

☑ 아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Participants in a study were asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so.

(A) These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had by absolutely no advantage over those who hadn't.

(B) But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

(C) You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions.

(D) Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?"

36

(A) In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly.

(B) There the signals undergo processing and transformation into our conscious reality.

(C) Instead, the economy emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers.

(D) And so it is with the brain's operation: it doesn't happen in one spot.

(E) Just as in a city, no neighborhood of the brain operates in isolation.

(F) Just as trains bring materials and textiles into a city, which become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons.

(G) If you were to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question.

(H) Think of the brain as a city.

☑ 아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Think of the brain as a city.

(A) In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly. Just as trains bring materials and textiles into a city, which become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons. There the signals undergo processing and transformation into our conscious reality.

(B) And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in isolation.

(C) If you were to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question. Instead, the economy emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers.

38

(A) For babies, this means that they appear to pay close attention to the patterns that repeat in language.

(B) They hold in memory the sound patterns that occur on a regular basis.

(C) They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound."

(D) This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

(E) Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics.

(F) They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch.

(G) Over time, babies construct expectations about what sounds they will hear when.

☑ 아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis.

(A) This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

(B) For babies, this means that they appear to pay close attention to the patterns that repeat in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch.

01. Anthropologist Gregory Bateson s_____ that we tend to u_____ the w_____ by f_____ in on p_____ f_____ within it.

인류학자 Gregory Bateson은 우리가 세상 안의 특정한 특징에 초점을 맞춤으로써 세상을 이해하는 경향이 있다고 제안한다.

02. Take platypuses. We might z_____ i_____ so c_____ to their f_____ that each h_____ a_____ d_____.

오리너구리를 예로 들어 보자. 우리가 그들의 털을 매우 가까이 확대하면 각 가닥이 다르게 보인다.

03. We might also z_____ o_____ to the extent where it a_____ as a s_____, u_____ o_____.

우리는 또한 그것이 하나의 동일한 개체로 보이는 정도까지 축소할 수도 있다.

04. We might t_____ the platypus as an i_____, or we might t_____ it as part of a l_____ u_____ such as a s_____ or an e_____.

우리는 오리너구리를 개체로 취급할 수도 있고 종 또는 생태계와 같이 더 큰 단위의 일부로 취급할 수도 있다.

05. It's possible to m_____ between many of these p_____, although we may n_____ some a_____ t_____ and s_____ to zoom in on i_____ p_____ of h_____ or zoom out to e_____ e_____.

비록 개별 머리카락을 확대하거나 전체 생태계로 축소하기 위해 몇 가지 추가 도구와 기술이 필요할지도 모르지만, 이러한 많은 관점 사이를 이동하는 것은 가능하다.

06. Crucially, however, we can only t_____ up one p_____ at a time.

그러나 결정적으로 우리는 한 번에 하나의 관점만 취할 수 있다.

07. We can p_____ a_____ t_____ the v_____ b_____ of individual animals, l_____ at what u_____ them into a s_____ s_____, or l_____ at them as p_____ of b_____ e_____ p_____.

우리는 개별 동물의 다양한 행동에 주의를 기울일 수 있고, 그들을 단일 종으로 통합하는 것을 살펴볼 수도 있고, 더 큰 생태학적 패턴의 일부로서 그들을 살펴볼 수도 있다.

08. Every possible p_____ i_____ e_____ c_____ a_____ and i_____ others.

가능한 모든 관점은 특정 측면을 강조하고 다른 측면을 외면하는 것을 포함한다.

4

01. Not only does m_____ u_____ our a_____ to t_____ at all, it d_____ the_____ c_____ of our e_____ and h_____ we p_____ them for years to come.

기억이 어쨌든 사고하는 우리의 능력의 기반이 될 뿐만 아니라 그것은 우리의 경험의 내용과 다가올 수년간 우리가 그것을 보존하는 방식을 규정한다.

02. M_____ m_____ us w_____ we a_____.

기억은 우리를 우리가 누구인지로 만들어 준다.

03. If I were to s_____ from heart failure and d_____ upon an a_____ h_____, I would be_____ n_____ l_____ m_____.

만약 내가 심장 부전을 앓고 인공 심장에 의존한다 해도 나는 역시 여느 때의 나일 것이다.

04. If I l_____ an a_____ in an accident and h_____ it r_____ with an artificial arm, I would still b_____ e_____ m_____.

만약 내가 사고로 한 팔을 잃고 그것을 인공 팔로 교체한다 해도 나는 여전히 본질적으로 '나'일 것이다.

05. As long as m_____ m_____ and m_____ r_____ i_____, I will c_____ to b_____ the s_____ p_____, no matter which part of my b_____ (other than the_____ b_____) is r_____.

나의 정신과 기억이 손상되지 않은 한, 나의 신체의 (뇌를 제외한) 어떤 부분이 교체될지라도 나는 계속 같은 사람일 것이다.

06. On the other hand, when someone s_____ from advanced Alzheimer's disease and his m_____ _____ f_____, people often s_____ that he "is not h_____ anymore," or that it is as if the person "is no longer there," though his b_____ r_____ u_____.

반면 누군가 후기의 알츠하이머병을 앓고 그의 기억이 흐려진다면, 비록 그의 신체는 변하지 않은 채로 남아 있음에도 불구하고 사람들은 종종 그는 '더 이상 여느 때의 그가 아니라고' 혹은 마치 그 사람이 '더 이상 그곳에 없는' 것 같다고 말한다.

01. If you want the c_____ that comes from a_____ what you s_____ o_____ to do each day, then it's i_____ to u_____ how l_____ things are going to_____ t_____.

만약 매일 하고자 착수하는 일을 성취함으로써 얻게 되는 자신감을 원한다면 일이 얼마나 시간이 걸릴지 아는 것이 중요하다.

02. O_____ about what can be a_____ within a certain t_____ f_____ is a_____ p_____.

어떤 특정 기간 내에 성취될 수 있는 것에 대한 지나친 낙관주의는 문제다.

03. So w_____ o_____ it.

그러므로 그것을 개선하려고 노력하라.

04. Make a p_____ of e_____ the a_____ of time n_____ alongside items on your 'things to do' list, and l_____ by e_____ when tasks take a g_____ or_____ l_____ time than e_____.

'해야 할 일' 목록에 있는 항목과 함께, 필요한 시간의 양을 추산하는 것을 습관화하고, 과제가 언제 예상보다 더 많은 시간 또는 더 적은 시간이 걸리는지 경험을 통해 배우라.

05. Give a_____ also to f_____ the task to the a_____ time.

그 이용 가능한 시간에 과제를 맞추는 것에도 또한 주의를 기울이라.

06. There are some tasks that you can only s_____ a_____ if you have a s_____ amount of time a_____.

이용할 수 있는 시간의 양이 상당히 있어야만 시작할 수 있는 몇몇 과제가 있다.

07. There is n_____ p_____ in trying to g_____ u_____ for such a task when you only have a s_____ p_____ available.

이용할 수 있는 시간이 짧은 시간밖에 없을 때 그런 과제를 위해 준비를 갖추려고 애쓰는 것은 무의미하다.

08. So s_____ the time you need for the l_____ tasks and p_____ the s_____ tasks into the s_____ moments in b_____.

그러므로 시간이 더 오래 걸리는 과제를 위해 필요한 시간을 계획하고, 그 사이의 남는 시간에 시간이 짧게 걸리는 과제를 배치하라.

12

01. R_____ the number of items c_____ can buy b_____ s_____.

고객이 구입할 수 있는 품목의 개수를 제한하는 것은 매출을 증가시킨다.

02. Brian Wansink, Professor of Marketing at Cornell University, i_____ the e_____ of this tactic in 1998.

Cornell University의 마케팅 교수인 Brian Wansink는 1998년에 이 전략의 효과를 조사했다.

03. He persuaded three supermarkets in Sioux City, Iowa, to o_____ Campbell's soup at a small d_____: 79 cents rather than 89 cents.

그는 Iowa주 Sioux City에 있는 세 개의 슈퍼마켓이 Campbell의 수프를 약간 할인하여 제공하도록 설득했다: 89센트가 아닌 79센트로.

04. The d_____ soup was s_____ in one of three conditions: a c_____, where there was n_____ l_____ on the volume of purchases, or two t_____, where customers were l_____ to either four or twelve cans.

할인된 수프는 세 가지 조건 중 하나의 조건으로 판매되었다: 구매량에 제한이 없는 하나의 대조군, 또는 고객이 4개의 캔으로 제한되거나 12개의 캔으로 제한되는 두 개의 실험군.

05. In the u_____ c_____ shoppers b_____ 3.3 cans on average, whereas in the s_____ c_____, when there was a l_____, they b_____ 5.3 on average.

무제한 조건에서 구매자들은 평균 3.3캔을 구입했던 반면, 제한이 있던 희소 조건에서는, 평균 5.3캔을 구입했다.

06. This suggests s_____ e_____ s_____.

이것은 희소성이 판매를 장려한다는 것을 보여준다.

07. The findings are particularly s_____ because the test t_____ p_____ in a supermarket with g_____ shoppers.

이 실험은 진짜 구매자들이 있는 슈퍼마켓에서 진행되었기 때문에 그 결과는 특히 타당하다.

08. It didn't r_____ on c_____ d_____, nor was it h_____ in a l_____ where consumers might b_____ d_____.

그것은 주장된 데이터에 의존하지 않았고, 소비자들이 다르게 행동할지도 모르는 실험실에서 이루어진 것도 아니었다.

C2 빈칸 어휘 1 — 2 — 3

14

01. A k_____ to e_____ and a_____ is p_____ s_____ with r_____ t_____ they will be i_____ in.

참여와 성취의 핵심은 학생들에게 그들이 관심 있어 할 적절한 글을 제공하는 것이다.

02. My s_____ w_____ and my t_____ have been deeply i_____ by the w_____ of Rosalie Fink.

나의 학문적인 연구와 나의 수업은 Rosalie Fink의 연구에 깊이 영향을 받아왔다.

03. She i_____ twelve adults who were highly s_____ in their work, i_____ a p_____, a b_____, and a c_____ C_____.

그녀는 물리학자, 생화학자 그리고 회사의 최고 경영자를 포함해 그들의 직업에서 매우 성공한 열두 명의 성인들과 면담했다.

04. All of them had d_____ and had had s_____ p_____ with r_____ t_____ their s_____ y_____.

그들 모두가 난독증이 있었고 그들의 학령기 내내 읽기에 상당한 문제를 겪어 왔다.

05. While she e_____ to f_____ that they had a_____ r_____ and d_____ w_____ to b_____ it or c_____ with other s_____ for l_____, she f_____ the o_____.

그녀는 그들이 학습에 있어 읽기를 피했고 그것을 우회하거나 다른 전략들로 보완할 방법을 발견했을 것이라고 알아낼 것을 예상했으나, 정반대를 알아냈다.

06. "To my surprise, I f_____ that these d_____ were e_____ r_____... they r_____ a_____ r_____.

"놀랍게도, 나는 난독증이 있는 이런 사람들이 열성적인 독자인 것을... 그들이 좀처럼 읽기를 피하지 않는 것을 알아냈다.

07. On the contrary, they s_____ o_____ b_____."

이에 반하여, 그들은 책을 찾았다."

08. The pattern Fink d_____ was that all of her s_____ had been p_____ in some p_____ i_____.

Fink가 발견한 패턴은 그녀의 실험 대상자 모두가 어떤 개인적인 관심사에 열정적이었다는 것이었다.

09. The areas of i_____ i_____ r_____, m_____, b_____, s_____, h_____, and b_____.

관심 분야는 종교, 수학, 상업, 과학, 역사 그리고 생물학을 포함했다.

10. What m_____ was that they r_____ v_____ to f_____ o_____ m_____.

중요한 것은 그들이 더 많이 알아내기 위해 탐욕스럽게 읽었다는 것이다.

16

01. One of the most s_____ c_____ of a s_____ a_____ or p_____ is that they do not r_____ normally to e_____ s_____.

잠을 자고 있는 동물이나 사람의 가장 두드러진 특징 중 하나는 그들이 환경의 자극에 정상적으로 반응하지 않는다는 것이다.

02. If you o_____ the e_____ of a s_____ m_____ the e_____ will not s_____ normally — they are f_____ b_____.

만약 당신이 잠을 자고 있는 포유류의 눈꺼풀을 열면, 그 눈은 정상적으로 볼 수 없을 것인데, 즉 그 눈은 기능적으로는 실명 상태이다.

03. Some v_____ i_____ apparently g_____ in, but it is not normally p_____ as it is s_____ or w_____; same with the other s_____ s_____.

어떤 시각적 정보는 명백히 눈으로 들어오지만, 그것은 짧아지거나 약화되어서 정상적으로 처리되지 않는데, 이는 다른 감각 체계도 마찬가지다.

04. S_____ are r_____ but not p_____ n_____ and they f_____ to w_____ the i_____.

자극은 등록되지만 정상적으로 처리되지 않고 사람을 깨우는 데 실패한다.

05. P_____ d_____ probably s_____ the f_____ of p_____ s_____, so some a_____ do not c_____ it as p_____ of the d_____ of s_____ i_____.

지각 이탈은 추측하건대 수면을 보호하는 기능을 제공해서 어떤 저자는 그것을 수면 자체의 정의의 일부로 여기지 않는다.

06. But as s_____ would be i_____ w_____ it, it s_____ e_____ to its d_____.

그러나 수면이 그것 없이는 불가능하기 때문에 그것(지각 이탈)은 그것(수면)의 정의에 필수적인 것으로 보여진다.

07. Nevertheless, many a_____ (including humans) u_____ the i_____ s_____ of d_____ to d_____ some b_____ of s_____ without total p_____ d_____.

그럼에도 (인간을 포함한) 많은 동물은 완전한 지각 이탈 없이 수면의 일부 이득을 끌어내기 위해서 졸음이라는 중간 상태를 이용한다.

18

01. The c_____ of i_____ are w_____.

방해로 인한 대가는 잘 기록되어 있다.

02. Martin Luther King Jr. l_____ them when he d_____ "that lovely poem that didn't g_____ w_____ because someone k_____ on the door."

Martin Luther King Jr.는 "누군가 문을 두드리는 바람에 쓰여지지 못한 사랑스러운 시"를 묘사하며 이를 슬퍼했다.

03. Perhaps the most famous literary example h_____ in 1797 when Samuel Taylor Coleridge started w_____ his poem Kubla Khan from a dream he had but then was v_____ by an u_____ g_____.

아마도 가장 유명한 문학적 사례는 1797년 Samuel Taylor Coleridge가 꿈을 꾸고 Kubla Khan이라는 시를 쓰기 시작했는데 뜻밖의 손님이 찾아왔을 때 일어났던 일일 것이다.

04. For Coleridge, by coincidence, the untimely visitor c_____ at a particularly b_____ time.

공교롭게도 Coleridge에게 이 불청객은 특히 좋지 않은 시기에 찾아왔다.

05. He f_____ his i_____ and l_____ the work u_____.

그는 영감을 잊고 작품을 미완성으로 남겼다.

06. While there are many d_____ cases of s_____ d_____ that have had s_____ c_____ for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also i_____ most of us in our everyday lives, s_____ d_____ w_____ p_____ and generally i_____ s_____ l_____.

의사, 간호사, 관제실 운영자, 주식 거래자, 조종사와 같은 중요한 역할을 담당하는 전문가들에게 심각한 결과를 초래한 갑작스러운 방해의 사례가 많이 기록되어 있지만, 갑작스러운 방해는 일상생활에서 대부분의 사람들에게도 영향을 미쳐 업무 생산성을 떨어뜨리며 일반적으로 스트레스 수준을 높인다.

20

01. People are a_____ to individuals and things they cannot readily o_____.

사람들은 자신들이 쉽게 얻을 수 없는 사람이나 사물에 이끌린다.

02. In the case with things, people are more a_____ to a d_____ object because it is out of their reach.

사물의 경우, 사람들은 원하는 물건이 그들의 손에 닿지 않기 때문에 그것에 더 이끌린다.

03. When the object of desire is finally g_____, the attraction for the object rapidly d_____.

원하는 물건이 마침내 얻어지면, 그 물건에 대한 매력은 빠르게 감소한다.

04. Christmas presents p_____ a good example of this phenomenon.

크리스마스 선물이 이러한 현상의 좋은 예를 제공한다.

05. Toys children wanted all year long a_____ t_____ a_____ several days after they a_____ t_____ from gift boxes under the tree.

아이들이 일 년 내내 원했던 장난감은 트리 아래 선물 상자에서 꺼내진 후 며칠 뒤에 버려진다.

06. The phenomenon also holds t_____ for human interaction, particularly in the e_____ stages of a d_____ relationship.

그 현상은 사람들의 상호 작용, 특히 관계가 형성되는 초기 단계에도 유효하다.

07. The common dating rule has scientific m_____.

일반적인 데이트 규칙에는 과학적 가치가 있다.

08. An individual should not always make himself or herself readily a_____ to the person they are t_____ for a longer-term relationship.

사람은 장기적인 관계를 목표로 하고 있는 사람에게 자기 자신을 항상 쉽게 만날 수 있게 해서는 안 된다.

09. A certain level of u_____ will make you more of a m_____ and a c_____.

일정 정도의 만날 수 없음이 여러분을 더욱 신비롭고 도전적인 존재로 만들어 줄 것이다.

C2 빈칸 어휘 ① ② ③

22

01. The prevailing view among developmental scientists is that people are a_____ c_____ to their own d_____.

발달 과학자들 사이에서 지배적인 견해는 사람들이 그들 자신의 발달에 능동적인 기여자라는 것이다.

02. People are i_____ by the p_____ and s_____ c_____ in which they l_____, but they also play a r_____ in i_____ their d_____ by i_____ with, and c_____, those contexts.

사람들은 그들이 사는 물리적인 그리고 사회적인 환경의 영향을 받지만, 그들은 또한 그 환경들과 상호 작용하고, 그리고 변화시킴으로써, 그들의 발달에 영향을 주는 역할을 한다.

03. Even i_____ i_____ the world around them and c_____ their own d_____ through their i_____.

심지어 유아들도 그들 주변의 세상에 영향을 주고 상호 작용을 통해서 그들 자신의 발달을 구성한다.

04. C_____ an infant who s_____ at each adult he s_____; he i_____ his world because adults are likely to s_____, u_____ "baby talk," and p_____ with him in response.

그가 바라보는 각각의 어른에게 미소 짓는 유아를 생각해 보라. (그에) 반응하여, 어른들이 미소 짓고, "아기 말"을 사용하고, 그리고 그와 함께 놀아줄 것이기 때문에 그는 자신의 세상에 영향을 준다.

05. The infant b_____ adults into c_____ c_____, m_____ one-on-one interactions and c_____ opportunities for learning.

그 유아는 어른들을 친밀한 연결로 끌어들여서, 일대일 상호작용을 하고 학습의 기회를 만든다.

06. By e_____ the world around them, t_____, being c_____, and i_____ with people, objects, and the world around them, individuals of all ages are "m_____ of their o_____ d_____."

그들 주변 세상의 관심을 끌고, 생각하고, 호기심을 가지고, 그리고 그들 주변의 사람들, 사물들, 그리고 세상과 상호 작용함으로써, 모든 연령대의 개인들은 "그들 자신의 발달을 생산하는 사람"이다.

24

01. Plato's realism i_____ all aspects of e_____ but is most easily e_____ by c_____ the nature of m_____ and g_____ o_____ such as c_____.

플라톤의 실재론은 경험의 모든 측면을 포함하지만, 원과 같은 수학적이고 기하학적인 대상의 특성을 고려함으로써 가장 쉽게 설명된다.

02. He a_____ the q_____, w_____ is a c_____?

그는 '원이란 무엇인가'라는 질문을 했다.

03. You might i_____ a particular example c_____ into s_____ or d_____ in the s_____.

여러분은 돌에 새겨져 있거나 모래에 그려진 특정한 예를 가리킬 수 있다.

04. However, Plato would p_____ o_____ that, if you l_____ c_____ enough, you would s_____ that neither it, nor indeed any p_____ c_____, was p_____.

그러나 플라톤은 여러분이 충분히 면밀히 관찰한다면, 여러분이 그 어느 것도, 진정 어떤 물리적인 원도 완벽하지 않다는 것을 알게 될 것이라고 지적할 것이다.

05. They all p_____ f_____, and all were s_____ to c_____ and d_____ with t_____.

그것들 모두는 결함을 가지고 있었고, 모두 변화의 영향을 받고 시간이 지남에 따라 쇠하였다.

06. So how can we t_____ about p_____ c_____ if we cannot actually s_____ or t_____ them?

그렇다면, 우리가 완벽한 원을 실제로 보거나 만질 수 없다면, 그것에 대해 어떻게 이야기할 수 있을까?

07. Plato's e_____ a_____ was that the world we see is a p_____ r_____ of a d_____ u_____ reality of F_____, or u_____, where p_____ c_____ c_____ p_____ m_____ in p_____ c_____ around p_____ r_____.

플라톤의 비범한 대답은 우리가 보는 세상이 완벽한 고양이가 완벽한 암석 주변에서 완벽한 원을 그리며 완벽한 쥐를 쫓는 '형상' 또는 '보편자'라는 더 깊은 보이지 않는 실재의 불충분한 반영물이라는 것이다.

08. Plato believed that the F_____ or universals are the true reality that e_____ in an invisible but perfect world beyond our senses.

플라톤은 '형상' 또는 '보편자'가 보이지 않지만 우리의 감각을 넘어선 완벽한 세계에 존재하는 진정한 실재라고 믿었다.

C2 빈칸 어휘 1 — 2 — 3

26

01. Individuals who p_____ at a h_____ l_____ in their p_____ often have i_____ c_____ with others.

자신의 직업에서 높은 수준으로 수행하는 사람들은 흔히 다른 사람들에게 즉각적인 신뢰를 얻는다.

02. People a_____ them, they w_____ to be like them, and they f_____ c_____ to them.

사람들은 그들을 존경하고, 그들처럼 되고 싶어 하고, 그들과 연결되어 있다고 느낀다.

03. When they s_____, others l_____ — even if the area of their skill has n_____ to do with the a_____ they g_____.

그들이 말할 때, 다른 사람들은 비록 그들의 기술 분야가 그들이 주는 조언과 전혀 관련이 없을지라도 경청한다.

04. Think about a world-famous basketball player.

세계적으로 유명한 농구 선수에 대해 생각해 보라.

05. He has m_____ more money from e_____ than he ever did playing basketball.

그는 그가 농구를 하면서 그간 벌었던 것보다 광고로부터 더 많은 돈을 벌었다.

06. Is it because of his k_____ of the products he e_____?

그것이 그가 광고하는 제품에 대한 그의 지식 때문일까?

07. No. It's because of what he can do with a b_____.

아니다. 그것은 그가 농구로 할 수 있는 것 때문이다.

08. The s_____ can be said of an Olympic medalist swimmer.

올림픽 메달리스트 수영 선수도 마찬가지이다.

09. People l_____ to him because of what he can do in the p_____.

사람들은 그가 수영장에서 할 수 있는 것 때문에 그의 말을 경청한다.

10. And when an actor tells us we should d_____ a c_____ car, we don't listen because of his e_____ on engines.

그리고 어떤 배우가 우리에게 특정 자동차를 운전해야 한다고 말할 때, 우리는 엔진에 대한 그의 전문 지식 때문에 경청하는 것은 아니다.

11. We listen because we a_____ his t_____.

우리는 그의 재능을 존경하기 때문에 경청한다.

12. E_____ c_____.

탁월함이 연결된다.

13. If you p_____ a h_____ l_____ of a_____ in an area, others may d_____ to c_____ with you because of it.

만약 당신이 어떤 분야에서 높은 수준의 능력을 갖고 있다면, 다른 사람들은 그것 때문에 당신과 연결되기를 원할 수도 있다.

28

01. Every time a n_____ m_____ c_____ along — whether it's the invention of the printed book, or TV, or SNS — and you s_____ to u_____ it, it's like you are p_____ on a n_____ kind of goggles, with their own special colors and lenses.

인쇄된 책의 발명이든 텔레비전의 발명이든 SNS의 발명이든, 새로운 매체가 나타나 여러분이 그것을 쓰기 시작할 때마다 여러분은 고유의 색깔과 렌즈를 가진 새 고글을 쓰는 것과 같다.

02. Each set of goggles you put on m_____ you s_____ things d_____.

여러분이 쓰는 각각의 고글은 세상을 다른 방식으로 바라보게 한다.

03. So when you start to w_____ television, before you a_____ the message of any p_____ TV show — whether it's Wheel of Fortune or The Wire — you start to s_____ the world as being s_____ like television itself.

그러므로 여러분이 텔레비전을 보기 시작하면, 그것이 Wheel of Fortune이든 The Wire든, 특정 텔레비전 프로그램의 메시지를 흡수하기 이전에 이미 세상을 텔레비전 그 자체처럼 형성된 것으로 바라보게 된다.

04. That's why Marshall McLuhan said that every time a n_____ m_____ c_____ along — a n_____ w_____ for h_____ to c_____ — it has b_____ in it a m_____.

이러한 이유로 Marshall McLuhan이 새로운 매체, 즉, 인간이 의사소통하는 새로운 방식이 나타날 때마다 그 안에 메시지가 담겨 있다고 말한 것이다.

05. It is gently g_____ us to s_____ the world a_____ to a n_____ s_____ of codes.

새로운 매체는 자연스럽게 우리가 새로운 일련의 방식에 따라 세상을 바라보게 한다.

06. The w_____ i_____ g_____ to you, McLuhan argued, is more i_____ than the information itself.

McLuhan은 정보가 여러분에게 도달하는 방식이 정보 자체보다 더 중요하다고 주장했다.

07. TV t_____ you that the world is f_____; that it's about s_____ and a_____.

텔레비전은 우리에게 세상은 빠르고, 중요한 것은 표면과 겉모습이라고 가르친다.

C2 빈칸 어휘 1 — 2 — 3

30

01. The mind is essentially a s_____ machine.

생각은 본질적으로 생존 기계이다.

02. Attack and defense against other minds, gathering, storing, and analyzing information — this is what it is g_____ at, but it is not at all c_____.

정보를 수집하고, 저장하고, 분석하며, 다른 생각에 대한 공격과 수비 — 이것은 생각이 잘 하는 것이지만, 전혀 창의적이지는 않다.

03. All true artists create from a place of no-mind, from i_____ stillness.

모든 진정한 예술가들은 생각이 없는 상태, 즉 내적인 고요함 속에서 창작을 한다.

04. Even great scientists have reported that their c_____ breakthroughs came at a time of m_____ quietude.

심지어 위대한 과학자들조차도 그들의 창의적인 돌파구는 마음의 정적의 시간에서 생겨났다고 말했다.

05. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to f_____ o_____ their working methods, was that thinking "plays only a s_____ part in the brief, d_____ phase of the c_____ act itself."

아인슈타인을 포함한 미국의 가장 유명한 수학자들을 대상으로 그들의 작업 방식을 알아내기 위한 전국적인 조사의 놀라운 결과는 생각은 "창의적인 행동의 짧고, 결정적인 단계에서 단지 부수적인 역할만 할 뿐이다."라는 것이다.

06. So I would say that the simple reason why the m_____ of scientists are not c_____ is not because they don't know how to think, but because they don't know how to stop thinking!

그래서 나는 대다수의 과학자들이 창의적이지 않은 단순한 이유는 그들이 생각하는 방법을 몰라서가 아니라 생각을 멈추는 방법을 모르기 때문이라고 말하고 싶다.

32

01. In a study at Princeton University in 1992, research scientists l_____ at two different groups of mice.

1992년 프린스턴 대학의 한 연구에서, 연구 과학자들은 두 개의 다른 쥐 집단을 관찰했다.

02. One group was m_____ i_____ s_____ by m_____ the gene for the glutamate receptor.

한 집단은 글루타민산염 수용체에 대한 유전자를 변형함으로써 지적으로 우월하게 만들어졌다.

03. Glutamate is a brain chemical that is n_____ in l_____.

글루타민산염은 학습에 필수적인 뇌 화학 물질이다.

04. The other group was g_____ m_____ to be i_____ i_____, also done by m_____ the gene for the glutamate receptor.

다른 집단도 역시 글루타민산염 수용체에 대한 유전자를 변형함으로써, 지적으로 열등하도록 유전적으로 조작되었다.

05. The s_____ mice were then r_____ in s_____ cages, while the i_____ mice were r_____ in l_____ cages with toys and exercise wheels and with lots of social interaction.

그 후 똑똑한 쥐들은 표준 우리에서 길러졌고, 반면에 열등한 쥐들은 장난감과 운동용 쳇바퀴가 있고 사회적 상호작용이 많은 큰 우리에서 길러졌다.

06. At the end of the study, although the intellectually i_____ mice were g_____ h_____, they were able to p_____ just as well as their g_____ s_____.

연구가 끝날 무렵, 비록 지적 능력이 떨어지는 쥐들이 유전적으로 장애가 있었지만, 그들은 그들의 유전적인 우월군들만큼 잘 수행할 수 있었다.

07. This was a real triumph for n_____ over n_____.

이것은 천성(선천적 성질)에 대한 양육(후천적 환경)의 진정한 승리였다.

08. Genes are t_____ on or off b_____ on what is around you.

유전자는 여러분 주변에 있는 것에 따라 작동하거나 멈춘다.

C2 빈칸 어휘 1 — 2 — 3

34

01. P_____ in a study were a_____ to a_____ q_____ like "W_____ does the m_____ have p_____?"

한 연구의 참가자들이 '달은 왜 상을 가지고 있을까'와 같은 질문들에 답하도록 요청받았다.

02. H_____ the p_____ were t_____ to s_____ for the a_____ on the internet, while the other half weren't a_____ to do so.

참가자의 절반은 인터넷에서 답을 검색하라는 말을 들었고 나머지 절반은 그렇게 하도록 허용되지 않았다.

03. Then, in the second part of the study, all of the p_____ were p_____ with a new set of q_____, such as "W_____ does Swiss cheese have h_____?"

그 다음, 연구의 두 번째 단계에서 모든 참가자는 '스위스 치즈에는 왜 구멍이 있을까'와 같은 일련의 새로운 질문들을 제시받았다.

04. These q_____ were u_____ to the ones a_____ during the f_____ p_____ of the study, so p_____ who u_____ the i_____ had a_____ no a_____ over those who h_____.

이 질문들은 연구의 첫 번째 단계에서 질문받았던 것들과는 관련이 없어서 인터넷을 사용한 참가자들은 그러지 않은 참가자들보다 이점이 전혀 없었다.

05. You would t_____ that both sets of p_____ would be e_____ s_____ or u_____ about how well they could a_____ the n_____ q_____.

여러분은 두 집단의 참가자들이 새로운 질문들에 얼마나 잘 대답할 수 있을지에 대해 동일한 정도로 확신하거나 확신하지 못할 것으로 생각할 것이다.

06. But those who u_____ the i_____ in the f_____ part of the study r_____ t_____ as more k_____ than those who h_____, even about q_____ they hadn't s_____ online for.

그러나 연구의 첫 번째 단계에서 인터넷을 사용했던 참가자들은 자신이 온라인에서 검색하지 않았던 질문들에 대해서조차 그러지 않았던 참가자들보다 스스로가 더 많이 알고 있다고 평가했다.

07. The study s_____ that h_____ a_____ to u_____ i_____ was e_____ to p_____ u_____ their i_____ c_____.

이 연구는 관련 없는 정보에 접근하는 것이 그들의 지적 자신감을 부풀리기에 충분했다는 것을 시사한다.

36

01. Think of the b_____ as a c_____.

뇌를 도시라고 생각해보라.

02. If you were to l_____ o_____ over a city and a_____ "where is the e_____ l_____?" you'd see there's no g_____ a_____ to the question.

만약 당신이 도시를 내다보며 "경제가 어디에 위치해 있나요?"라고 묻는다면 그 질문에 대한 좋은 답이 없다는 것을 알게 될 것이다.

03. Instead, the e_____ e_____ from the i_____ of all the elements — from the s_____ and the b_____ to the m_____ and the c_____.

대신, 경제는 상점과 은행에서 상인과 고객에 이르기까지 모든 요소의 상호 작용으로부터 나타난다.

04. And so it is with the brain's o_____: it doesn't h_____ in o_____ s_____.

그리고 그것은 뇌의 작동도 그러하다: 그것은 한 곳에서 일어나지 않는다.

05. Just as in a city, no neighborhood of the brain o_____ in i_____.

도시에서처럼, 뇌의 어떤 지역도 독립적으로 작동하지 않는다.

06. In brains and in cities, everything e_____ from the i_____ between residents, at all scales, locally and distantly.

뇌와 도시 안에서, 모든 것은, 모든 규모에서, 근거리에서든 원거리에서든, 거주자들 간의 상호 작용으로부터 나타난다.

07. Just as trains b_____ materials and textiles into a city, which become p_____ into the economy, so the r_____ electrochemical s_____ from sensory organs are t_____ along superhighways of neurons.

기차가 자재와 직물을 도시로 들여오고, 그것이 경제 속으로 처리되는 것처럼, 감각 기관으로부터의 가공되지 않은 전기화학적 신호는 뉴런의 초고속도로를 따라서 전해진다.

08. There the s_____ u_____ p_____ and t_____ into our c_____ r_____.

거기서 신호는 처리와 우리의 의식적인 현실로 변형을 겪는다.

38

01. Over time, b_____ c_____ e_____ about w_____ s_____ they will_____ h_____ w_____.

시간이 지나면서 아기는 자신이 어떤 소리를 언제 들을지에 대한 기대를 형성한다.

02. They h_____ in m_____ the s_____ p_____ that o_____ on a r_____ b_____.

그들은 규칙적으로 발생하는 소리 패턴을 기억한다.

03. They m_____ h_____ like, "If I h_____ this s_____ f_____, it p_____ will be f_____ by that sound."

그들은 '내가 '이' 소리를 먼저 들으면 그것에 아마도 '저' 소리가 따라올 것이다'와 같은 가설을 세운다.

04. S_____ c_____ that much of b_____' s_____ in learning language is due to their_____ a_____ to c_____ s_____.

과학자들은 언어를 배우는 아기의 기술의 상당 부분이 그들의 통계를 계산하는 능력 때문이라고 결론짓는다.

05. For babies, this m_____ that they a_____ to p_____ c_____ a_____ to the_____ p_____ that r_____ in language.

아기에게 있어 이것은 그들이 언어에서 반복되는 패턴에 세심한 주의를 기울이는 것처럼 보인다는 것을 의미한다.

06. They r_____, in a systematic way, h_____ o_____ sounds o_____, in w_____ o_____, with w_____ i_____, and with w_____ c_____ of pitch.

그들은 소리가 얼마나 자주, 어떤 순서로, 어떤 간격으로 그리고 어떤 음조의 변화를 가지고 발생하는지를 체계적인 방식으로 기억한다.

07. This m_____ s_____ a_____ them to t_____, within the n_____ c_____ of their brains, the f_____ of sound patterns and to u_____ this k_____ to m_____ p_____ about the m_____ in patterns of sounds.

이 기억 저장소는 그들이 자신의 뇌의 신경 회로 내에서 소리 패턴의 빈도를 추적하고, 소리 패턴의 의미에 대한 예측을 하기 위해 이 지식을 사용하도록 해 준다.

40

01. Research has **c**_____ that athletes are **l**_____ likely to participate in **u**_____ behavior than are non-athletes.

운동 선수는 선수가 아닌 사람들보다 받아들여지지 않는 행동을 덜 할 것이라고 연구는 확인했다.

02. However, moral reasoning and good sporting behavior seem to **d**_____ as athletes progress to **h**_____ competitive levels, in part because of the **i**_____ emphasis on winning.

그러나 부분적으로 승리에 대한 강조가 커지기 때문에 운동 선수가 더 높은 경쟁적 수준까지 올라감에 따라서 도덕적 분별력과 바람직한 스포츠 행위가 감소하는 것 같다.

03. Thus winning can be a **d**_____ sword in **t**_____ character development.

그래서 승리라는 것은 인성 함양을 가르치는 데 있어서 양날의 검이 될 수 있다.

04. Some athletes may want to **w**____ so much that they **l**____, **c**_____, and **b**_____ team rules.

어떤 선수는 너무나 이기려고 하다 보니 그 결과 거짓말하고 속이고 팀 규칙을 위반한다.

05. They may develop **u**_____ character traits that can **e**_____ their ability to **w**____ in the short term.

그들은 단시간에 이기고자 자신의 능력을 강화할 수 있는 바람직하지 못한 인격 특성을 계발할지 모른다.

06. However, when athletes **r**_____ the temptation to **w**____ in a **d**_____ way, they can develop **p**_____ character traits that last a lifetime.

그러나 선수가 부정한 방법으로 이기고자 하는 유혹에 저항할 때 그들은 일생 동안 지속되는 긍정적인 인격 특성을 계발할 수 있다.

07. Character is a **l**_____ behavior, and a sense of fair play **d**_____ only if coaches plan to **t**_____ those lessons **s**_____.

인성이라는 것은 학습되는 행동이며 그러한 교훈을 체계적으로 가르치고자 계획할 때만 페어 플레이 정신은 발달한다.

Anthropologist Gregory Bateson suggests **[what / that]** we tend **[to understand / understanding]** the world by **[focusing / focus]** in on particular features within **[it / them]**. **[Taking / Take]** platypuses. We might zoom in so **[close / closely]** to their fur **[what / that]** each hair **[appear / appears]** **[different / differently]**. We might also zoom out to the extent **[where / which]** it **[appears / is appeared]** as a single, uniform object. We might take the platypus as an individual, or we might **[treat / be treated]** it as part of a larger unit such as a species or an ecosystem. It's possible **[to move / move]** between **[many / much]** of these perspectives, **[despite / although]** we may need some additional tools and skills to zoom in on individual pieces of hair or **[zoom / zooms]** out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, **[looks / look]** at **[what / that]** **[unites / unite]** them into a single species, or **[looks / look]** at them as part of bigger ecological patterns. Every possible perspective **[involve / involves]** **[emphasizing / to emphasize]** certain aspects and **[ignoring / ignore]** others.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within ① it. Take platypuses. We might zoom in so ②closely to their fur that each hair appears different. We might also zoom out to the extent ③which it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, ④although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves ⑤ emphasizing certain aspects and ignoring others.

4

Not only **[memory underlies / does memory underlie]** our ability to think at all, it defines the content of our experiences and **[how / what]** we preserve them for years to come. Memory makes us who **[are we / we are]**. If I were to suffer from heart failure and **[depend / depended]** upon an artificial heart, I would **[have been / be]** no less myself. If I lost an arm in an accident and had it **[replace / replaced]** with an artificial arm, I would still **[be / have been]** **[essentially / essential]** me. As long as my mind and memories remain **[intact / intactly]**, I will continue to be the same person, no matter **[which / how]** part of my body (other than the brain) **[is replaced / replaces]**. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories **[fading / fade]**, people often say **[that / what]** he "is not himself anymore," or **[that / what]** it is as if the person "is no longer there," **[though / despite]** his body remains unchanged.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Not only ①does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us ②who we are. If I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it ③replace with an artificial arm, I would still be essentially me. As long as my mind and memories remain ④intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories ⑤fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

6

There's a lot of scientific evidence **[demonstrating / demonstrated]** **[that / what]** focused attention **[leads / leading]** to the reshaping of the brain. In animals **[rewarded / rewarding]** for **[notice / noticing]** sound (to hunt or to avoid **[to be / being]** hunted for example), we find **[much / very]** larger auditory centers in the brain. In animals **[rewarded / rewarding]** for sharp eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, **[showing / showed]** dramatic growth and expansion in regions of the cortex **[what / that]** **[represent / represents]** the left hand, **[that / which]** **[have / has]** to finger the strings **[precise / precisely]**, often at very high speed. Other studies have **[shown / been shown]** **[what / that]** the hippocampus, **[that / which]** **[are / is]** vital for spatial memory, **[are / is]** **[enlarging / enlarged]** in taxi drivers. The point is **[that / what]** the physical architecture of the brain **[changes / changing]** according to **[where / what]** we direct our attention and **[where / what]** we practice **[doing / to do]**.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

There's a lot of scientific evidence ①demonstrating that focused attention leads to the reshaping of the brain. In animals rewarded for ②noticing sound (to hunt or to avoid ③being hunted for example), we find much larger auditory centers in the brain. In animals rewarded for sharp eyesight, the visual areas are larger. Brain scans of violinists provide more evidence, showing dramatic growth and expansion in regions of the cortex that represent the left hand, ④that has to finger the strings precisely, often at very high speed. Other studies have shown that the hippocampus, which is vital for spatial memory, is enlarged in taxi drivers. The point is that the physical architecture of the brain changes according to where we direct our attention and ⑤what we practice doing.

8

The law of demand is **[what / that]** the demand for goods and services **[increases / increase]** as prices fall, and the demand **[falls / fells]** as prices increase. Giffen goods are special types of products **[which / for which]** the traditional law of demand **[do / does]** not apply. Instead of **[switch / switching]** to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases. Taking an example, rice in China is a giffen good because people tend to purchase less of **[it / them]** when the price **[falls / is fallen]**. The reason for this is, when the price of rice **[falling / falls]**, people have more money to spend on other types of products such as meat and dairy and, therefore, **[changing / change]** their spending pattern. On the other hand, as rice prices increase, people consume more rice.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

The law of demand is ① that the demand for goods and services increases as prices fall, and the demand falls as prices increase. Giffen goods are special types of products ② which the traditional law of demand does not apply. Instead of switching to cheaper replacements, consumers demand more of giffen goods when the price increases and ③ less of them when the price decreases. Taking an example, rice in China is a giffen good ④ because people tend to purchase less of it when the price falls. The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, ⑤ change their spending pattern. On the other hand, as rice prices increase, people consume more rice.

10

If you want the confidence **[that / what]** **[come / comes]** from **[achieving / achieve]** **[that / what]** you set out to do each day, then it's important to **[understanding / understand]** how long things are going to take. Over-optimism about **[what / that]** can **[be achieved / achieve]** within a certain time frame **[are / is]** a problem. So work on **[them / it]**. **[Making / Make]** a practice of **[estimating / estimation]** the amount of time **[needed / needing]** alongside items on your 'things to do' list, and **[learning / learn]** by experience when tasks take a greater or lesser time than **[expected / expecting]**. **[Giving / Give]** attention also to **[fitting / fit]** the task to the available time. There **[is / are]** some tasks **[that / what]** you can only set about if you have a significant amount of time available. There is no point in **[try / trying]** to gear up for **[such / so]** a task when you only have a short period available. So **[schedule / scheduling]** the time you need for the longer tasks and **[put / putting]** the short tasks into the spare moments in between.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

If you want the confidence that ①come from achieving what you set out ②to do each day, then it's important to understand how long things are going to take. Over-optimism about what can be achieved within a certain time frame is a problem. So work on it. Make a practice of ③estimating the amount of time needed alongside items on your 'things to do' list, and learn by experience when tasks take a greater or lesser time than expected. Give attention also to fitting the task to the available time. There are some tasks that you can only set about if you have a limited amount of time available. There is no point in ④trying to gear up for such a task when you only have a short period available. So ⑤schedule the time you need for the longer tasks and put the short tasks into the spare moments in between.

12

[Restricting / Restrict] the number of items customers can buy **[boost / boosts]** sales. Brian Wansink, Professor of Marketing at Cornell University, **[investigated / had investigated]** the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, **[to offer / offering]** Campbell's soup at a small discount: 79 cents rather than 89 cents. The **[discounted / discounting]** soup **[sold / was sold]** in one of three conditions: a control, **[which / where]** there **[were / was]** no limit on the volume of purchases, or two tests, **[which / where]** customers **[were limited / limited]** to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there **[was / were]** a limit, they bought 5.3 on average. This suggests scarcity encourages sales. The findings are **[particularly / particular]** strong **[because / because of]** the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor **[it was / was it]** **[holding / held]** in a laboratory **[where / which]** consumers might behave **[different / differently]**.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Restricting the number of items customers can buy ① boost sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, ② to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, ③ where there was no limit on the volume of purchases, or two tests, where customers ④ were limited to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there was a limit, they bought 5.3 on average. This suggests scarcity ⑤ encourages sales. The findings are particularly strong because the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave differently.

14

A key to engagement and achievement **[are / is]** **[providing / provided]** students with relevant texts they will be **[interesting / interested]** in. My scholarly work and my teaching **[have / has]** been **[deeply / deep]** **[influenced / influencing]** by the work of Rosalie Fink. She interviewed twelve adults **[which / who]** **[was / were]** **[highly / high]** successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and **[had / have]** had significant problems with reading throughout their school years. While she expected **[finding / to find]** **[what / that]** they had **[avoided / been avoided]** **[to read / reading]** and **[discovered / discovers]** ways to bypass it or **[compensate / compensating]** with other strategies for learning, she found the opposite. "To my surprise, I found **[what / that]** these dyslexics were enthusiastic readers... they **[rare / rarely]** avoided **[reading / to read]**. On the contrary, they sought out books." The pattern Fink discovered **[were / was]** **[that / what]** all of her subjects **[had / have]** been passionate in some personal interest. The areas of interest **[were included / included]** religion, math, business, science, history, and biography. **[What / That]** mattered **[was / were]** **[that / what]** they read **[voracious / voraciously]** to find out more.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

A key to engagement and achievement is providing students with relevant texts ① they will be interested in. My scholarly work and my teaching have been deeply influenced by the work of Rosalie Fink. She interviewed twelve adults who were highly successful in their work, including a physicist, a biochemist, and a company CEO. All of them had dyslexia and had had ② significant problems with reading throughout their school years. While she expected to find ③ that they had avoided reading and discovered ways to bypass it or compensate with other strategies for learning, she found the opposite. "To my surprise, I found that these dyslexics were enthusiastic readers...they rarely avoided reading. On the contrary, they sought out books." The pattern Fink discovered ④ to be that all of her subjects had been passionate in some personal interest. The areas of interest included religion, math, business, science, history, and biography. ⑤ What mattered was that they read voraciously to find out more.

16

One of the most striking **[characteristic / characteristics]** of a **[slept / sleeping]** animal or person **[is / are]** **[what / that]** they do not respond **[normal / normally]** to environmental stimuli. If you **[will open / open]** the eyelids of a sleeping mammal the eyes will not see **[normally / normal]** — they are **[functional / functionally]** blind. Some visual information **[apparently / apparent]** **[gets / get]** in, but it is not **[normally / normal]** **[processed / processing]** as it is **[shortened / shortening]** or **[weakening / weakened]**; same with the other sensing systems. Stimuli **[are / is]** **[registering / registered]** but not **[processing / processed]** **[normal / normally]** and they fail **[to wake / waking]** the individual. Perceptual disengagement probably **[serves / serve]** the function of **[protecting / protected]** sleep, so some authors do not count **[them / it]** as part of the definition of sleep **[themselves / itself]**. But as sleep would **[have been / be]** impossible without **[them / it]**, it seems **[essentially / essential]** to its definition. Nevertheless, many animals (including humans) **[use / using]** the intermediate state of drowsiness to derive some benefits of sleep without **[totally / total]** perceptual disengagement.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

One of the most striking characteristics of a sleeping animal or person ①is that they do not respond normally to environmental stimuli. If you ②will open the eyelids of a sleeping mammal the eyes will not see normally — they are functionally blind. Some visual information apparently gets in, but it is not normally processed as it is shortened or weakened; same with the other sensing systems. Stimuli are registered but not ③processed normally and they fail to wake the individual. Perceptual disengagement probably serves the function of protecting sleep, so some authors do not count it as part of the definition of sleep ④itself. But as sleep ⑤would be impossible without it, it seems essential to its definition. Nevertheless, many animals (including humans) use the intermediate state of drowsiness to derive some benefits of sleep without total perceptual disengagement.

18

The costs of interruptions **[is / are]** well-documented. Martin Luther King Jr. **[lamenting / lamented]** them when he described "that lovely poem **[what / that]** didn't get **[written / writing]** **[because of / because]** someone knocked on the door." Perhaps the most famous literary example **[was happened / happened]** in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then **[was / were]** **[visiting / visited]** by an unexpected guest. For Coleridge, by coincidence, the untimely visitor **[coming / came]** at a particularly bad time. He forgot his inspiration and **[leaving / left]** the work **[unfinish / unfinished]**. While there **[are / is]** many documented cases of sudden disruptions **[what / that]** **[has / have]** had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, **[slowing / slowed]** down work productivity and **[general / generally]** **[increasing / increased]** stress levels.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

The costs of interruptions are well-documented. Martin Luther King Jr. lamented ①them when he described "that lovely poem that didn't get ②written because someone knocked on the door." Perhaps the most famous literary example ③happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then was visited by an unexpected guest. For Coleridge, by coincidence, the untimely visitor came at a particularly bad time. He forgot his inspiration and left the work ④unfinish. While there are many documented cases of sudden disruptions that have had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, ⑤slowing down work productivity and generally increasing stress levels.

20

People **[are attracted / attract]** to individuals and things they cannot **[ready / readily]** obtain. In the case with things, people **[attract more / are more attracted]** to a **[desiring / desired]** object **[because / because of]** it is out of their reach. When the object of desire **[is finally gained / finally gains]**, the attraction for the object **[rapidly / rapid]** decreases. Christmas presents **[provide / are provided]** a good example of this phenomenon. Toys children **[wanting / wanted]** all year long **[are thrown / throw]** away several days after they **[are taken / take]** from gift boxes under the tree. The phenomenon also holds **[true / truly]** for human interaction, **[particular / particularly]** in the early stages of a **[developing / developed]** relationship. The **[commonly / common]** dating rule has scientific merit. An individual should not always make **[him / himself]** or **[her / herself]** **[ready / readily]** available to the person they are **[targeted / targeting]** for a longer-term relationship. A certain level of unavailability will make **[you / yourself]** more of a mystery and a challenge.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것을 모두 고르시오.

People are attracted to individuals and things they cannot readily obtain. In the case with things, people are more attracted to a(n) ①desired object because it is out of their reach. When the object of desire is finally gained, the attraction for the object rapidly decreases. Christmas presents provide a good example of this phenomenon. Toys children ②wanted all year long ③are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the early stages of a developing relationship. The common dating rule has scientific merit. An individual should not always make himself or herself ④ready available to the person they are ⑤targeted for a longer-term relationship. A certain level of unavailability will make you more of a mystery and a challenge.

22

The prevailing view among developmental scientists **[are / is]** **[what / that]** people are active contributors to their own development. People **[are influenced / influence]** by the physical and social contexts **[which / in which]** they live, but they also play a role in **[influencing / influence]** their development by interacting with, and **[change / changing]**, those contexts. Even infants influence the world around them and **[construct / constructing]** their own development through their interactions. **[Consider / Considering]** an infant **[whose / who]** **[smile / smiles]** at each adult he **[sees / is seen]**; he influences his world **[because of / because]** adults are likely to smile, use "baby talk," and **[play / playing]** with him in response. The infant brings adults into close contact, **[making / make]** one-on-one interactions and **[create / creating]** opportunities for learning. By **[engaging / engage]** the world around them, thinking, being curious, and **[interacting / interact]** with people, objects, and the world around them, individuals of all ages **[are / being]** "manufacturers of their own development."

☑ 다음 밑줄 친 부분 중 어법상 틀린 것을 모두 고르시오.

The prevailing view among developmental scientists ①<u>are</u> that people are active contributors to their own development. People are influenced by the physical and social contexts ②<u>which</u> they live in, but they also play a role in influencing their development by interacting with, and changing, those contexts. Even infants influence the world around them and construct their own development through their interactions. ③<u>Considering</u> an infant who smiles at each adult he sees; he influences his world because adults are likely to smile, use “baby talk,” and play with him in response. The infant brings adults into close contact, ④<u>makes</u> one-on-one interactions and creating opportunities for learning. By ⑤<u>engaged</u> the world around them, thinking, being curious, and interacting with people, objects, and the world around them, individuals of all ages are “manufacturers of their own development.”

24

Plato's realism includes all aspects of experience but **[are / is]** most **[easy / easily]** **[explained / explaining]** by **[considering / consider]** the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example **[carved / carving]** into stone or drawn in the sand. However, Plato would point out **[that / what]**, if you **[look / looked]** **[closely enough / enough closely]**, you would **[see / have seen]** **[that / what]** neither it, **[nor / or]** indeed any physical circle, **[were / was]** perfect. They all possessed flaws, and all **[were / was]** subject to change and **[decay / decayed]** with time. So how can we talk about perfect circles if we cannot **[actually / actual]** see or touch **[them / it]**? Plato's extraordinary answer was **[that / what]** the world we see **[is / are]** a poor reflection of a deeper unseen reality of Forms, or universals, **[where / which]** perfect cats **[chase / chasing]** perfect mice in perfect circles around perfect rocks. Plato believed **[that / what]** the Forms or universals are the true reality **[that / what]** **[exists / is existed]** in an **[invisible / invisibly]** but perfect world beyond our senses.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Plato's realism includes all aspects of experience but ①is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or ②drawn in the sand. However, Plato would point out that, if you looked closely enough, you ③would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and ④decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, ⑤which perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

26

Individuals **[who / whose]** **[perform / performs]** at a high level in their profession often **[have / has]** **[instant / instantly]** credibility with others. People admire them, they want to be like them, and they feel **[connected / connecting]** to them. When they speak, others listen — **[despite / even if]** the area of their skill **[have / has]** nothing to do with the advice they give. **[Think / Thinking]** about a world-famous basketball player. He has **[been made / made]** more money from endorsements than he ever did **[played / playing]** basketball. Is it **[because / because of]** his knowledge of the products he endorses? No. It's **[because of / because]** **[that / what]** he can do with a basketball. The same can be **[said / saying]** of an Olympic medalist swimmer. People listen to him **[because of / because]** **[that / what]** he can do in the pool. And when an actor tells us we should drive a certain car, we don't listen **[because of / because]** his expertise on engines. We listen **[because / because of]** we admire his talent. Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you **[because / because of]** **[them / it]**.

☑ (A), (B), (C)의 각 네모 안에서 어법에 맞는 표현으로 가장 적절한 것은?

Individuals who perform at a high level in their profession often have (A) **[instantly / instant]** credibility with others. People admire them, they want to (B) **[be like / like]** them, and they feel connected to them. When they speak, others listen — even if the area of their skill has nothing to do with the advice they give. Think about a world-famous basketball player. He has made more money from endorsements than he ever did playing basketball. Is it (C) **[because of / because]** his knowledge of the products he endorses? No. It's because of what he can do with a basketball. The same can be said of an Olympic medalist swimmer. People listen to him because of what he can do in the pool. And when an actor tells us we should drive a certain car, we don't listen because of his expertise on engines. We listen because we admire his talent. Excellence connects. If you possess a high level of ability in an area, others may desire to connect with you because of it.

① instantly - be like - because
② instant - be like - because
③ instantly - like - because of
④ instant - be like - because of
⑤ instant - like - because

28

Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use **[it / them]**, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on **[make / makes]** you see things **[different / differently]**. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as **[being shaped / shaping]** like television itself. That's why Marshall McLuhan said **[that / what]** every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. It is **[gently / gentle]** **[guiding / guided]** us **[seeing / to see]** the world according to a new set of codes. The way information gets to you, McLuhan argued, **[is / are]** more important than the information itself. TV teaches you **[that / what]** the world is fast; that it's about surfaces and appearances.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Every time a new medium comes along — ①<u>whether</u> it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on makes you ②<u>to see</u> things differently. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as ③<u>being shaped</u> like television itself. That's why Marshall McLuhan said ④<u>that</u> every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. It is gently guiding us ⑤<u>to see</u> the world according to a new set of codes. The way information gets to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; that it's about surfaces and appearances.

The mind is **[essentially / essential]** a survival machine. Attack and defense against other minds, **[gathered / gathering]**, **[storing / stored]**, and **[analyzed / analyzing]** information — this is **[what / that]** it is good at, but it is not at all **[creatively / creative]**. All **[true / truly]** artists create from a place of no-mind, from inner stillness. Even great scientists have **[been reported / reported]** **[what / that]** their creative breakthroughs came at a time of mental quietude. The **[surprising / surprised]** result of a nationwide inquiry among America's most famous mathematicians, **[including / included]** Einstein, **[to find / find]** out their working methods, **[were / was]** **[what / that]** thinking "plays only a subordinate part in the brief, decisive phase of the creative act **[it / itself]**." So I would say **[what / that]** the simple reason **[what / why]** the majority of scientists **[is / are]** not **[creative / creatively]** **[are / is]** not **[because of / because]** they don't know how to think, but **[because / because of]** they don't know how to stop **[thinking / to think]**!

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and ①analyzing information — this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner stillness. Even great scientists ②**have reported** that their creative breakthroughs came at a time of mental quietude. The ③surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was ④what thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop ⑤thinking!

32

In a study at Princeton University in 1992, research scientists **[had looked / looked]** at two different groups of mice. One group **[made / was made]** **[intellectually / intellectual]** superior by **[modify / modifying]** the gene for the glutamate receptor. Glutamate is a brain chemical **[that / what]** **[is / are]** necessary in learning. The other group was **[genetical / genetically]** **[manipulating / manipulated]** to be **[intellectual / intellectually]** inferior, also **[done / doing]** by **[modifying / modify]** the gene for the glutamate receptor. The smart mice **[was / were]** then **[risen / raised]** in standard cages, while the inferior mice **[was / were]** **[risen / raised]** in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice **[were / was]** genetically handicapped, they were able to perform just as well as their genetic superiors. This was a real triumph for nurture over nature. Genes **[are turned / turn]** on or off based on **[what / that]** **[is / are]** around you.

☑ (A), (B), (C)의 각 네모 안에서 어법에 맞는 표현으로 가장 적절한 것은?

In a study at Princeton University in 1992, research scientists looked at two different groups of mice. One group was made intellectually superior by modifying the gene for the glutamate receptor. Glutamate is a brain chemical that is necessary in learning. (A) **[The other / Another]** group was genetically manipulated to be intellectually inferior, also done by modifying the gene for the glutamate receptor. The smart mice were then raised in standard cages, while the inferior mice were raised in large cages with toys and exercise wheels and with lots of social interaction. At the end of the study, although the intellectually inferior mice were genetically handicapped, they were able to perform just as (B) **[good / well]** as their genetic superiors. This was a real triumph for nurture over nature. Genes are turned on or off based on (C) **[that / what]** is around you.

* glutamate: 글루타민산염 **manipulate: 조작하다

① Another - well - that
② The other - good - that
③ The other - well - that
④ The other - well - what
⑤ Another - good - what

Participants in a study **[were asked / asked]** **[answering / to answer]** questions like “Why does the moon **[has / have]** phases?" Half the participants **[were / was]** **[telling / told]** to search for the answers on the internet, while **[the other / another]** half **[wasn't / weren't]** allowed **[to do / doing]** so. Then, in the second part of the study, all of the participants **[were / was]** **[presenting / presented]** with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones **[asked / asking]** **[during / while]** the first part of the study, so participants **[what / who]** **[used / using]** the internet **[had / having]** absolutely no advantage over those who **[weren't / hadn't]**. You would think **[what / that]** both **[set / sets]** of participants would be **[equally / equal]** sure or unsure about how well **[they could / could they]** answer the new questions. But those who **[using / used]** the internet in the first part of the study rated **[them / themselves]** as more knowledgeable than those who **[hadn't / haven't]**, even about questions they hadn't **[searched / been searched]** online for. The study suggests **[what / that]** **[have / having]** access to unrelated information **[was / were]** enough to pump up their intellectual confidence.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Participants in a study ①asked to answer questions like “Why does the moon have phases?” Half the participants were told to search for the answers on the internet, while the other half weren't allowed ②to do so. Then, in the second part of the study, all of the participants ③were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about ④how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information ⑤was enough to pump up their intellectual confidence.

[Thinking / Think] of the brain as a city. If you **[had been / were]** to look out over a city and **[ask / asking]** "where is the economy **[locating / located]**?" you'd see there's no good answer to the question. Instead, the economy **[is emerged / emerges]** from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain **[operates / operate]** in isolation. In brains and in cities, everything **[is emerged / emerges]** from the interaction between residents, at all scales, **[locally / local]** and **[distantly / distant]**. Just as trains bring materials and textiles into a city, **[which / that]** **[become / becomes]** **[processed / processing]** into the economy, so the raw electrochemical signals from sensory organs **[transport / are transported]** along superhighways of neurons. There the signals undergo processing and transformation into our conscious reality.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Think of the brain as a city. If you were ① to look out over a city and ask "where is the economy located?" you'd see there's no good answer to the question. Instead, the economy ② emerges from the interaction of all the elements — from the stores and the banks to the merchants and the customers. And so it ③ is with the brain's operation: it doesn't happen in one spot. Just as in a city, no neighborhood of the brain operates in isolation. In brains and in cities, everything emerges from the interaction between residents, at all scales, locally and distantly. Just as trains bring materials and textiles into a city, ④ where become processed into the economy, so the raw electrochemical signals from sensory organs are transported along superhighways of neurons. There the signals undergo processing and ⑤ transformation into our conscious reality.

Over time, babies construct expectations about **[how / what]** sounds they will hear when. They hold in memory the sound patterns **[that / what]** **[occur / are occurred]** on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will **[follow / be followed]** by that sound." Scientists conclude **[what / that]** **[much / many]** of babies' skill in **[learn / learning]** language **[is / are]** due to their ability to calculate statistics. For babies, this means **[that / what]** they appear to pay close attention to the patterns **[what / that]** **[repeats / repeat]** in language. They remember, in a systematic way, **[how / what]** often **[do sounds / sounds]** occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them **[to track / tracking]**, within the neural circuits of their brains, the frequency of sound patterns and **[using / to use]** this knowledge to make predictions about the meaning in patterns of sounds.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that ①occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will ②be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics. For babies, this means ③that they appear to pay close attention to the patterns that repeat in language. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them ④to track, within the neural circuits of their brains, the frequency of sound patterns and ⑤using this knowledge to make predictions about the meaning in patterns of sounds.

40

Research has **[confirmed / been confirmed]** **[what / that]** athletes are less likely **[to participate / participating]** in unacceptable behavior than **[is / are]** non-athletes. However, moral reasoning and good sporting behavior **[seems / seem]** to **[decline / be declined]** as athletes progress to higher competitive levels, in part **[because of / because]** the **[increasing / increased]** emphasis on winning. Thus winning can be a **[double-edged / double-edging]** sword in **[teaching / teach]** character development. Some athletes may want **[to win / winning]** so much **[that / what]** they lie, cheat, and **[break / breaking]** team rules. They may develop undesirable character traits **[what / that]** can enhance their ability **[to win / winning]** in the short term. However, when athletes **[resist / resisting]** the temptation **[to win / winning]** in a dishonest way, they can develop positive character traits **[that / what]** **[last / lasts]** a lifetime. Character is a **[learned / learning]** behavior, and a sense of fair play develops only if coaches plan **[to teach / teaching]** those lessons **[systematical / systematically]**.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Research ①has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem ②to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want ③to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits ④what can enhance their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a ⑤learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

B1 어법 O/X

1 — 2 — 3

● 각 문장에서 어법상 틀린 곳이 있다면 표시한 후 바르게 수정하세요

All experimental equipment must be handled with care. O | X

A warehouse is a large facility which products are storing before it is sold. O | X
↳ where ↳ stored ↳ they are

2

01. Anthropologist Gregory Bateson suggests what we tend understand the world by focus in on particular features within it. O | X

02. Taking platypuses. We might zoom in so close to their fur what each hair appear differently. O | X

03. We might also zoom out to the extent what it is appeared as a single, uniform object. O | X

04. We might take the platypus as an individual, or we might be treated it as part of a larger unit such as a species or an ecosystem. O | X

05. It's possible moving between much of these perspectives, despite we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entirely ecosystems. O | X

06. Crucially, however, we can only take up one perspective at a time. O | X

07. We can pay attention to the varying behavior of individual animals, looks at that unite them into a single species, or looks at them as part of bigger ecological patterns. O | X

08. All possible perspective involves emphasized certainly aspects and ignored others. O | X

4

01. Not only memory underlies our ability to think at all, it defines the content of our experiences and what we preserve them for years to come. O | X

02. Memory makes us who are we. O | X

03. If I were to suffer from heart failure and depended upon an artificial heart, I would have been no less myself. O | X

04. If I lost an arm in an accident and had it replace with an artificial arm, I would still have been essential me. O | X

05. As long as my mind and memories remain intactly, I will continue to be the same person, no matter how part of my body (other than the brain) replaces. O | X

06. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fading, people often say what he "is not himself anymore," or what it is as if the person "is no longer there," despite his body remains unchanged. O | X

6

01. There's a lot of scientific evidence demonstrated what focused attention leading to the reshaping of the brain.

O | X

02. In animals rewarding for notice sound (to hunt or to avoid to be hunted for example), we find very larger auditory centers in the brain. O | X

03. In animals rewarding for sharp eyesight, the visual areas are larger. O | X

04. Brain scans of violinists provide more evidence, showed dramatic growth and expansion in regions of the cortex what represents the left hand, that have to finger the strings precise, often at very high speed. O | X

05. Other studies have been shown what the hippocampus, that are vital for spatial memory, are enlarging in taxi drivers.

O | X

06. The point is what the physical architecture of the brain changing according to what we direct our attention and where we practice to do. O | X

8

01. The law of demand is what the demand for goods and services increase as prices fall, and the demand fells as prices increase. O | X

02. Giffen goods are special types of products which the traditional law of demand do not apply. O | X

03. Instead of switch to cheaper replacements, consumers demand more of giffen goods when the price increases and less of them when the price decreases. O | X

04. Taking an example, rice in China is a giffen good because people tend to purchase less of them when the price is fallen. O | X

05. The reason for this is, when the price of rice falling, people have more money to spend on other types of products such as meat and dairy and, therefore, changing their spending pattern. O | X

06. On the other hand, as rice prices increase, people consume more rice. O | X

B1 어법 O/X

10

01. If you want the confidence what come from achieve that you set out to do each day, then it's important to understanding how long things are going to take. O | X

02. Over-optimism about that can achieve within a certain time frame are a problem. O | X

03. So work on them. O | X

04. Making a practice of estimation the amount of time needing alongside items on your 'things to do' list, and learning by experience when tasks take a greater or lesser time than expecting. O | X

05. Giving attention also to fit the task to the available time. O | X

06. There is some tasks what you can only set about if you have a significant amount of time available. O | X

07. There is no point in try to gear up for so a task when you only have a short period available. O | X

08. So scheduling the time you need for the longer tasks and putting the short tasks into the spare moments in between. O | X

12

01. Restrict the number of items customers can buy boost sales. O | X

02. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in O | X

03. He persuaded three supermarkets in Sioux City, Iowa, offering Campbell's soup at a small discount: 79 cents rather than 89 cents. O | X

04. The discounting soup sold in one of three conditions: a control, which there were no limit on the volume of purchases, or two tests, which customers limited to neither four or twelve cans. O | X

05. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there were a limit, they bought 5.3 on average. O | X

06. This suggests scarcity encourages sales. O | X

07. The findings are particular strong because of the test took place in a supermarket with genuine shoppers. O | X

08. It didn't rely on claiming data, nor it was holding in a laboratory which consumers might behave different. O | X

14

01. A key to engagement and achievement are provided students with relevant texts they will be interesting in. O | X

02. My scholarly work and my teaching has been deep influencing by the work of Rosalie Fink. O | X

03. She interviewed twelve adults which was high successful in their work, including a physicist, a biochemist, and a company CEO. O | X

04. All of them had dyslexia and have had significant problems with reading throughout their school years. O | X

05. While she expected finding what they had been avoided to read and discovers ways to bypass it or compensating with other strategies for learning, she found the opposite. O | X

06. "To my surprise, I found what these dyslexics were enthusiastic readers... they rare avoided to read. O | X

07. On the contrary, they sought out books." O | X

08. The pattern Fink discovered were what all of her subjects have been passionate in some personal interest. O | X

09. The areas of interest were included religion, math, business, science, history, and biography. O | X

10. That mattered were what they read voracious to find out more. O | X

16

01. One of the most striking characteristic of a slept animal or person are what they do not respond normal to environmental stimuli.
O | X

02. If you will open the eyelids of a sleeping mammal the eyes will not see normal — they are functional blind. O | X

03. Some visual information apparent get in, but it is not normal processing as it is shortening or weakening; same with the other sensing systems. O | X

04. Stimuli is registering but not processing normal and they fail waking the individual. O | X

05. Perceptual disengagement probably serve the function of protected sleep, so some authors do not count them as part of the definition of sleep themselves. O | X

06. But as sleep would have been impossible without them, it seems essentially to its definition. O | X

07. Nevertheless, many animals (including humans) using the intermediate state of drowsiness to derive some benefits of sleep without totally perceptual disengagement. O | X

18

01. The costs of interruptions is well-documented. O | X

02. Martin Luther King Jr. lamenting them when he described "that lovely poem what didn't get writing because of someone knocked on the door." O | X

03. Perhaps the most famous literary example was happened in 1797 when Samuel Taylor Coleridge started writing his poem Kubla Khan from a dream he had but then were visiting by an unexpected guest. O | X

04. For Coleridge, by coincidence, the untimely visitor coming at a particularly bad time. O | X

05. He forgot his inspiration and leaving the work unfinish. O | X

06. While there is many documented cases of sudden disruptions what has had significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, slowed down work productivity and general increased stress levels. O | X

20

01. People attract to individuals and things they cannot ready obtain. O | X

02. In the case with things, people attract more to a desiring object because of it is out of its reach. O | X

03. When the object of desire finally gains, the attraction for the object rapid decreases. O | X

04. Christmas presents are provided a good example of this phenomenon. O | X

05. Toys children wanting all year long throw away several days after they take from gift boxes under the tree. O | X

06. The phenomenon also holds truly for human interaction, particular in the early stages of a developed relationship. O | X

07. The commonly dating rule has scientific merit. O | X

08. An individual should not always make him or her available readily to the person they are targeted for a longer-term relationship. O | X

09. A certainly level of unavailability will make yourself more of a mystery and a challenge. O | X

22

01. The prevailing view among developmental scientists are what people are active contributors to their own development. O | X

02. People influence by the physical and social contexts which they live, but they also play a role in influence their development by interacting with, and change, those contexts. O | X

03. Even infants influence the world around them and constructing their own development through their interactions. O | X

04. Considering an infant whose smile at each adult he is seen; he influences his world because of adults are likely to smile, use "baby talk," and playing with him in response. O | X

05. The infant brings adults into close contact, make one-on-one interactions and create opportunities for learning. O | X

06. By engage the world around them, thinking, being curious, and interact with people, objects, and the world around them, individuals of all ages being "manufacturers of their own development." O | X

24

01. Plato's realism includes every aspects of experience but is most easily explaining by consider the nature of mathematical and geometrical objects such as circles. O | X

02. He asked the question, what is a circle? O | X

03. You might indicate a particular example carving into stone or drawn in the sand. O | X

04. However, Plato would have pointed out what, if you look enough closely, you would see what neither it, or indeed any physical circle, were perfect. O | X

05. They all possessed flaws, and all was subject changing and decaying with time. O | X

06. So how can we talk about perfect circles if we cannot actually see or touches them? O | X

07. Plato's extraordinary answer was what the world we see are a poor reflection of a deeper unseen reality of Forms, or universals, which perfect cats are chased perfect mice in perfect circles around perfect rocks. O | X

08. Plato believed what the Forms or universals are the true reality what exist in an invisible but perfect world beyond our senses. O | X

26

01. Individuals who performs at a high level in their profession often has instantly credibility with another. O | X

02. People admire them, they want being like them, and they feel connecting to them. O | X

03. When they speak, another listen — despite the area of their skill have nothing to do with the advice they give. O | X

04. Thinking about a world-famous basketball player. O | X

05. He has been made more money from endorsements than he ever did played basketball. O | X

06. Is it because his knowledge of the products he endorses? O | X

07. No. It's because that can he do with a basketball. O | X

08. The same can be saying of an Olympic medalist swimmer. O | X

09. People listen to him since that can he do in the pool. O | X

10. And when an actor tells us we should drive a certain car, we don't listen because his expertise on engines. O | X

11. We listen because of we admire his talent. O | X

12. Excellence connects. O | X

13. If you possess a high level of ability in an area, others may desire to be connected with you because them. O | X

28

01. Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use them, it's like you are putting on a new kind of goggles, with their own special colors and lenses. O | X

02. Each set of goggles you put on make you see things different. O | X

03. So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as shaping like television itself. O | X

04. That's why Marshall McLuhan said what every time a new medium comes along — a new way for humans to communicate — it has buried in it a message. O | X

05. It is gentle guided us seeing the world according to a new set of codes. O | X

06. The way information gets to you, McLuhan argued, are more important than the information itself. O | X

07. TV teaches you what the world is fast; that it's about surfaces and appearances. O | X

30

01. The mind is essential a survival machine. O | X

02. Attack and defense against other minds, gathered, stored, and analyzed information — this is that it is good at, but it is not at all creatively. O | X

03. All truly artists create from a place of no-mind, from inner stillness. O | X

04. Even great scientists have been reported what their creatively breakthroughs came at a time of mentally quietude. O | X

05. The surprised result of a nationwide inquiry among America's most famous mathematicians, included Einstein, find out their working methods, were what thinking "plays only a subordinate part in the brief, decisive phase of the creative act it." O | X

06. So I would say what the simple reason what the majority of scientists is not creatively are not because of they don't know how to think, but because of they don't know how to stop to think! O | X

32

01. In a study at Princeton University in 1992, research scientists had looked at two different groups of mice. O | X

02. One group made intellectual superior by modify the gene for the glutamate receptor. O | X

03. Glutamate is a brain chemical what are necessary in learning. O | X

04. The other group was genetical manipulating to be intellectual inferior, also doing by modify the gene for the glutamate receptor. O | X

05. The smart mice was then risen in standard cages, while the inferior mice was risen in large cages with toys and exercise wheels and with lots of social interaction. O | X

06. At the end of the study, although the intellectually inferior mice was genetically handicapped, they were able to perform just as well as their genetic superiors. O | X

07. This was a real triumph for nurture over nature. O | X

08. Genes turn on or off based on that are around you. O | X

34

01. Participants in a study asked to answer questions like “Why does the moon has phases?" O | X

02. Half the participants told to search for the answers on the internet, while another half allowed doing so. O | X

03. Then, in the second part of the study, every of the participants presented with a new set of questions, such as "Why does Swiss cheese have holes?" O | X

04. These questions unrelated to the ones asking during the first part of the study, so participants what using the internet had absolutely no advantage over those which hasn't. O | X

05. You would think what both set of participants would be equal sure or unsure about how well could they answer the new questions. O | X

06. But those which used the internet in the first part of the study were rated them as more knowledgeable than those who hadn't, even about questions they hadn't been searched online for. O | X

07. The study suggests what have access to unrelated information were enough to pump up their intellectual confidence. O | X

36

01. Thinking of the brain as a city. O | X

02. If you had been to look out over a city and asking "where is the economy locating?" you'd see there's no good answer to the question. O | X

03. Instead of, the economy is emerged from the interaction of every the elements — from the stores and the banks to the merchants and the customers. O | X

04. And so it is with the brain's operation: it doesn't happen in one spot. O | X

05. Just as in a city, no neighborhood of the brain operate in isolation. O | X

06. In brains and in cities, everything emerges from the interaction between residents, at all scales, local and distant. O | X

07. Just as trains bring materials and textiles into a city, that becomes processing into the economy, so the raw electrochemical signals from sensory organs transport along superhighways of neurons. O | X

08. There the signals undergo processing and transformation into our consciously reality. O | X

38

01. Over time, babies construct expectations about how sounds they will hear when. O | X

02. They hold in memory the sound patterns what are occurred on a regular basis. O | X

03. They make hypotheses like, "If I hear this sound first, it probably will follow by that sound." O | X

04. Scientists conclude what many of babies' skill in learn language are due to their ability to calculate statistics. O | X

05. For babies, this means what they appear to pay close attention to the patterns what repeats in language. O | X

06. They remember, in a systematic way, what often do sounds occur, in what order, with what intervals, and with what changes of pitch. O | X

07. This memory store allows them tracking, within the neural circuits of their brains, the frequency of sound patterns and using this knowledge to make predictions about the meaning in patterns of sounds. O | X

40

01. Research has been confirmed what athletes are less likely participating in unacceptable behavior than is non-athletes.

O | X

02. However, moral reasoning and good sporting behavior seems to be declined as athletes progress to higher competitive levels, in part because the increasing emphasis on winning. O | X

03. Thus winning can be a double-edging sword in teach character development. O | X

04. Some athletes may want winning so much what they lie, cheat, and breaking team rules. O | X

05. They may develop undesirable character traits what can enhance their ability winning in the short term.

O | X

06. However, when athletes resisting the temptation winning in a dishonest way, they can develop positive character traits what lasts a lifetime. O | X

07. Character is a learning behavior, and a sense of fair play develops only what coaches plan teaching those lessons systematical. O | X

2

01. Anthropologist Gregory Bateson suggests _____ we tend _____ _____ the world by _____ in on particular features within it.

인류학자 Gregory Bateson은 우리가 세상 안의 특정한 특징에 초점을 맞춤으로써 세상을 이해하는 경향이 있다고 제안한다.

02. _____ platypuses. We might zoom in so _____ to their fur _____ each _____ _____ _____.

오리너구리를 예로 들어 보자. 우리가 그들의 털을 매우 가까이 확대하면 각 가닥이 다르게 보인다.

03. We might also zoom out to the extent _____ it _____ as a single, uniform object.

우리는 또한 그것이 하나의 동일한 개체로 보이는 정도까지 축소할 수도 있다.

04. We might take the platypus as an individual, or we might _____ it as part of a larger unit such as a species or an ecosystem.

우리는 오리너구리를 개체로 취급할 수도 있고 종 또는 생태계와 같이 더 큰 단위의 일부로 취급할 수도 있다.

05. _____ possible _____ _____ between _____ of these perspectives, _____ we may need some additional tools and skills to zoom in on individual pieces of hair or _____ out to _____ ecosystems.

비록 개별 머리카락을 확대하거나 전체 생태계로 축소하기 위해 몇 가지 추가 도구와 기술이 필요할지도 모르지만, 이러한 많은 관점 사이를 이동하는 것은 가능하다.

06. Crucially, however, we can only take up one perspective at a time.

그러나 결정적으로 우리는 한 번에 하나의 관점만 취할 수 있다.

07. We can pay attention to the varied behavior of individual animals, _____ at _____ _____ them into a single species, or _____ at them as part of bigger ecological patterns.

우리는 개별 동물의 다양한 행동에 주의를 기울일 수 있고, 그들을 단일 종으로 통합하는 것을 살펴볼 수도 있고, 더 큰 생태학적 패턴의 일부로서 그들을 살펴볼 수도 있다.

08. Every possible perspective _____ _____ certain aspects and _____ others.

가능한 모든 관점은 특정 측면을 강조하고 다른 측면을 외면하는 것을 포함한다.

4

01. _____ _____ _____ _____ _____ our ability to think at all, it defines the content of our experiences and _____ we preserve _____ _____ _____ _____ _____ .

기억이 어쨌든 사고하는 우리의 능력의 기반이 될 뿐만 아니라 그것은 우리의 경험의 내용과 다가올 수년간 우리가 그것을 보존하는 방식을 규정한다.

02. Memory makes us _____ _____ _____ .

기억은 우리를 우리가 누구인지로 만들어 준다.

03. If I _____ _____ _____ _____ heart failure and _____ _____ an artificial heart, I _____ _____ _____ _____ _____ .

만약 내가 심장 부전을 앓고 인공 심장에 의존한다 해도 나는 역시 여느 때의 나일 것이다.

04. If I _____ an arm in an accident and _____ _____ _____ with an artificial arm, I _____ _____ _____ _____ _____ .

만약 내가 사고로 한 팔을 잃고 그것을 인공 팔로 교체한다 해도 나는 여전히 본질적으로 '나'일 것이다.

05. As long as my mind and memories _____ _____ , I will continue to be the same person, _____ _____ _____ _____ of my body (other than the brain) _____ _____ .

나의 정신과 기억이 손상되지 않은 한, 나의 신체의 (뇌를 제외한) 어떤 부분이 교체될지라도 나는 계속 같은 사람일 것이다.

06. On the other hand, when someone _____ _____ advanced Alzheimer's disease and his memories _____ , people often say _____ he "is not _____ anymore," or _____ it is _____ _____ the person "is no longer there," _____ his body _____ _____ .

반면 누군가 후기의 알츠하이머병을 앓고 그의 기억이 흐려진다면, 비록 그의 신체는 변하지 않은 채로 남아 있음에도 불구하고 사람들은 종종 그는 '더 이상 여느 때의 그가 아니라고' 혹은 마치 그 사람이 '더 이상 그곳에 없는' 것 같다고 말한다.

6

01. There's a lot of scientific evidence _____ _____ focused attention _____ _____ the reshaping of the brain.

주의 집중이 뇌의 재구조화로 이어진다는 과학적 증거는 많이 있다.

02. In animals _____ for _____ sound (to hunt or to avoid _____ _____ for example), we find _____ larger auditory centers in the brain.

(예를 들어 사냥하거나 사냥감이 되는 것을 피하기 위해) 소리를 알아채는 것에 대한 보상을 받은 동물에서 우리는 뇌의 청각 중추가 훨씬 더 큰 것을 발견한다.

03. In animals _____ for sharp eyesight, the visual areas are larger.

예리한 시력에 대한 보상을 받은 동물은 시각 영역이 더 크다.

04. Brain scans of violinists _____ more evidence, _____ dramatic growth and expansion in regions of the cortex _____ _____ the left hand, _____ _____ _____ _____ the strings _____, often at very high speed.

바이올린 연주자의 뇌 스캔 결과는 더 많은 증거를 제공해서 종종 매우 빠른 속도로 현을 정확하게 켜야 하는 왼손을 나타내는 피질 영역의 극적인 성장과 확장을 보여준다.

05. Other studies have shown _____ the hippocampus, _____ _____ vital for spatial memory, _____ _____ in taxi drivers.

다른 연구는 공간 기억에 필수적인 해마가 택시 운전사에게서 확대되는 것을 보여준다.

06. The point is _____ the physical architecture of the brain _____ according to _____ we direct our attention and _____ we practice _____.

요점은 우리가 어디에 주의를 기울이고 무엇을 연습하느냐에 따라 뇌의 물리적 구조가 달라진다는 것이다.

8

01. The law of demand _____ _____ the demand for goods and services _____ as prices _____, and the demand _____ as prices increase.

수요의 법칙은 가격이 하락할수록 상품과 서비스에 대한 수요가 증가하고, 가격이 상승할수록 수요가 감소하는 것이다.

02. Giffen goods are special types of products _____ _____ the traditional law of demand _____ _____ _____.

'기펜재'는 전통적인 수요 법칙이 적용되지 않는 특별한 유형의 상품이다.

03. Instead of _____ to cheaper replacements, consumers demand more of giffen goods when the price _____ and less of them when the price _____.

저렴한 대체품으로 바꾸는 대신 소비자들은 가격이 상승할 때 기펜재를 더 많이, 가격이 하락할 때 덜 수요한다.

04. _____ an example, rice in China is a giffen good because people tend to purchase less of _____ when the price _____.

예를 들어, 중국의 쌀은 가격이 하락할 때 사람들이 덜 구매하는 경향이 있기 때문에 기펜재이다.

05. The reason for this is, when the price of rice falls, people have more money to spend on other types of products such as meat and dairy and, therefore, _____ their spending pattern.

그 이유는, 쌀값이 하락하면, 사람들이 고기나 유제품 같은 다른 종류의 상품에 쓸 돈이 많아지고, 그 결과 소비 패턴을 바꾸기 때문이다.

06. On the other hand, as rice prices increase, people consume more rice.

반면에, 쌀값이 상승하면, 사람들은 더 많은 쌀을 소비한다.

10

01. If you want the confidence _____ _____ from _____ _____ you set out_____ _____ _____ each day, then it's important _____ _____ _____ _____ things are going _____ _____.

만약 매일 하고자 착수하는 일을 성취함으로써 얻게 되는 자신감을 원한다면 일이 얼마나 시간이 걸릴지 아는 것이 중요하다.

02. Over-optimism about _____ can _____ _____ within a certain time frame _____ a problem.

어떤 특정 기간 내에 성취될 수 있는 것에 대한 지나친 낙관주의는 문제다.

03. So _____ on it.

그러므로 그것을 개선하려고 노력하라.

04. _____ a practice of _____ the amount of time _____ alongside items on your 'things to do' list, and _____ by experience when tasks _____ a greater or lesser time _____ _____ _____.

'해야 할 일' 목록에 있는 항목과 함께, 필요한 시간의 양을 추산하는 것을 습관화하고, 과제가 언제 예상보다 더 많은 시간 또는 더 적은 시간이 걸리는지 경험을 통해 배우라.

05. _____ attention also to _____ the task to the available time.

그 이용 가능한 시간에 과제를 맞추는 것에도 또한 주의를 기울이라.

06. There _____ some tasks _____ you can only set about _____ you have a significant amount of time _____.

이용할 수 있는 시간의 양이 상당히 있어야만 시작할 수 있는 몇몇 과제가 있다.

07. There is no point _____ _____ _____ _____ _____ for _____ a task when you only have a short period _____.

이용할 수 있는 시간이 짧은 시간밖에 없을 때 그런 과제를 위해 준비를 갖추려고 애쓰는 것은 무의미하다.

08. So _____ the time you need for the longer tasks and _____ the short tasks into the spare moments in between.

그러므로 시간이 더 오래 걸리는 과제를 위해 필요한 시간을 계획하고, 그 사이의 남는 시간에 시간이 짧게 걸리는 과제를 배치하라.

12

01. _____ the number of items customers can buy _____ sales.

고객이 구입할 수 있는 품목의 개수를 제한하는 것은 매출을 증가시킨다.

02. Brian Wansink, Professor of Marketing at Cornell University, _____ the effectiveness of this tactic in 1998.

Cornell University의 마케팅 교수인 Brian Wansink는 1998년에 이 전략의 효과를 조사했다.

03. He _____ three supermarkets in Sioux City, Iowa, _____ _____ Campbell's soup at a small discount: 79 cents rather than 89 cents.

그는 Iowa주 Sioux City에 있는 세 개의 슈퍼마켓이 Campbell의 수프를 약간 할인하여 제공하도록 설득했다: 89센트가 아닌 79센트로.

04. The _____ soup _____ _____ in one of three conditions: a control, _____ there _____ no limit on the volume of purchases, or two tests, _____ customers _____ _____ to _____ four or twelve cans.

할인된 수프는 세 가지 조건 중 하나의 조건으로 판매되었다: 구매량에 제한이 없는 하나의 대조군, 또는 고객이 4개의 캔으로 제한되거나 12개의 캔으로 제한되는 두 개의 실험군.

05. In the unlimited condition shoppers _____ 3.3 cans on average, whereas in the scarce condition, when there _____ a limit, they bought 5.3 on average.

무제한 조건에서 구매자들은 평균 3.3캔을 구입했던 반면, 제한이 있던 희소 조건에서는, 평균 5.3캔을 구입했다.

06. This suggests scarcity _____ sales.

이것은 희소성이 판매를 장려한다는 것을 보여준다.

07. The findings are _____ _____ _____ the test _____ _____ in a supermarket with genuine shoppers.

이 실험은 진짜 구매자들이 있는 슈퍼마켓에서 진행되었기 때문에 그 결과는 특히 타당하다.

08. It _____ _____ _____ claimed data, _____ _____ _____ _____ in a laboratory _____ consumers might behave _____.

그것은 주장된 데이터에 의존하지 않았고, 소비자들이 다르게 행동할지도 모르는 실험실에서 이루어진 것도 아니었다.

14

01. A key to engagement and achievement _____ _____ students with relevant texts they will _____ _____ _____.

참여와 성취의 핵심은 학생들에게 그들이 관심 있어 할 적절한 글을 제공하는 것이다.

02. My scholarly work and my teaching _____ _____ _____ _____ by the work of Rosalie Fink.

나의 학문적인 연구와 나의 수업은 Rosalie Fink의 연구에 깊이 영향을 받아왔다.

03. She interviewed twelve adults _____ _____ _____ _____ in their work, _____ a physicist, a biochemist, and a company CEO.

그녀는 물리학자, 생화학자 그리고 회사의 최고 경영자를 포함해 그들의 직업에서 매우 성공한 열두 명의 성인들과 면담했다.

04. _____ of them had dyslexia and _____ _____ significant problems with reading throughout their school years.

그들 모두가 난독증이 있었고 그들의 학령기 내내 읽기에 상당한 문제를 겪어 왔다.

05. While she expected _____ _____ _____ they _____ _____ _____ and _____ ways to bypass it or _____ with other strategies for learning, she found the opposite.

그녀는 그들이 학습에 있어 읽기를 피했고 그것을 우회하거나 다른 전략들로 보완할 방법을 발견했을 것이라고 알아낼 것을 예상했으나, 정반대를 알아냈다.

06. "To my surprise, I found _____ these dyslexics were enthusiastic readers... they _____ _____ _____.

"놀랍게도, 나는 난독증이 있는 이런 사람들이 열성적인 독자인 것을... 그들이 좀처럼 읽기를 피하지 않는 것을 알아냈다.

07. On the contrary, they sought out books."

이에 반하여, 그들은 책을 찾았다."

08. The pattern Fink discovered _____ _____ _____ of her subjects _____ _____ _____ in some personal interest.

Fink가 발견한 패턴은 그녀의 실험 대상자 모두가 어떤 개인적인 관심사에 열정적이었다는 것이었다.

09. The areas of interest _____ religion, math, business, science, history, and biography.

관심 분야는 종교, 수학, 상업, 과학, 역사 그리고 생물학을 포함했다.

10. _____ _____ _____ _____ they read _____ to find out more.

중요한 것은 그들이 더 많이 알아내기 위해 탐욕스럽게 읽었다는 것이다.

16

01. _____ _____ _____ _____ _____ _____ of a _____ animal or person _____ _____ they do not respond _____ to environmental stimuli.

잠을 자고 있는 동물이나 사람의 가장 두드러진 특징 중 하나는 그들이 환경의 자극에 정상적으로 반응하지 않는다는 것이다.

02. If you _____ the eyelids of a _____ mammal the eyes will not see _____ — they are _____ _____.

만약 당신이 잠을 자고 있는 포유류의 눈꺼풀을 열면, 그 눈은 정상적으로 볼 수 없을 것인데, 즉 그 눈은 기능적으로는 실명 상태이다.

03. Some visual information _____ _____ in, but it is not _____ _____ as it is _____ or _____; same with the other sensing systems.

어떤 시각적 정보는 명백히 눈으로 들어오지만, 그것은 짧아지거나 약화되어서 정상적으로 처리되지 않는데, 이는 다른 감각 체계도 마찬가지다.

04. Stimuli _____ _____ but not _____ normally and they fail _____ _____ the individual.

자극은 등록되지만 정상적으로 처리되지 않고 사람을 깨우는 데 실패한다.

05. Perceptual disengagement probably _____ the function of _____ sleep, so some authors do not count _____ as part of the definition of sleep _____.

지각 이탈은 추측하건대 수면을 보호하는 기능을 제공해서 어떤 저자는 그것을 수면 자체의 정의의 일부로 여기지 않는다.

06. But as sleep _____ _____ _____ _____ _____, it seems _____ to its definition.

그러나 수면이 그것 없이는 불가능하기 때문에 그것(지각 이탈)은 그것(수면)의 정의에 필수적인 것으로 보여진다.

07. Nevertheless, many animals (including humans) _____ the intermediate state of drowsiness to derive some benefits of sleep without _____ perceptual disengagement.

그럼에도 (인간을 포함한) 많은 동물은 완전한 지각 이탈 없이 수면의 일부 이득을 끌어내기 위해서 졸음이라는 중간 상태를 이용한다.

18

01. The costs of interruptions _____ well-documented.

방해로 인한 대가는 잘 기록되어 있다.

02. Martin Luther King Jr. _____ them when he described "_____ lovely poem that didn't _____ _____ _____ someone _____ on the door."

Martin Luther King Jr.는 "누군가 문을 두드리는 바람에 쓰여지지 못한 사랑스러운 시"를 묘사하며 이를 슬퍼했다.

03. Perhaps the most famous literary example _____ in 1797 when Samuel Taylor Coleridge started _____ his poem Kubla Khan from a dream he had but then _____ _____ by an unexpected guest.

아마도 가장 유명한 문학적 사례는 1797년 Samuel Taylor Coleridge가 꿈을 꾸고 Kubla Khan이라는 시를 쓰기 시작했는데 뜻밖의 손님이 찾아왔을 때 일어났던 일일 것이다.

04. For Coleridge, by coincidence, the untimely visitor came at a particularly bad time.

공교롭게도 Coleridge에게 이 불청객은 특히 좋지 않은 시기에 찾아왔다.

05. He _____ his inspiration and _____ the work _____.

그는 영감을 잊고 작품을 미완성으로 남겼다.

06. While there _____ many documented cases of sudden disruptions _____ _____ _____ significant consequences for professionals in critical roles such as doctors, nurses, control room operators, stock traders, and pilots, they also impact most of us in our everyday lives, _____ _____ work productivity and _____ _____ stress levels.

의사, 간호사, 관제실 운영자, 주식 거래자, 조종사와 같은 중요한 역할을 담당하는 전문가들에게 심각한 결과를 초래한 갑작스러운 방해의 사례가 많이 기록되어 있지만, 갑작스러운 방해는 일상생활에서 대부분의 사람들에게도 영향을 미쳐 업무 생산성을 떨어뜨리며 일반적으로 스트레스 수준을 높인다.

20

01. People _____ _____ to individuals and things they cannot _____ obtain.

사람들은 자신들이 쉽게 얻을 수 없는 사람이나 사물에 이끌린다.

02. In the case with things, people _____ _____ _____ to a _____ object _____ it is out of their reach.

사물의 경우, 사람들은 원하는 물건이 그들의 손에 닿지 않기 때문에 그것에 더 이끌린다.

03. When the object of desire ____ _____ _____, the attraction for the object _____ decreases.

원하는 물건이 마침내 얻어지면, 그 물건에 대한 매력은 빠르게 감소한다.

04. Christmas presents _____ a good example of this phenomenon.

크리스마스 선물이 이러한 현상의 좋은 예를 제공한다.

05. Toys children _____ all year long _____ _____ _____ several days after they _____ _____ from gift boxes under the tree.

아이들이 일 년 내내 원했던 장난감은 트리 아래 선물 상자에서 꺼내진 후 며칠 뒤에 버려진다.

06. The phenomenon also holds _____ for human interaction, _____ in the early stages of a _____ relationship.

그 현상은 사람들의 상호 작용, 특히 관계가 형성되는 초기 단계에도 유효하다.

07. The _____ dating rule has scientific merit.

일반적인 데이트 규칙에는 과학적 가치가 있다.

08. An individual should not always make _____ or _____ _____ _____ to the person they are targeting for a longer-term relationship.

사람은 장기적인 관계를 목표로 하고 있는 사람에게 자기 자신을 항상 쉽게 만날 수 있게 해서는 안 된다.

09. A certain level of unavailability will make _____ more of a mystery and a challenge.

일정 정도의 만날 수 없음이 여러분을 더욱 신비롭고 도전적인 존재로 만들어 줄 것이다.

22

01. The prevailing view among developmental scientists is _____ people are active contributors to their own development.
발달 과학자들 사이에서 지배적인 견해는 사람들이 그들 자신의 발달에 능동적인 기여자라는 것이다.

02. People _____ _____ by the physical and social contexts _____ _____ they _____, but they also play a role in influencing their development by _____ _____, and _____, those contexts.
사람들은 그들이 사는 물리적인 그리고 사회적인 환경의 영향을 받지만, 그들은 또한 그 환경들과 상호 작용하고, 그리고 변화시킴으로써, 그들의 발달에 영향을 주는 역할을 한다.

03. Even infants influence the world around them and _____ their own development through their interactions.
심지어 유아들도 그들 주변의 세상에 영향을 주고 상호 작용을 통해서 그들 자신의 발달을 구성한다.

04. _____ an infant _____ _____ at each adult he sees; he influences his world because adults are likely to smile, _____ "baby talk," and _____ with him in response.
그가 바라보는 각각의 어른에게 미소 짓는 유아를 생각해 보라. (그에) 반응하여, 어른들이 미소 짓고, "아기 말"을 사용하고, 그리고 그와 함께 놀아줄 것이기 때문에 그는 자신의 세상에 영향을 준다.

05. The infant brings adults into close contact, _____ one-on-one interactions and _____ opportunities for learning.
그 유아는 어른들을 친밀한 연결로 끌어들여서, 일대일 상호작용을 하고 학습의 기회를 만든다.

06. By _____ the world around them, _____, _____ curious, and _____ with people, objects, and the world around them, individuals of all ages _____ "manufacturers of their own development."
그들 주변 세상의 관심을 끌고, 생각하고, 호기심을 가지고, 그리고 그들 주변의 사람들, 사물들, 그리고 세상과 상호 작용함으로써, 모든 연령대의 개인들은 "그들 자신의 발달을 생산하는 사람"이다.

24

01. Plato's realism includes all aspects of experience but _____ _____ _____ _____ by _____ the nature of mathematical and geometrical objects such as circles.

플라톤의 실재론은 경험의 모든 측면을 포함하지만, 원과 같은 수학적이고 기하학적인 대상의 특성을 고려함으로써 가장 쉽게 설명된다.

02. He asked the question, what is a circle?

그는 '원이란 무엇인가'라는 질문을 했다.

03. You might indicate a particular example _____ into stone or drawn in the sand.

여러분은 돌에 새겨져 있거나 모래에 그려진 특정한 예를 가리킬 수 있다.

04. However, Plato would _____ _____ _____, if you _____ _____ _____ , you _____ _____ _____ _____ it, _____ indeed any physical circle, _____ perfect.

그러나 플라톤은 여러분이 충분히 면밀히 관찰한다면, 여러분이 그 어느 것도, 진정 어떤 물리적인 원도 완벽하지 않다는 것을 알게 될 것이라고 지적할 것이다.

05. They all possessed flaws, and all _____ _____ _____ _____ and _____ with time.

그것들 모두는 결함을 가지고 있었고, 모두 변화의 영향을 받고 시간이 지남에 따라 쇠하였다.

06. So how can we talk about perfect circles if we cannot _____ _____ or _____ _____?

그렇다면, 우리가 완벽한 원을 실제로 보거나 만질 수 없다면, 그것에 대해 어떻게 이야기할 수 있을까?

07. Plato's extraordinary answer was _____ the world we see _____ a poor reflection of a deeper unseen reality of Forms, or universals, _____ perfect cats _____ perfect mice in perfect circles around perfect rocks.

플라톤의 비범한 대답은 우리가 보는 세상이 완벽한 고양이가 완벽한 암석 주변에서 완벽한 원을 그리며 완벽한 쥐를 쫓는 '형상' 또는 '보편자'라는 더 깊은 보이지 않는 실재의 불충분한 반영물이라는 것이다.

08. Plato believed _____ the Forms or universals _____ the true reality _____ _____ in an _____ but _____ world beyond our senses.

플라톤은 '형상' 또는 '보편자'가 보이지 않지만 우리의 감각을 넘어선 완벽한 세계에 존재하는 진정한 실재라고 믿었다.

26

01. Individuals _____ _____ at a high level in their profession often _____ _____ credibility with others.

자신의 직업에서 높은 수준으로 수행하는 사람들은 흔히 다른 사람들에게 즉각적인 신뢰를 얻는다.

02. People admire them, they want _____ _____ like them, and they feel _____ to them.

사람들은 그들을 존경하고, 그들처럼 되고 싶어 하고, 그들과 연결되어 있다고 느낀다.

03. When they speak, others listen — _____ _____ the area of their skill _____ nothing to do with the advice they give.

그들이 말할 때, 다른 사람들은 비록 그들의 기술 분야가 그들이 주는 조언과 전혀 관련이 없을지라도 경청한다.

04. _____ about a world-famous basketball player.

세계적으로 유명한 농구 선수에 대해 생각해 보라.

05. He _____ _____ more money from endorsements than he ever did _____ basketball.

그는 그가 농구를 하면서 그간 벌었던 것보다 광고로부터 더 많은 돈을 벌었다.

06. Is it _____ _____ his knowledge of the products he endorses?

그것이 그가 광고하는 제품에 대한 그의 지식 때문일까?

07. No. It's _____ _____ _____ _____ _____ _____ with a basketball.

아니다. 그것은 그가 농구로 할 수 있는 것 때문이다.

08. The same can _____ _____ of an Olympic medalist swimmer.

올림픽 메달리스트 수영 선수도 마찬가지이다.

09. People listen to him _____ _____ _____ _____ _____ _____ in the pool.

사람들은 그가 수영장에서 할 수 있는 것 때문에 그의 말을 경청한다.

10. And when an actor tells us we should drive a certain car, we don't listen _____ _____ his expertise on engines.

그리고 어떤 배우가 우리에게 특정 자동차를 운전해야 한다고 말할 때, 우리는 엔진에 대한 그의 전문 지식 때문에 경청하는 것은 아니다.

11. We listen _____ we admire his talent.

우리는 그의 재능을 존경하기 때문에 경청한다.

12. Excellence _____.

탁월함이 연결된다.

13. If you possess a high level of ability in an area, others may desire _____ _____ with you _____ _____ it.

만약 당신이 어떤 분야에서 높은 수준의 능력을 갖고 있다면, 다른 사람들은 그것 때문에 당신과 연결되기를 원할 수도 있다.

28

01. Every time a new medium _____ along — _____ it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you _____ _____ _____ a new kind of goggles, with their own special colors and lenses.

인쇄된 책의 발명이든 텔레비전의 발명이든 SNS의 발명이든, 새로운 매체가 나타나 여러분이 그것을 쓰기 시작할 때마다 여러분은 고유의 색깔과 렌즈를 가진 새 고글을 쓰는 것과 같다.

02. Each _____ of goggles you _____ _____ _____ you see things _____.

여러분이 쓰는 각각의 고글은 세상을 다른 방식으로 바라보게 한다.

03. So when you start to watch television, before you _____ the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as _____ _____ like television itself.

그러므로 여러분이 텔레비전을 보기 시작하면, 그것이 Wheel of Fortune이든 The Wire든, 특정 텔레비전 프로그램의 메시지를 흡수하기 이전에 이미 세상을 텔레비전 그 자체처럼 형성된 것으로 바라보게 된다.

04. That's _____ Marshall McLuhan said _____ every time a new medium _____ along — a new way for humans to communicate — it _____ _____ in it a message.

이러한 이유로 Marshall McLuhan이 새로운 매체, 즉, 인간이 의사소통하는 새로운 방식이 나타날 때마다 그 안에 메시지가 담겨 있다고 말한 것이다.

05. It _____ _____ _____ us _____ _____ the world according to a new set of codes.

새로운 매체는 자연스럽게 우리가 새로운 일련의 방식에 따라 세상을 바라보게 한다.

06. The way information gets to you, McLuhan argued, is more important than the information itself.

McLuhan은 정보가 여러분에게 도달하는 방식이 정보 자체보다 더 중요하다고 주장했다.

07. TV teaches you _____ the world is fast; that it's about surfaces and appearances.

텔레비전은 우리에게 세상은 빠르고, 중요한 것은 표면과 겉모습이라고 가르친다.

C1 빈칸 어법 ① — ② — ③

30

01. The mind is _____ a survival machine.

생각은 본질적으로 생존 기계이다.

02. Attack and defense against other minds, _____, _____, and _____ information — this is _____ it is good at, but it is not at all _____.

정보를 수집하고, 저장하고, 분석하며, 다른 생각에 대한 공격과 수비 — 이것은 생각이 잘 하는 것이지만, 전혀 창의적이지는 않다.

03. All _____ artists create from a place of no-mind, from inner stillness.

모든 진정한 예술가들은 생각이 없는 상태, 즉 내적인 고요함 속에서 창작을 한다.

04. Even great scientists _____ _____ _____ their creative breakthroughs came at a time of mental quietude.

심지어 위대한 과학자들조차도 그들의 창의적인 돌파구는 마음의 정적의 시간에서 생겨났다고 말했다.

05. The _____ result of a nationwide inquiry among America's most famous mathematicians, _____ Einstein, _____ _____ _____ their working methods, _____ _____ thinking "plays only a subordinate part in the brief, decisive phase of the creative act _____."

아인슈타인을 포함한 미국의 가장 유명한 수학자들을 대상으로 그들의 작업 방식을 알아내기 위한 전국적인 조사의 놀라운 결과는 생각은 "창의적인 행동의 짧고, 결정적인 단계에서 단지 부수적인 역할만 할 뿐이다."라는 것이다.

06. So I would say _____ the simple reason _____ the majority of scientists _____ not _____ ____ not _____ they don't know how to think, but _____ they don't know how to stop _____!

그래서 나는 대다수의 과학자들이 창의적이지 않은 단순한 이유는 그들이 생각하는 방법을 몰라서가 아니라 생각을 멈추는 방법을 모르기 때문이라고 말하고 싶다.

32

01. In a study at Princeton University in 1992, research scientists _____ _____ two different groups of mice.

1992년 프린스턴 대학의 한 연구에서, 연구 과학자들은 두 개의 다른 쥐 집단을 관찰했다.

02. One group _____ _____ _____ _____ by _____ the gene for the glutamate receptor.

한 집단은 글루타민산염 수용체에 대한 유전자를 변형함으로써 지적으로 우월하게 만들어졌다.

03. Glutamate is a brain chemical _____ _____ necessary in learning.

글루타민산염은 학습에 필수적인 뇌 화학 물질이다.

04. The other group _____ genetically _____ to be intellectually inferior, also _____ by _____ the gene for the glutamate receptor.

다른 집단도 역시 글루타민산염 수용체에 대한 유전자를 변형함으로써, 지적으로 열등하도록 유전적으로 조작되었다.

05. The smart mice _____ then _____ in standard cages, while the inferior mice _____ _____ in large cages with toys and exercise wheels and with lots of social interaction.

그 후 똑똑한 쥐들은 표준 우리에서 길러졌고, 반면에 열등한 쥐들은 장난감과 운동용 쳇바퀴가 있고 사회적 상호작용이 많은 큰 우리에서 길러졌다.

06. At the end of the study, although the intellectually inferior mice _____ genetically _____, they were able to perform just as well as their genetic superiors.

연구가 끝날 무렵, 비록 지적 능력이 떨어지는 쥐들이 유전적으로 장애가 있었지만, 그들은 그들의 유전적인 우월군들만큼 잘 수행할 수 있었다.

07. This was a real triumph for nurture over nature.

이것은 천성(선천적 성질)에 대한 양육(후천적 환경)의 진정한 승리였다.

08. Genes _____ _____ _____ or _____ based on _____ _____ around you.

유전자는 여러분 주변에 있는 것에 따라 작동하거나 멈춘다.

34

01. Participants in a study _____ _____ _____ _____ questions like “Why does the moon _____ phases?"

한 연구의 참가자들이 '달은 왜 상을 가지고 있을까'와 같은 질문들에 답하도록 요청받았다.

02. Half the participants _____ _____ _____ _____ for the answers on the internet, _____ _____ _____ _____ _____ _____ _____ _____ _____.

참가자의 절반은 인터넷에서 답을 검색하라는 말을 들었고 나머지 절반은 그렇게 하도록 허용되지 않았다.

03. Then, in the second part of the study, _____ of the participants _____ _____ with a new set of questions, such as "Why does Swiss cheese have holes?"

그 다음, 연구의 두 번째 단계에서 모든 참가자는 '스위스 치즈에는 왜 구멍이 있을까'와 같은 일련의 새로운 질문들을 제시받았다.

04. These questions _____ _____ to _____ _____ _____ _____ the first part of the study, so participants _____ _____ the internet _____ absolutely no advantage over those _____ _____.

이 질문들은 연구의 첫 번째 단계에서 질문받았던 것들과는 관련이 없어서 인터넷을 사용한 참가자들은 그러지 않은 참가자들보다 이점이 전혀 없었다.

05. You would think _____ both sets of participants would be _____ sure or unsure about _____ _____ _____ _____ _____ the new questions.

여러분은 두 집단의 참가자들이 새로운 질문들에 얼마나 잘 대답할 수 있을지에 대해 동일한 정도로 확신하거나 확신하지 못할 것으로 생각할 것이다.

06. But those _____ _____ the internet in the first part of the study _____ _____ as more _____ than those _____ _____, even about questions they _____ _____ online _____.

그러나 연구의 첫 번째 단계에서 인터넷을 사용했던 참가자들은 자신이 온라인에서 검색하지 않았던 질문들에 대해서조차 그러지 않았던 참가자들보다 스스로가 더 많이 알고 있다고 평가했다.

07. The study suggests _____ _____ access to unrelated information _____ _____ _____ _____ _____ their intellectual confidence.

이 연구는 관련 없는 정보에 접근하는 것이 그들의 지적 자신감을 부풀리기에 충분했다는 것을 시사한다.

36

01. _____ of the brain as a city.

뇌를 도시라고 생각해보라.

02. If you _____ _____ look out over a city and _____ "where _____ the economy _____?" _____ _____ there's no good answer to the question.

만약 당신이 도시를 내다보며 "경제가 어디에 위치해 있나요?"라고 묻는다면 그 질문에 대한 좋은 답이 없다는 것을 알게 될 것이다.

03. Instead, the economy _____ from the interaction of _____ the elements — from the stores and the banks to the merchants and the customers.

대신, 경제는 상점과 은행에서 상인과 고객에 이르기까지 모든 요소의 상호 작용으로부터 나타난다.

04. And _____ _____ _____ with the brain's operation: it doesn't _____ in one spot.

그리고 그것은 뇌의 작동도 그러하다: 그것은 한 곳에서 일어나지 않는다.

05. Just as in a city, no neighborhood of the brain _____ in isolation.

도시에서처럼, 뇌의 어떤 지역도 독립적으로 작동하지 않는다.

06. In brains and in cities, everything _____ from the interaction between residents, at all scales, _____ and _____.

뇌와 도시 안에서, 모든 것은, 모든 규모에서, 근거리에서든 원거리에서든, 거주자들 간의 상호 작용으로부터 나타난다.

07. Just as trains bring materials and textiles into a city, _____ _____ _____ into the economy, so the raw electrochemical signals from sensory organs _____ _____ along superhighways of neurons.

기차가 자재와 직물을 도시로 들여오고, 그것이 경제 속으로 처리되는 것처럼, 감각 기관으로부터의 가공되지 않은 전기화학적 신호는 뉴런의 초고속도로를 따라서 전해진다.

08. There the signals _____ processing and transformation into our conscious reality.

거기서 신호는 처리와 우리의 의식적인 현실로 변형을 겪는다.

38

01. Over time, babies _____ expectations about _____ _____ _____ _____ _____ _____ .

시간이 지나면서 아기는 자신이 어떤 소리를 언제 들을지에 대한 기대를 형성한다.

02. They _____ in memory the sound patterns _____ _____ on a regular basis.

그들은 규칙적으로 발생하는 소리 패턴을 기억한다.

03. They make hypotheses like, "If I _____ this sound first, it probably _____ _____ _____ by that sound."

그들은 '내가 '이' 소리를 먼저 들으면 그것에 아마도 '저' 소리가 따라올 것이다'와 같은 가설을 세운다.

04. Scientists conclude _____ _____ of babies' skill in _____ language _____ due to their ability _____ _____ statistics.

과학자들은 언어를 배우는 아기의 기술의 상당 부분이 그들의 통계를 계산하는 능력 때문이라고 결론짓는다.

05. For babies, this means _____ they appear to pay close attention to the patterns _____ _____ in language.

아기에게 있어 이것은 그들이 언어에서 반복되는 패턴에 세심한 주의를 기울이는 것처럼 보인다는 것을 의미한다.

06. They remember, in a systematic way, _____ _____ _____ _____ , _____ _____ order, _____ _____ intervals, and _____ _____ changes of pitch.

그들은 소리가 얼마나 자주, 어떤 순서로, 어떤 간격으로 그리고 어떤 음조의 변화를 가지고 발생하는지를 체계적인 방식으로 기억한다.

07. This memory store _____ them _____ _____ , within the neural circuits of their brains, the frequency of sound patterns and _____ _____ this knowledge _____ _____ predictions about the meaning in patterns of sounds.

이 기억 저장소는 그들이 자신의 뇌의 신경 회로 내에서 소리 패턴의 빈도를 추적하고, 소리 패턴의 의미에 대한 예측을 하기 위해 이 지식을 사용하도록 해 준다.

40

01. Research has _____ _____ athletes are less likely _____ _____ in unacceptable behavior than _____ non-athletes.

운동 선수는 선수가 아닌 사람들보다 받아들여지지 않는 행동을 덜 할 것이라고 연구는 확인했다.

02. However, moral reasoning and good sporting behavior _____ _____ _____ as athletes progress to higher competitive levels, in part _____ _____ the _____ emphasis on winning.

그러나 부분적으로 승리에 대한 강조가 커지기 때문에 운동 선수가 더 높은 경쟁적 수준까지 올라감에 따라서 도덕적 분별력과 바람직한 스포츠 행위가 감소하는 것 같다.

03. Thus winning can be a _____ sword in _____ character development.

그래서 승리라는 것은 인성 함양을 가르치는 데 있어서 양날의 검이 될 수 있다.

04. Some athletes may want _____ _____ so much _____ they lie, cheat, and _____ team rules.

어떤 선수는 너무나 이기려고 하다 보니 그 결과 거짓말하고 속이고 팀 규칙을 위반한다.

05. They may develop undesirable character traits _____ can enhance their ability _____ _____ in the short term.

그들은 단시간에 이기고자 자신의 능력을 강화할 수 있는 바람직하지 못한 인격 특성을 계발할지 모른다.

06. However, when athletes _____ the temptation _____ _____ in a dishonest way, they can develop positive character traits _____ _____ a lifetime.

그러나 선수가 부정한 방법으로 이기고자 하는 유혹에 저항할 때 그들은 일생 동안 지속되는 긍정적인 인격 특성을 계발할 수 있다.

07. Character is a _____ behavior, and a sense of fair play develops only if coaches plan _____ _____ those lessons _____.

인성이라는 것은 학습되는 행동이며 그러한 교훈을 체계적으로 가르치고자 계획할 때만 페어 플레이 정신은 발달한다.

2

01. 오리너구리를 예로 들어 보자. 우리가 그들의 털을 매우 가까이 확대하면 각 가닥이 다르게 보인다.

Take platypuses. (their fur / zoom / we / so closely / in / to / might) (appears / each hair / that / different)

▶▶

02. 우리는 또한 그것이 하나의 동일한 개체로 보이는 정도까지 축소할 수도 있다.

(also / we / the extent / zoom out / to / might) (object / appears / it / as / uniform / where / a single)

▶▶

03. 가능한 모든 관점은 특정 측면을 강조하고 다른 측면을 외면하는 것을 포함한다.

(involves / and / certain aspects / others / every possible perspective / emphasize / ignore)

▶▶

4

04. 기억이 어쨌든 사고하는 우리의 능력의 기반이 될 뿐만 아니라 그것은 우리의 경험의 내용과 다가올 수년간 우리가 그것을 보존하는 방식을 규정한다.

(memory / for / experiences / underlie / only / and / to / it / our / at / all / content / of / does / our / defines / think / how / ability / to / preserve / Not / we / them / come / the / years)

▶▶

05. 만약 내가 심장 부전을 앓고 인공 심장에 의존한다 해도 나는 역시 여느 때의 나일 것이다.

(depend / to / would / no / heart / suffer / I / failure / an / upon / heart / be / artificial / I / and / from / myself / were / less / If)

▶▶

06. 만약 내가 사고로 한 팔을 잃고 그것을 인공 팔로 교체한다 해도 나는 여전히 본질적으로 '나'일 것이다.

(I / lost / an / would / artificial / accident / it / with / and / an / arm / If / essentially / arm / I / me / an / replaced / still / be / in / had)

▶▶

6

07. 주의 집중이 뇌의 재구조화로 이어진다는 과학적 증거는 많이 있다.

(scientific evidence / a lot / there's / demonstrate / of) (the brain / the reshaping / attention / that / to / focused / of / leads)

▶▶

08. (예를 들어 사냥하거나 사냥감이 되는 것을 피하기 위해) 소리를 알아채는 것에 대한 보상을 받은 동물에서 우리는 뇌의 청각 중추가 훨씬 더 큰 것을 발견한다.

(sound / reward / for / animals / noticing / in) (to hunt or to avoid being hunted for example), (we / auditory centers / the brain / much larger / in / find)

▶▶

09. 요점은 우리가 어디에 주의를 기울이고 무엇을 연습하느냐에 따라 뇌의 물리적 구조가 달라진다는 것이다.

(the brain / the physical architecture / the point / of / is / changes / that) (what / our attention / and / doing / according / where / direct / we / practice / to / we)

▶▶

8

10. '기펜재'는 전통적인 수요 법칙이 적용되지 않는 특별한 유형의 상품이다.

(which / special / demand / goods / not / products / of / are / law / types / does / of / for / Giffen / traditional / apply / the)

▶▶

10

11. 만약 매일 하고자 착수하는 일을 성취함으로써 얻게 되는 자신감을 원한다면 일이 얼마나 시간이 걸릴지 아는 것이 중요하다.

(that / want / from / comes / you / the confidence / achieving / if) (do / set out / what / each day / you / to), then (how / to / it's / understand / are going to take / things / important / long)

▶▶

12. 이용할 수 있는 시간이 짧은 시간밖에 없을 때 그런 과제를 위해 준비를 갖추려고 애쓰는 것은 무의미하다.

(trying / for / gear up / there / a task / in / no point / such / is / to) (a short period / only / when / available / have / you)

▶▶

12

13. 할인된 수프는 세 가지 조건 중 하나의 조건으로 판매되었다: 구매량에 제한이 없는 하나의 대조군, 또는 고객이 4개의 캔으로 제한되거나 12개의 캔으로 제한되는 두 개의 실험군.

(of / three conditions / sell / one / the discounted soup / in): (purchases / the volume / on / there / a control / no limit / where / of / was), or (either / where / two tests / four or twelve cans / to / limit / customers / or)

▶▶

14. 그것은 주장된 데이터에 의존하지 않았고, 소비자들이 다르게 행동할지도 모르는 실험실에서 이루어진 것도 아니었다.

(data / didn't rely / it / claim / on), (where / held / it / nor / behave / consumers / in / differently / was / might / a laboratory)

▶▶

14

15. 참여와 성취의 핵심은 학생들에게 그들이 관심 있어 할 적절한 글을 제공하는 것이다.

(with / engagement and achievement / relevant texts / providing / to / a key / students / is) (will be interested / in / they)

▶▶

16. 그녀는 그들이 학습에 있어 읽기를 피했고 그것을 우회하거나 다른 전략들로 보완할 방법을 발견했을 것이라고 알아낼 것을 예상했으나, 정반대를 알아냈다.

(that / while / had avoided / expected / reading / find / they / she / to) and (to / discovered / it / ways / bypass) or (learning / the opposite / with / other strategies / compensate / found / she / for)

▶▶

17. 중요한 것은 그들이 더 많이 알아내기 위해 탐욕스럽게 읽었다는 것이다.

(they / find out / read / that / what / more / was / to / voraciously / mattered)

▶▶

16

18. 어떤 시각적 정보는 명백히 눈으로 들어오지만, 그것은 짧아지거나 약화되어서 정상적으로 처리되지 않는데, 이는 다른 감각 체계도 마찬가지다.

(apparently / some visual information / in / gets), but (as / normally / weaken / it / not / shorten / or / process / it); (the other sensing systems / with / same)

▶▶

19. 그러나 수면이 그것 없이는 불가능하기 때문에 그것(지각 이탈)은 그것(수면)의 정의에 필수적인 것으로 보여진다.

But (would be / without / as / it / impossible / sleep), (its definition / essential / it / to / seems)

▶▶

18

20. 의사, 간호사, 관제실 운영자, 주식 거래자, 조종사와 같은 중요한 역할을 담당하는 전문가들에게 심각한 결과를 초래한 갑작스러운 방해의 사례가 많이 기록되어 있지만, 갑작스러운 방해는 일상생활에서 대부분의 사람들에게도 영향을 미쳐 업무 생산성을 떨어뜨리며 일반적으로 스트레스 수준을 높인다.

(sudden disruptions / while / cases / document / of / there / many) (critical roles / as / significant consequences / that / doctors, nurses, control room operators, stock traders, and pilots / professionals / for / such / in / have had), (our everyday lives / most / also / they / us / of / impact / in), (increase / and / work productivity / slow down / stress levels / generally)

▶▶

20

21. 아이들이 일 년 내내 원했던 장난감은 트리 아래 선물 상자에서 꺼내진 후 며칠 뒤에 버려진다.

(are thrown away / toys children wanted / several days after / all year long) (from gift boxes / under the tree / they are taken).

▶▶

22. 그 현상은 사람들의 상호 작용, 특히 관계가 형성되는 초기 단계에도 유효하다.

(also holds true / for human interaction / the phenomenon), (of a developing relationship / particularly /in the early stages).

▶▶

23. 사람은 장기적인 관계를 목표로 하고 있는 사람에게 자기 자신을 항상 쉽게 만날 수 있게 해서는 안 된다.

(readily available / should not always make / an individual / himself or herself) (they are targeting / to the person) (for a longer-term relationship).

▶▶

22

24. 사람들은 그들이 사는 물리적인 그리고 사회적인 환경의 영향을 받지만, 그들은 또한 그 환경들과 상호 작용하고, 그리고 변화시킴으로써, 그들의 발달에 영향을 주는 역할을 한다.

(interacting / also / are / influencing / they / the / People / by / which / with / role / influenced / social / contexts / live / by / in / they / and / in / physical / changing / and / development / play / but / their / contexts / a / those)

25. 그 유아는 어른들을 친밀한 연결로 끌어들여서, 일대일 상호작용을 하고 학습의 기회를 만든다.

(brings / making / infant / close / The / into / opportunities / learning / one-on-one / and / interactions / contact / for / adults / creating)

24

26. 그러나 플라톤은 여러분이 충분히 면밀히 관찰한다면, 여러분이 그 어느 것도, 진정 어떤 물리적인 원도 완벽하지 않다는 것을 알게 될 것이라고 지적할 것이다.

However, (if / would point out / closely / looked / that / enough / you / Plato), (nor / would see / was / it / you / perfect / neither / any physical circle / that / indeed)

27. 그것들 모두는 결함을 가지고 있었고, 모두 변화의 영향을 받고 시간이 지남에 따라 쇠하였다.

(change / all / with / and / they / time / decayed / flaws / possessed / were / and / subject / to / all)

28. 플라톤은 '형상' 또는 '보편자'가 보이지 않지만 우리의 감각을 넘어선 완벽한 세계에 존재하는 진정한 실재라고 믿었다.

(the true reality / that / or / universals / Plato / are / the Forms / believed) (perfect world / but / that / an invisible / our senses / beyond / in / exists)

26

29. 그들이 말할 때, 다른 사람들은 비록 그들의 기술 분야가 그들이 주는 조언과 전혀 관련이 없을지라도 경청한다.

(others / they / listen / when / speak) - (the advice / to / with / the area / has / even if / their skill / give / do / nothing / they / of)

▶▶

30. 그는 그가 농구를 하면서 그간 벌었던 것보다 광고로부터 더 많은 돈을 벌었다.

(ever / has made / endorsements / than / did playing basketball / he / more money / from / he)

▶▶

28

31. 여러분이 쓰는 각각의 고글은 세상을 다른 방식으로 바라보게 한다.

(makes / each set / things / put on / see / you / of / differently / goggles / you)

▶▶

30

32. 심지어 위대한 과학자들조차도 그들의 창의적인 돌파구는 마음의 정적의 시간에서 생겨났다고 말했다.

(have reported / that / even great scientists) (at a time of mental quietude / their creative breakthroughs /came).

▶▶

33. 그래서 나는 대다수의 과학자들이 창의적이지 않은 단순한 이유는 그들이 생각하는 방법을 몰라서가 아니라 생각을 멈추는 방법을 모르기 때문이라고 말하고 싶다.

So (that / I would say) (are not creative / why / the simple reason / the majority of scientists) (how to think / is not because / they don't know), (they don't know / how to stop thinking / but because)!

▶▶

32

34. 다른 집단도 역시 글루타민산염 수용체에 대한 유전자를 변형함으로써, 지적으로 열등하도록 유전적으로 조작되었다.

(be / the other group / intellectually inferior / was genetically manipulated / to), (the glutamate receptor / the gene / by / also / for / modifying / done)

35. 연구가 끝날 무렵, 비록 지적 능력이 떨어지는 쥐들이 유전적으로 장애가 있었지만, 그들은 그들의 유전적인 우월군들만큼 잘 수행할 수 있었다.

(of / the end / the study / at), (were genetically handicapped / the intellectually inferior / although), (well / as / their genetic superiors / were able to perform / just / they / as)

34

36. 참가자의 절반은 인터넷에서 답을 검색하라는 말을 들었고 나머지 절반은 그렇게 하도록 허용되지 않았다.

(for / half the participants / the internet / to / tell / on / the answers / search), (not allow / the other half / do / while / so / to)

37. 이 질문들은 연구의 첫 번째 단계에서 질문받았던 것들과는 관련이 없어서 인터넷을 사용한 참가자들은 그러지 않은 참가자들보다 이점이 전혀 없었다.

(hadn't / over / be / advantage / those / ask / of / so / the study / the internet / use / participants / the ones / absolutely / questions / who / who / unrelated / had / these / no / the first part / to / during)

38. 그러나 연구의 첫 번째 단계에서 인터넷을 사용했던 참가자들은 자신이 온라인에서 검색하지 않았던 질문들에 대해서조차 그러지 않았던 참가자들보다 스스로가 더 많이 알고 있다고 평가했다.

But (knowledgeable / who / they / the first part / as / searched / than / who / for / even / those / hadn't / in / about / questions / more / rate / online / of / them / used / the study / those / the internet / hadn't)

36

39. 만약 당신이 도시를 내다보며 "경제가 어디에 위치해 있나요?"라고 묻는다면 그 질문에 대한 좋은 답이 없다는 것을 알게 될 것이다.

(look out / ask / to / were / if / and / a city / you / over) “(the economy / where / locate)?” (no / see / the question / to / good answer / you’d / to / there’s)

▶▶

40. 기차가 자재와 직물을 도시로 들여오고, 그것이 경제 속으로 처리되는 것처럼, 감각 기관으로부터의 가공되지 않은 전기화학적 신호는 뉴런의 초고속도로를 따라서 전해진다.

(into / just as / materials and textiles / a city / trains / bring), (the economy / become / which / into / process), so (sensory organs / of / along / transport / the raw electrochemical signals / neurons / superhighways / from)

▶▶

38

41. 시간이 지나면서 아기는 자신이 어떤 소리를 언제 들을지에 대한 기대를 형성한다.

(what / babies / about / will / time / hear / Over / they / sounds / expectations / when / construct)

▶▶

42. 아기에게 있어 이것은 그들이 언어에서 반복되는 패턴에 세심한 주의를 기울이는 것처럼 보인다는 것을 의미한다.

(pay / this / babies / that / that / attention / language / close / to / means / appear / repeat / For / to / they / the / patterns / in)

▶▶

40

43. 운동 선수는 선수가 아닌 사람들보다 받아들여지지 않는 행동을 덜 할 것이라고 연구는 확인했다.

(that / research / has confirmed) (in unacceptable behavior / are less likely / athletes / to participate) (than are non-athletes).

▶▶

44. 어떤 선수는 너무나 이기려고 하다 보니 그 결과 거짓말하고 속이고 팀 규칙을 위반한다.

(so much / some athletes / may want to win) (team rules / that they lie, cheat, / and break).

*anthropologist: 인류학자 **platypus: 오리너구리

① We can only adopt one point of view at a time.
② Each strand looks separate when we zoom in on the platypus' coat very closely.
③ Platypuses can not only be treated as individuals but also as part of larger units.
④ All perspectives we choose to understand the world entail considering every possible aspect.
⑤ According to Gregory Bateson, we are inclined to comprehend the world by concentrating on certain aspects of it.

Not only does memory underlie our ability to think at all, it defines the content of our experiences and how we preserve them for years to come. Memory makes us who we are. (A)_____, if I were to suffer from heart failure and depend upon an artificial heart, I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories remain intact, I will continue to be the same person, no matter which part of my body (other than the brain) is replaced. (B)_____, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," though his body remains unchanged.

① Some tasks can only be started if the amount of time available is large.

② You should make it a habit to approximate the time required for items on your 'things to do' list.

③ It is useless to prepare for a task that requires a lot of time to do when you don't have much time.

④ There is nothing wrong with excessive confidence in being able to achieve something in a certain amount of time.

⑤ If you want to gain confidence by accomplishing what you begin to do every day, you need to know how long things will take.

Restricting the number of items customers can buy boosts sales. Brian Wansink, Professor of Marketing at Cornell University, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control, where there was no limit on the volume of purchases, or two tests, where customers were limited to either four or twelve cans. In the unlimited condition shoppers bought 3.3 cans on average, whereas in the scarce condition, when there was a limit, they bought 5.3 on average. This suggests _____. The findings are particularly strong because the test took place in a supermarket with genuine shoppers. It didn't rely on claimed data, nor was it held in a laboratory where consumers might behave differently.

*tactic: 전략

① demand creates supply
② scarcity encourages sales
③ goods that are too cheap won't sell
④ sales depend on the location of the store
⑤ the more expensive it is, the better it sells

Toys children wanted all year long are thrown away several days after they are taken from gift boxes under the tree. The phenomenon also holds true for human interaction, particularly in the ③early stages of a developing relationship. The common dating rule has scientific ④merit. An individual should not always make himself or herself readily ⑤available to the person they are targeting for a longer-term relationship. A certain level of unavailability will make you more of a mystery and a challenge.

a poor reflection / of Forms, or universals /
is / of a deeper unseen reality / the world we see /

17 다음 글의 요지를 아래와 같이 쓸 때, 빈칸에 들어갈 알맞은 말을 지문에서 찾아 알맞게 쓰시오.

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

Plato's realism suggests that the world we see is an inadequate _____ of the true reality of Forms or universals, which exist in a(n) _____ but perfect world.

So when you start to watch television, before you ⓑabsorb the message of any particular TV show—whether it's Wheel of Fortune or The Wire—(B)여러분은 세상을 텔레비전 그 자체처럼 형성된 것으로 바라보기 시작한다. That's why Marshall McLuhan said that every time a new medium comes along—a new way ⓒhumans to communicate—it has buried in it a message. It is gently guiding us to see the world according to a new set of codes. The way information ⓓgetting to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; ⓔwhich it's about surfaces and appearances.

13 윗글의 밑줄 친 ⓐ~ⓔ 중, 어법상 어색한 것을 세 개 골라 기호를 쓰고 알맞게 고쳐 쓰시오.

기호 알맞게 고친 표현

(1) _____: _____

(2) _____: _____

(3) _____: _____

14 윗글의 밑줄 친 (A)의 우리말을 주어진 <조건>에 알맞게 영작하시오.

<조건>
— 목적격 관계대명사는 생략하고 쓸 것
— <보기>의 단어를 사용할 것 (필요시 변형할 것)
— 12단어로 영작할 것

<보기> see / put / each / make / set / things / goggles

15 윗글의 밑줄 친 (B)의 우리말을 주어진 <조건>에 알맞게 영작하시오.

<조건>
— to부정사와 동명사를 차례대로 각각 한 번씩 사용할 것
— 재귀대명사를 그것이 강조하는 단어의 바로 뒤에 쓸 것
— <보기>의 단어를 사용할 것 (필요시 변형할 것)
— 12단어로 영작할 것

<보기> as / like / see / start / shape / television

16 다음 글의 요지를 아래와 같이 쓸 때, 빈칸에 들어갈 알맞은 말을 지문에서 찾아 한 단어로 각각 쓰시오. (필요시 변형할 것)

Every time a new medium comes along—whether it's the invention of the printed book, or TV, or SNS—and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses. Each set of goggles you put on makes you see things differently. So when you start to watch television, before you absorb the message of any particular TV show—whether it's Wheel of Fortune or The Wire—you start to see the world as being shaped like television itself. That's why Marshall McLuhan said that every time a new medium comes along—a new way for humans to communicate—it has buried in it a message. It is gently guiding us to see the world according to a new set of codes. The way information gets to you, McLuhan argued, is more important than the information itself. TV teaches you that the world is fast; that it's about surfaces and appearances.

A new medium leads us to perceive the _____ through a(n) _____ perspective based on a new set of codes within it, and the _____ it presents information is more important than the information itself.

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner **(A)[stillness / restlessness]**. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a **(B)[secondary / crucial]** part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to **(C)[cease / keep]** thinking!

01 위 글의 괄호 (A), (B), (C) 안에서 문맥에 맞는 낱말로 가장 적절한 것은?

(A)	(B)	(C)
① stillness	secondary	cease
② stillness	crucial	keep
③ stillness	secondary	keep
④ restlessness	crucial	keep
⑤ restlessness	secondary	cease

02 위 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 ⓐ, ⓑ에 들어갈 말로 가장 적절한 것은?

Only if you are able to be conscious without thought can you use your mind ⓐ_____, so it's critical to regain your internal ⓑ_____.

ⓐ	ⓑ
① creatively	potential
② creatively	maturity
③ creatively	silence
④ precisely	potential
⑤ precisely	silence

03 다음 글에서 전체 흐름과 관계없는 문장은?

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is what it is good at, but it is not at all creative. ①**All** true artists create from a place of no-mind, from inner stillness. ②**Even** great scientists have reported that their creative breakthroughs came at a time of mental quietude. ③**The** surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." ④**Thought** cannot exist without consciousness, but consciousness doesn't need thought. ⑤**So** I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

*quietude: 정적 **subordinate: 부수적인

04 다음 글의 괄호 (A), (B), (C) 안에서 어법에 맞는 표현으로 가장 적절한 것은?

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is **(A)[what / how]** it is good at, but it is not at all creative. All true artists create from a place of no-mind, from inner stillness. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, **(B)[being / was]** that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop **(C)[to think / thinking]**!

*quietude: 정적 **subordinate: 부수적인

(A)	(B)	(C)
① what	being	to think
② what	was	thinking
③ what	was	to think
④ how	was	thinking
⑤ how	being	thinking

05 위 글의 빈칸 (A)에 들어갈 말을 주어진 철자로 시작하여 각각 쓰시오.

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is what it is good at, but it is not at all creative. All true artists create from a place of no-mind, from **(A)**i_____ s_____. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, was that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative is not because they don't know how to think, but because they don't know how to stop thinking!

*quietude: 정적 **subordinate: 부수적인

06 위 글을 읽고 아래 질문에 대한 답을 주어진 단어로 시작하여 총 6단어로 완성하시오. (단, 본문의 단어만을 사용할 것)

Q. What is the important factor to be creative?

A. To recognize _____ _____ _____ _____

07 다음 글의 밑줄 친 ①~⑤ 중 어법상 **틀린** 것은? (2가지)

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is ①how it is good at, but it is ②not at all creative. All true artists create from a place of no-mind, ③from inner stillness. Even great scientists have reported that their creative breakthroughs came at a time of mental quietude. The surprising result of a nationwide inquiry among America's most famous mathematicians, including Einstein, to find out their working methods, ④were that thinking "plays only a subordinate part in the brief, decisive phase of the creative act itself." So I would say that the simple reason why the majority of scientists are not creative ⑤is not because they don't know how to think, but because they don't know how to stop thinking!

08 다음 글을 <보기>와 같이 요약하고자 할 때, 빈칸에 들어갈 말로 가장 적절한 것은?

The mind is essentially a survival machine. Attack and defense against other minds, gathering, storing, and analyzing information—this is what it is good at, but it is not at all creative. Over time, babies ⓐconstruct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate ⓑstatistics. For babies, this means that they appear to pay close attention to the patterns that repeat in language. They ⓒremember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store ⓓallows them to track, within the neural circuits of their brains, the frequency of sound patterns and to ⓔmisuse this knowledge to make predictions about the meaning in patterns of sounds.

02 위 글의 제목으로 가장 적절한 것은?

① A Strategy for Teaching Language: Talk More Than Your Baby
② The Importance of Exposing Babies to Various Sounds
③ Babies Who Predict Regular Sound Pattern by Analyzing Data
④ How Babies Develop Their Communication Skills
⑤ Ways to Give Infants a Firm Grasp of Statistics

03 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

Over time, babies construct expectations about what sounds they will hear when. They hold in memory the sound patterns that occur on a regular basis. They make hypotheses like, "If I hear this sound first, it probably will be followed by that sound." Scientists conclude that much of babies' skill in learning language is due to their ability to calculate statistics. For babies, this means that they appear to pay close attention to _____. They remember, in a systematic way, how often sounds occur, in what order, with what intervals, and with what changes of pitch. This memory store allows them to track, within the neural circuits of their brains, the frequency of sound patterns and to use this knowledge to make predictions about the meaning in patterns of sounds.

① a variety of sound they make
② the patterns that repeat in language
③ numbers and figures they are exposed to
④ only the words that they hear most often
⑤ stress patterns in words used by caregivers

01 다음 글에서 밑줄 친 부분이 의미하는 바로 가장 적절한 것은?

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can enhance their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

① we need a double-edged sword to win any life challenge
② we may go days at a time without any competition
③ athletes have to learn how to handle and address a sword
④ cooperating is much more important than winning itself
⑤ we can develop either optimistic or pessimistic character by winning

02 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes.

(A) Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can enhance their ability to win in the short term.
(B) However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.
(C) However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development.

① (C)-(A)-(B)
② (A)-(C)-(B)
③ (B)-(A)-(C)
④ (C)-(B)-(A)
⑤ (B)-(C)-(A)

However, moral reasoning and good sporting behavior seem to decline as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much ②that they lie, cheat, and break team rules. They may develop ③undesirably character traits that can enhance their ability to win in the short term. However, when athletes resist the temptation ④to win in a dishonest way, they can develop positive character attributes that last a lifetime. Character is a ⑤learned behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

04 (A), (B), (C)의 각 네모 안에서 문맥에 맞는 낱말로 가장 적절한 것은?

Research has confirmed that athletes are less likely to participate in unacceptable behavior than are non-athletes. However, moral reasoning and good sporting behavior seem to (A)[decline / increase] as athletes progress to higher competitive levels, in part because of the increased emphasis on winning. Thus winning can be a double-edged sword in teaching character development. Some athletes may want to win so much that they lie, cheat, and break team rules. They may develop undesirable character traits that can (B)[enhance / reduce] their ability to win in the short term. However, when athletes resist the temptation to win in a dishonest way, they can develop positive character traits that last a lifetime. Character is a (C)[inherent / learned] behavior, and a sense of fair play develops only if coaches plan to teach those lessons systematically.

	(A)	(B)	(C)
①	decline	reduce	inherent
②	increase	enhance	inherent
③	increase	enhance	learned
④	increase	reduce	learned
⑤	decline	enhance	learned
