20

Unfortunately, many people don't take [ⓐ **public** / ⓑ **personal**] responsibility for their own growth. Instead, they simply [ⓐ **walk** / ⓑ **run**] the race laid out for them. They do [ⓐ **well** / ⓑ **poorly**] enough in school to keep advancing. Maybe they manage to get a [ⓐ **bad** / ⓑ **good**] job at a [ⓐ **well-run** / ⓑ **poorly-run**] company. But so many think and act as if their learning journey [ⓐ **starts** / ⓑ **ends**] with college. They have checked all the boxes in the life that was laid out for them and now [ⓐ **lack** / ⓑ **have**] a road map describing the [ⓐ **right** / ⓑ **wrong**] ways to move forward and continue to grow. In truth, that's when the journey really [ⓐ **begins** / ⓑ **ends**]. When school is finished, your growth becomes [ⓐ **mandatory** / ⓑ **voluntary**]. Like healthy eating habits or a regular exercise program, you need to [ⓐ **withdraw** / ⓑ **commit**] to it and devote thought, time, and energy to it. Otherwise, it simply won't happen — and your life and career are likely to [ⓐ **stop** / ⓑ **continue**] progressing as a result.

21

Many people take the [ⓐ **nonsensical** / ⓑ **commonsense**] view that color is an [ⓐ **objective** / ⓑ **subjective**] property of things, or of the light that bounces off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as [ⓐ **real** / ⓑ **fake**] as the leaves. Others argue that color doesn't inhabit the [ⓐ **physical** / ⓑ **imaginary**] world at all but exists only in the eye or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be [ⓐ **colorful** / ⓑ **colorless**] — and so would everything else. They say there is no such thing as color; there are only the people who see it. Both positions are, in a way, [ⓐ **correct** / ⓑ **incorrect**]. Color is objective and subjective — "the place," as Paul Cézanne put it, "where our brain and the universe meet." Color is [ⓐ **vanished** / ⓑ **created**] when light from the world is registered by the eyes and interpreted by the brain.

22

When writing a novel, research for information needs to be done. The thing is that some kinds of fiction demand a [ⓐ **higher** / ⓑ **lower**] level of detail: crime fiction, for example, or scientific thrillers. The information is never [ⓐ **hard** / ⓑ **easy**] to find; one website for authors even organizes trips to police stations, so that crime writers can get it right. Often, a polite letter will earn you [ⓐ **permission** / ⓑ **prohibition**] to visit a particular location and record all the details that you need. But remember that you will [ⓐ **repel** / ⓑ **drive**] your readers to boredom if you think that you need to pack everything you discover into your work. The details that matter are those that reveal the human experience. The [ⓐ **crucial** / ⓑ **trivial**] thing is telling a story, finding the characters, the [ⓐ **tension** / ⓑ **harmony**], and the [ⓐ **agreement** / ⓑ **conflict**] — not the train timetable or the building blueprint.

23

Nearly everything has to go through your mouth to get to the rest of you, from [ⓐ **food** / ⓑ **poison**] and [ⓐ **vacuum** / ⓑ **air**] to [ⓐ **sanitizers** / ⓑ **bacteria**] and [ⓐ **vaccines** / ⓑ **viruses**]. A [ⓐ **healthy** / ⓑ **sick**] mouth can help your body get what it needs and [ⓐ **prevent** / ⓑ **allow**] it from harm — with [ⓐ **insufficient** / ⓑ **adequate**] space for air to travel to your lungs, and [ⓐ **healthy** / ⓑ **unhealthy**] teeth and gums that [ⓐ **encourage** / ⓑ **prevent**] harmful microorganisms from entering your bloodstream. From the moment you are created, oral health [ⓐ **affects** / ⓑ **ignores**] every aspect of your life. What happens in the mouth is usually just the [ⓐ **base** / ⓑ **tip**] of the iceberg and a reflection of what is happening in other parts of the body. [ⓐ **Excellent** / ⓑ **Poor**] oral health can be a cause of a disease that [ⓐ **affects** / ⓑ **bypasses**] the entire body. The microorganisms in an [ⓐ **healthy** / ⓑ **unhealthy**] mouth can enter the bloodstream and travel anywhere in the body, posing [ⓐ **serious** / ⓑ **minor**] health risks.

A1 어휘 선택 1

24

Kids [ⓐ **enjoy** / ⓑ **tire**] of their toys, college students get [ⓐ **sick** / ⓑ **fond**] of cafeteria food, and sooner or later most of us [ⓐ **lose** / ⓑ **maintain**] interest in our favorite TV shows. The bottom line is that we humans are [ⓐ **hardly** / ⓑ **easily**] bored. But why should this be [ⓐ **false** / ⓑ **true**]? The answer lies buried deep in our nerve cells, which are designed to [ⓐ **reduce** / ⓑ **increase**] their initial excited response to stimuli each time they occur. At the same time, these neurons [ⓐ **diminish** / ⓑ **enhance**] their responses to things that [ⓐ **change** / ⓑ **stay**] — especially things that change [ⓐ **slowly** / ⓑ **quickly**]. We probably evolved this way because our ancestors got more survival value, for example, from attending to what was [ⓐ **moving** / ⓑ **still**] in a tree than to the tree itself. Boredom in reaction to an unchanging environment [ⓐ **turns down** / ⓑ **turns up**] the level of neural excitation so that new stimuli [ⓐ **stand out** / ⓑ **blend in**] more. It's the neural equivalent of [ⓐ **turning off** / ⓑ **turning on**] a front door light to see the fireflies.

29

Some countries have proposed [ⓐ **easier** / ⓑ **tougher**] guidelines for determining brain death when transplantation — transferring organs to others — is under consideration. In several European countries, there are legal requirements which specify that a whole team of doctors must agree over the diagnosis of death in the case of a potential donor. The reason for these [ⓐ **strict** / ⓑ **permissive**] regulations for diagnosing brain death in potential organ donors is, no doubt, to [ⓐ **increase** / ⓑ **ease**] public fears of a [ⓐ **premature** / ⓑ **delayed**] diagnosis of brain death for the purpose of obtaining organs. But it is [ⓐ **certain** / ⓑ **questionable**] whether these requirements [ⓐ **heighten** / ⓑ **reduce**] public suspicions as much as they create them. They certainly [ⓐ **maintain** / ⓑ **dispel**] mistaken beliefs that diagnosing brain death is an [ⓐ **unreliable** / ⓑ **reliable**] process lacking [ⓐ **precision** / ⓑ **vagueness**]. As a matter of [ⓐ **inconsistency** / ⓑ **consistency**], at least, criteria for diagnosing the deaths of organ donors should be exactly the [ⓐ **different** / ⓑ **same**] as for those for whom immediate burial or cremation is intended.

30

The term minimalism gives a [ⓐ **negative** / ⓑ **positive**] impression to some people who think that it is all about [ⓐ **sacrificing** / ⓑ **keeping**] valuable possessions. This insecurity naturally stems from their [ⓐ **attachment** / ⓑ **detachment**] to their possessions. It is [ⓐ **difficult** / ⓑ **easy**] to distance oneself from something that has been around for quite some time. Being an [ⓐ **detached** / ⓑ **emotional**] animal, human beings give meaning to the things around them. So, the question arising here is that if minimalism will [ⓐ **hurt** / ⓑ **comfort**] one's emotions, why become a minimalist? The answer is very [ⓐ **simple** / ⓑ **complex**]; the assumption of the question is fundamentally [ⓐ **wrong** / ⓑ **correct**]. Minimalism does not [ⓐ **heal** / ⓑ **hurt**] emotions. You might feel a bit [ⓐ **happy** / ⓑ **sad**] while getting rid of a [ⓐ **useless** / ⓑ **useful**] item but sooner than later, this feeling will be overcome by the [ⓐ **sorrow** / ⓑ **joy**] of clarity. Minimalists never argue that you should [ⓐ **take** / ⓑ **leave**] every convenience of the modern era. They are of the view that you only need to [ⓐ **accumulate** / ⓑ **eliminate**] stuff that is unused or not going to be used in the near future.

31

A [ⓐ **ordinary** / ⓑ **remarkable**] characteristic of the visual system is that it has the ability of [ⓐ **rejecting** / ⓑ **adapting**] itself. Psychologist George M. Stratton made this clear in an impressive self-experiment. Stratton wore reversing glasses for several days, which literally turned the world / ⓑ [**down□ upside right side up**] for him. In the beginning, this caused him great [ⓐ **ease** / ⓑ **difficulties**]: just putting food in his mouth with a fork was a [ⓐ **challenge** / ⓑ **breeze**] for him. With time, however, his visual system [ⓐ **adjusted** / ⓑ **resisted**] to the new stimuli from reality, and he was able to act [ⓐ **normally** / ⓑ **abnormally**] in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with [ⓐ **solutions** / ⓑ **problems**]: he used the [ⓐ **right** / ⓑ **wrong**] hand when he wanted to reach for something, for example. Fortunately, Stratton could [ⓐ **reverse** / ⓑ **maintain**] the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to [ⓐ **abnormal** / ⓑ **normal**] after one day.

32

Participants in a study were asked to answer questions like "Why does the moon have phases?" Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a **[ⓐ new / ⓑ same]** set of questions, such as "Why does Swiss cheese have holes?" These questions were **[ⓐ related / ⓑ unrelated]** to the ones asked during the first part of the study, so participants who used the internet had absolutely no **[ⓐ advantage / ⓑ disadvantage]** over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how **[ⓐ poorly / ⓑ well]** they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more **[ⓐ knowledgeable / ⓑ ignorant]** than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to **[ⓐ unrelated / ⓑ related]** information was enough to **[ⓐ pump up / ⓑ reduce]** their intellectual **[ⓐ doubt / ⓑ confidence]**.

33

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears **[ⓐ same / ⓑ different]**. We might also zoom out to the extent where it appears as a single, **[ⓐ uniform / ⓑ varied]** object. We might take the platypus as an **[ⓐ individual / ⓑ group]**, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the **[ⓐ monotonous / ⓑ varied]** behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

34

Plato's realism [ⓐ **abandons** / ⓑ **includes**] all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was [ⓐ **perfect** / ⓑ **imperfect**]. They all possessed [ⓐ **flaws** / ⓑ **perfections**], and all were subject to [ⓐ **remain** / ⓑ **change**] and [ⓐ **decayed** / ⓑ **rejuvenated**] with time. So how can we talk about [ⓐ **flawed** / ⓑ **perfect**] circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats [ⓐ **leave** / ⓑ **chase**] perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but [ⓐ **perfect** / ⓑ **weird**] world beyond our senses.

35

In statistics, the law of large numbers describes a situation where having [ⓐ **more** / ⓑ **less**] data is [ⓐ **worse** / ⓑ **better**] for making predictions. According to it, the [ⓐ **more** / ⓑ **less**] often an experiment is conducted, the [ⓐ **farther** / ⓑ **closer**] the average of the results can be expected to match the [ⓐ **true** / ⓑ **false**] state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's [ⓐ **luck** / ⓑ **misfortune**] after betting on 7. But the [ⓐ **less** / ⓑ **more**] often you repeat this bet, the [ⓐ **farther** / ⓑ **closer**] the relative frequency of wins and losses is expected to approach the [ⓐ **true** / ⓑ **false**] chance of winning, meaning that your luck will at some point [ⓐ **fade away** / ⓑ **intensify**]. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will [ⓐ **cause** / ⓑ **prevent**] accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to [ⓐ **disrupt** / ⓑ **balance**] individual losses.

A1 어휘 선택 1

36

The [ⓐ **adult** / ⓑ **adolescent**] brain is not fully [ⓐ **developed** / ⓑ **incomplete**] until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a [ⓐ **advantage** / ⓑ **disadvantage**]. One of their brain regions that matures [ⓐ **later** / ⓑ **earlier**] is the prefrontal cortex, which is the control center, tasked with thinking [ⓐ **behind** / ⓑ **ahead**] and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial [ⓐ **angry** / ⓑ **happy**] text and modifying it with [ⓐ **kinder** / ⓑ **meaner**] words. On the other hand, the limbic system matures [ⓐ **later** / ⓑ **earlier**], playing a central role in processing emotional responses. Because of its [ⓐ **earlier** / ⓑ **later**] development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and [ⓐ **logical-based** / ⓑ **irrational**] decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make [ⓐ **good** / ⓑ **bad**] decisions.

37

Despite the [ⓐ **ordinary** / ⓑ **remarkable**] progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have [ⓐ **advantages** / ⓑ **limitations**]. These limitations relate to the database used in the learning stage. If the selected database does not contain [ⓐ **insufficient** / ⓑ **enough**] instances, the result may be systematically [ⓐ **unaffected** / ⓑ **affected**]. For example, the performance of a facial biometric system may [ⓐ **decrease** / ⓑ **increase**] if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience [ⓐ **uniformity** / ⓑ **changes**] in the texture of the face, particularly with the appearance of [ⓐ **wrinkles** / ⓑ **smoothness**] and sagging skin. These changes may be [ⓐ **highlighted** / ⓑ **hidden**] by weight gain or loss. To counteract this problem, researchers have developed models for face aging or digital [ⓐ **de-aging** / ⓑ **aging**]. It is used to compensate for the [ⓐ **differences** / ⓑ **similarities**] in facial characteristics, which appear over a given time period.

38

The [ⓐ **decline** / ⓑ **increase**] in the [ⓐ **uniformity** / ⓑ **diversity**] of our food is an entirely human-made process. The biggest [ⓐ **loss** / ⓑ **gain**] of crop diversity came in the decades that followed the Second World War. In an attempt to save millions from extreme [ⓐ **hunger** / ⓑ **fullness**], crop scientists found ways to produce grains such as rice and wheat on an [ⓐ **tiny** / ⓑ **enormous**] scale. And thousands of traditional varieties were replaced by a small number of new [ⓐ **super-productive** / ⓑ **unproductive**] ones. The strategy worked [ⓐ **poorly** / ⓑ **spectacularly**] well, at least to begin with. Because of it, grain production tripled, and between 1970 and 2020 the human population more than [ⓐ **halved** / ⓑ **doubled**]. Leaving the contribution of that strategy to one side, the [ⓐ **safety** / ⓑ **danger**] of creating more uniform crops is that they are more at [ⓐ **safe** / ⓑ **risk**] when it comes to disasters. Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of [ⓐ **not being able** / ⓑ **being able**] to survive diseases, pests and climate extremes.

39

Between 1940 and 2000, Cuba [ⓐ **ruled** / ⓑ **fell behind**] the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms covered in red from head to toe, a strong contrast to the more [ⓐ **radical** / ⓑ **conservative**] North American style featuring grey or white pants. Not only were their athletic talents [ⓐ **superior** / ⓑ **inferior**], the Cubans appeared even [ⓐ **stronger** / ⓑ **weaker**] from just the colour of their uniforms. A game would not even start and the opposing team would already be [ⓐ **scared** / ⓑ **brave**]. A few years ago, Cuba [ⓐ **maintained** / ⓑ **altered**] that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has [ⓐ **rose** / ⓑ **declined**] since that time. The country that [ⓐ **followed** / ⓑ **ruled**] international baseball for decades has not been on [ⓐ **top** / ⓑ **bottom**] since that uniform change. Traditions are [ⓐ **important** / ⓑ **trivial**] for a team; while a team brand or image can [ⓐ **adjust** / ⓑ **resist**] to keep up with present times, if it [ⓐ **embraces** / ⓑ **abandons**] or [ⓐ **neglects** / ⓑ **cares for**] its roots, [ⓐ **positive** / ⓑ **negative**] effects can surface.

A1 어휘 선택 1

40

Many of the first models of cultural evolution drew [ⓐ **noticeable** / ⓑ **invisible**] connections between culture and genes by using concepts from theoretical population genetics and applying them to culture. Cultural patterns of transmission, innovation, and [ⓐ **selection** / ⓑ **rejection**] are conceptually likened to genetic processes of transmission, mutation, and selection. However, these approaches had to be [ⓐ **modified** / ⓑ **maintained**] to account for the [ⓐ **similarities** / ⓑ **differences**] between genetic and cultural transmission. For example, we do not expect the cultural transmission to follow the [ⓐ **rules** / ⓑ **chaos**] of genetic transmission [ⓐ **strictly** / ⓑ **loosely**]. If two biological parents have [ⓐ **different** / ⓑ **same**] forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is [ⓐ **irrelevant** / ⓑ **relevant**] beyond just the probability that an individual's parents had that trait.

41~42

A ball thrown into the air is acted upon by the initial force given it, [ⓐ **persisting** / ⓑ **stopping**] as inertia of movement and tending to carry it in the same straight line, and by the constant [ⓐ **pull** / ⓑ **push**] of gravity downward, as well as by the [ⓐ **assistance** / ⓑ **resistance**] of the air. It moves, accordingly, in a [ⓐ **curved** / ⓑ **straight**] path. Now the path does not represent the working of any particular force; there is simply the combination of the three [ⓐ **advanced** / ⓑ **elementary**] forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their [ⓐ **joint** / ⓑ **separate**] action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual [ⓐ **separately** / ⓑ **together**]. The significance of group behavior is [ⓐ **greatly** / ⓑ **slightly**] increased in the case of human beings by the fact that some of the tendencies to action of the individual are related [ⓐ **vaguely** / ⓑ **definitely**] to other persons, and could not be aroused except by other persons acting as [ⓐ **deterrents** / ⓑ **stimuli**]. An individual in [ⓐ **partial** / ⓑ **complete**] isolation would not reveal their [ⓐ **cooperative** / ⓑ **competitive**] tendencies, their tendencies towards the [ⓐ **opposite** / ⓑ **same**] sex, their [ⓐ **neglectful** / ⓑ **protective**] tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

A1 어휘 선택 2

20

Unfortunately, many people don't take **[ⓐ shared / ⓑ individual]** responsibility for their own **[ⓐ decline / ⓑ development]**. Instead, they simply **[ⓐ walk / ⓑ race]** the race laid out for them. They do **[ⓐ poorly / ⓑ fine]** enough in school to keep advancing. Maybe they manage to get a **[ⓐ terrible / ⓑ great]** job at a well-run company. But so many think and act as if their **[ⓐ study / ⓑ ignorance]** trip ends with college. They have checked all the boxes in the life that was laid out for them and now **[ⓐ miss / ⓑ have]** a road map describing the right ways to move forward and continue to **[ⓐ improve / ⓑ worsen]**. In truth, that's when the **[ⓐ trip / ⓑ stay]** really begins. When school is finished, your growth becomes **[ⓐ mandatory / ⓑ optional]**. Like healthy eating habits or a regular exercise program, you need to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen — and your life and career are likely to stop **[ⓐ moving / ⓑ halting]** as a result.

21

Many people take the [ⓐ usual / ⓑ unusual] view that color is an [ⓐ actual / ⓑ fake] property of things, or of the light that [ⓐ sticks / ⓑ jumps] off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as [ⓐ false / ⓑ true] as the leaves. Others argue that color doesn't [ⓐ die / ⓑ live] in the physical world at all but exists only in the [ⓐ sight / ⓑ blindness] or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be colorless — and so would everything else. They say there is no such thing as color; there are only the people who [ⓐ ignore / ⓑ notice] it. Both positions are, in a way, [ⓐ wrong / ⓑ right]. Color is [ⓐ fake / ⓑ real] and [ⓐ public / ⓑ personal] — "the place," as Paul Cézanne put it, "where our brain and the universe meet." Color is created when light from the world is registered by the eyes and interpreted by the brain.

22

When writing a novel, research for information needs to be done. The thing is that some kinds of fiction demand a **[ⓐ lesser / ⓑ greater]** level of detail: crime fiction, for example, or scientific thrillers. The information is never **[ⓐ easy / ⓑ tough]** to find; one website for authors even organizes trips to police stations, so that crime writers can get it right. Often, a **[ⓐ rude / ⓑ courteous]** letter will earn you permission to visit a particular location and **[ⓐ note / ⓑ ignore]** all the details that you need. But remember that you will **[ⓐ push / ⓑ pull]** your readers to **[ⓐ dullness / ⓑ excitement]** if you think that you need to pack everything you discover into your work. The details that **[ⓐ count / ⓑ dismiss]** are those that reveal the human experience. The **[ⓐ unimportant / ⓑ vital]** thing is telling a story, finding the characters, the tension, and the conflict — not the train timetable or the building blueprint.

23

Nearly everything has to go through your **[ⓐ closure / ⓑ opening]** to get to the rest of you, from food and air to bacteria and viruses. A **[ⓐ sick / ⓑ well]** opening can help your body get what it needs and **[ⓐ allow / ⓑ stop]** it from harm — with adequate space for air to travel to your lungs, and **[ⓐ strong / ⓑ weak]** teeth and gums that **[ⓐ welcome / ⓑ block]** harmful microorganisms from entering your bloodstream. From the moment you are created, oral health **[ⓐ ignores / ⓑ impacts]** every aspect of your life. What happens in the opening is usually just the **[ⓐ start / ⓑ end]** of the iceberg and a **[ⓐ mirror / ⓑ distortion]** of what is happening in other parts of the body. **[ⓐ Good / ⓑ Bad]** oral health can be a cause of a disease that affects the entire body. The microorganisms in an unhealthy opening can enter the bloodstream and travel anywhere in the body, posing serious health risks.

24

Kids [ⓐ **get excited** / ⓑ **grow weary**] of their toys, college students [ⓐ **dislike** / ⓑ **enjoy**] cafeteria food, and sooner or later most of us [ⓐ **lose interest** / ⓑ **become fascinated**] in our favorite TV shows. The bottom line is that we humans are easily [ⓐ **weary** / ⓑ **interested**]. But why should this be true? The answer lies buried deep in our nerve cells, which are designed to reduce their initial [ⓐ **thrilled** / ⓑ **bored**] response to stimuli each time they occur. At the same time, these neurons enhance their responses to things that [ⓐ **alter** / ⓑ **remain**] — especially things that change quickly. We probably evolved this way because our ancestors got more survival value, for example, from attending to what was moving in a tree than to the tree itself. [ⓐ **Weariness** / ⓑ **Excitement**] in reaction to an unchanging environment turns down the level of neural excitation so that new stimuli stand out more. It's the neural equivalent of turning off a front door light to see the fireflies.

29

Some countries have proposed [ⓐ **harder** / ⓑ **easier**] guidelines for determining brain death when transplantation — transferring organs to others — is under consideration. In several European countries, there are legal requirements which specify that a whole team of doctors must [ⓐ **consent** / ⓑ **disagree**] over the diagnosis of death in the case of a potential donor. The reason for these [ⓐ **lenient** / ⓑ **severe**] regulations for diagnosing brain death in potential organ donors is, no doubt, to [ⓐ **calm** / ⓑ **alarm**] public fears of a premature diagnosis of brain death for the purpose of obtaining organs. But it is questionable whether these requirements [ⓐ **lessen** / ⓑ **increase**] public suspicions as much as they create them. They certainly maintain mistaken beliefs that diagnosing brain death is an [ⓐ **uncertain** / ⓑ **certain**] process lacking [ⓐ **accuracy** / ⓑ **inaccuracy**]. As a matter of consistency, at least, criteria for diagnosing the deaths of organ donors should be exactly the same as for those for whom immediate burial or cremation is intended.

A1 어휘 선택 2

30

The term minimalism gives a [ⓐ **good** / ⓑ **bad**] impression to some people who think that it is all about [ⓐ **giving up** / ⓑ **keeping**] valuable possessions. This [ⓐ **bravery** / ⓑ **fear**] naturally stems from their [ⓐ **bond** / ⓑ **disconnection**] to their possessions. It is [ⓐ **hard** / ⓑ **easy**] to distance oneself from something that has been around for quite some time. Being an [ⓐ **feeling** / ⓑ **unfeeling**] animal, human beings give meaning to the things around them. So, the question arising here is that if minimalism will hurt one's emotions, why become a minimalist? The answer is very [ⓐ **easy** / ⓑ **hard**]; the assumption of the question is fundamentally wrong. Minimalism does not hurt emotions. You might feel a bit [ⓐ **unhappy** / ⓑ **happy**] while getting rid of a useless item but sooner than later, this feeling will be overcome by the joy of clarity. Minimalists never argue that you should leave every convenience of the modern era. They are of the view that you only need to [ⓐ **remove** / ⓑ **add**] stuff that is unused or not going to be used in the near future.

31

A [ⓐ **notable** / ⓑ **unnoticed**] characteristic of the visual system is that it has the ability of [ⓐ **adjusting** / ⓑ **fixing**] itself. Psychologist George M. Stratton made this clear in an [ⓐ **ordinary** / ⓑ **astonishing**] self-experiment. Stratton wore reversing glasses for several days, which literally turned the world upside down for him. In the beginning, this caused him [ⓐ **significant** / ⓑ **minor**] difficulties: just putting food in his mouth with a fork was a [ⓐ **test** / ⓑ **solution**] for him. With time, however, his visual system adjusted to the new stimuli from reality, and he was able to [ⓐ **halt** / ⓑ **perform**] normally in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with [ⓐ **solutions** / ⓑ **issues**]: he used the wrong hand when he wanted to reach for something, for example. Fortunately, Stratton could [ⓐ **maintain** / ⓑ **invert**] the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to normal after one day.

32

Participants in a study were asked to answer questions like "Why does the moon have phases?" Half the **[ⓐ members / ⓑ outsiders]** were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no **[ⓐ drawback / ⓑ benefit]** over those who hadn't. You would think that both sets of participants would be equally **[ⓐ doubtful / ⓑ confident]** or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more **[ⓐ smart / ⓑ dumb]** than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to **[ⓐ decrease / ⓑ boost]** their intellectual confidence.

33

Anthropologist Gregory Bateson suggests that we tend to **[ⓐ know / ⓑ misunderstand]** the world by focusing in on **[ⓐ general / ⓑ specific]** features within it. Take platypuses. We might **[ⓐ examine / ⓑ ignore]** in so closely to their fur that each hair appears different. We might also **[ⓐ advance / ⓑ pull back]** to the extent where it appears as a single, **[ⓐ alike / ⓑ different]** object. We might take the platypus as an **[ⓐ alone / ⓑ together]**, or we might treat it as part of a larger **[ⓐ group / ⓑ individual]** such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to examine in on individual pieces of hair or pull back to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves **[ⓐ highlighting / ⓑ hiding]** certain aspects and **[ⓐ overlooking / ⓑ noticing]** others.

A1 어휘 선택 2

34

Plato's [ⓐ **idealism** / ⓑ **pragmatism**] includes all aspects of experience but is most easily [ⓐ **obscured** / ⓑ **elucidated**] by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might [ⓐ **disregard** / ⓑ **designate**] a particular example [ⓐ **erased** / ⓑ **etched**] into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was [ⓐ **defective** / ⓑ **flawless**]. They all possessed [ⓐ **imperfections** / ⓑ **virtues**], and all were subject to [ⓐ **transformation** / ⓑ **stasis**] and [ⓐ **deteriorated** / ⓑ **flourished**] with time. So how can we talk about perfect circles if we cannot actually [ⓐ **observe** / ⓑ **overlook**] or touch them? Plato's [ⓐ **mundane** / ⓑ **remarkable**] answer was that the world we see is a [ⓐ **opulent** / ⓑ **meager**] reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato [ⓐ **doubted** / ⓑ **maintained**] that the Forms or universals are the true reality that [ⓐ **vanishes** / ⓑ **subsists**] in an invisible but perfect world beyond our senses.

35

In statistics, the law of large numbers describes a situation where having more [ⓐ **info** / ⓑ **ignorance**] is [ⓐ **good** / ⓑ **bad**] for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to [ⓐ **differ** / ⓑ **equal**] the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to [ⓐ **leave** / ⓑ **near**] the true chance of winning, meaning that your luck will at some point [ⓐ **vanish** / ⓑ **appear**]. Similarly, car insurers collect large amounts of [ⓐ **facts** / ⓑ **lies**] to figure out the chances that drivers will [ⓐ **make** / ⓑ **prevent**] accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

36

The adolescent brain is not fully [ⓐ **shrunken** / ⓑ **grown**] until its early twenties. This means the way the adolescents' decision-making circuits [ⓐ **mix** / ⓑ **separate**] and process information may put them at a [ⓐ **safe spot** / ⓑ **bad spot**]. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and [ⓐ **checking** / ⓑ **ignoring**] consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to [ⓐ **push** / ⓑ **pull back**] decision-making. Decision-making in the adolescent brain is led by emotional factors more than the [ⓐ **view** / ⓑ **disregard**] of consequences. Due to these differences, there is an [ⓐ **balance** / ⓑ **unevenness**] between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make [ⓐ **right** / ⓑ **wrong**] decisions.

37

Despite the [ⓐ **terrible** / ⓑ **amazing**] progress in deep-learning based facial recognition approaches in [ⓐ **past** / ⓑ **future**] years, in terms of identification performance, they still have [ⓐ **freedoms** / ⓑ **limits**]. These limits relate to the database used in the learning stage. If the selected database does not contain [ⓐ **plenty** / ⓑ **scarce**] instances, the result may be systematically affected. For example, the performance of a facial biometric system may [ⓐ **rise** / ⓑ **drop**] if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience changes in the texture of the face, particularly with the [ⓐ **hiding** / ⓑ **showing**] of wrinkles and sagging skin. These changes may be highlighted by weight [ⓐ **decrease** / ⓑ **increase**] or loss. To [ⓐ **support** / ⓑ **fight**] this problem, researchers have developed models for face aging or digital de-aging. It is used to [ⓐ **balance** / ⓑ **unbalance**] for the differences in facial characteristics, which [ⓐ **show** / ⓑ **hide**] over a given time period.

A1 어휘 선택 2

38

The [ⓐ **increase** / ⓑ **decrease**] in the [ⓐ **variety** / ⓑ **sameness**] of our food is an [ⓐ **natural** / ⓑ **artificial**] process. The biggest [ⓐ **reduction** / ⓑ **gain**] of crop [ⓐ **uniformity** / ⓑ **variety**] came in the decades that followed the Second World War. In an attempt to save millions from [ⓐ **mild** / ⓑ **severe**] hunger, crop scientists found ways to produce grains such as rice and wheat on an [ⓐ **tiny** / ⓑ **huge**] scale. And thousands of traditional varieties were replaced by a small number of new super-productive ones. The strategy worked [ⓐ **wonderfully** / ⓑ **poorly**] well, at least to begin with. Because of it, grain production [ⓐ **decreased** / ⓑ **increased**], and between 1970 and 2020 the human population more than [ⓐ **shrank** / ⓑ **grew**]. Leaving the contribution of that strategy to one side, the danger of creating more [ⓐ **diverse** / ⓑ **alike**] crops is that they are more at risk when it comes to disasters. Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of not being able to survive diseases, pests, and climate extremes.

39

Between 1940 and 2000, Cuba [ⓐ **followed** / ⓑ **controlled**] the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms [ⓐ **empty** / ⓑ **filled**] in red from head to toe, a [ⓐ **timid** / ⓑ **bold**] contrast to the more conservative North American style featuring grey or white pants. Not only were their athletic talents [ⓐ **better** / ⓑ **worse**], the Cubans appeared even [ⓐ **mightier** / ⓑ **weaker**] from just the colour of their uniforms. A game would not even start and the opposing team would already be [ⓐ **frightened** / ⓑ **brave**]. A few years ago, Cuba [ⓐ **kept** / ⓑ **changed**] that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has [ⓐ **dropped** / ⓑ **risen**] since that time. The country that [ⓐ **led** / ⓑ **trailed**] international baseball for decades has not been on top since that uniform change. Traditions are [ⓐ **unimportant** / ⓑ **critical**] for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglects its roots, negative effects can surface.

40

Many of the first models of cultural evolution drew [ⓐ **unclear** / ⓑ **clear**] connections between culture and genes by using concepts from theoretical population genetics and applying them to culture. Cultural patterns of [ⓐ **gathering** / ⓑ **spreading**], [ⓐ **creation** / ⓑ **destruction**], and [ⓐ **choosing** / ⓑ **ignoring**] are conceptually likened to genetic processes of spreading, change, and choosing. However, these approaches had to be [ⓐ **changed** / ⓑ **kept**] to account for the [ⓐ **variances** / ⓑ **similarities**] between genetic and cultural spreading. For example, we do not expect the cultural spreading to follow the rules of genetic spreading [ⓐ **loosely** / ⓑ **exactly**]. If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait.

41~42

A ball thrown into the air is acted upon by the initial force given it, persisting as inertia of movement and tending to carry it in the [ⓐ **different** / ⓑ **identical**] straight line, and by the constant pull of gravity [ⓐ **below** / ⓑ **above**], as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the [ⓐ **together** / ⓑ **lone**] action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be [ⓐ **shown** / ⓑ **hidden**] if we confined our attention to each individual [ⓐ **alone** / ⓑ **together**]. The significance of group behavior is [ⓐ **heightened** / ⓑ **reduced**] in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be [ⓐ **calmed** / ⓑ **triggered**] except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the [ⓐ **same** / ⓑ **contrasting**] sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

A2 본문 O/X

20

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they simply run the race laid out for them. They do well enough in school to keep advancing. Maybe they manage to get a good job at a well-run company. But so many think and act as if their learning journey ends with college. They have checked all the boxes in the life that was laid out for them and now lack a road map describing the right ways to move forward and continue to grow. In truth, that's when the journey really begins. When school is finished, your growth becomes voluntary. Like healthy eating habits or a regular exercise program, you need to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen — and your life and career are likely to stop progressing as a result.

01 | 윗글의 내용과 일치하지 않는 것은?

① Many individuals neglect their personal developmental goals.
② People often consider their learning journey to end post-college.
③ After finishing school, personal growth is no longer necessary.
④ There's a common tendency to simply follow a preset life path.
⑤ Ensuring continual growth requires commitment and significant resources.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Many individuals believe their education concludes after college. O | X

02 People generally create their own paths for personal growth after college. O | X

03 A well-run company will ensure an employee's continuous personal development. O | X

04 Personal growth after school requires a voluntary commitment. O | X

05 Without personal growth, life and career progression is guaranteed. O | X

21

Many people take the commonsense view that color is an objective property of things, or of the light that bounces off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as real as the leaves. Others argue that color doesn't inhabit the physical world at all but exists only in the eye or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be colorless — and so would everything else. They say there is no such thing as color; there are only the people who see it. Both positions are, in a way, correct. Color is objective and subjective — "the place," as Paul Cézanne put it, "where our brain and the universe meet." Color is created when light from the world is registered by the eyes and interpreted by the brain.

01 | 윗글의 내용과 일치하지 않는 것은?

① The commonsense viewpoint perceives color as an objective property.
② The existence of color is solely in the eye or mind of the viewer.
③ Color is exclusively created when the world's light is interpreted by the brain.
④ Paul Cezanne described color as the meeting place of our brain and universe.
⑤ Color only exists if there are people to see it.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Color is perceived as an objective property by everyone. O | X

02 According to the commonsense view, leaves are green due to the green light they reflect. O | X

03 Some believe that without observers, colors would still exist in the world. O | X

04 Paul Cézanne described color as solely a product of the brain. O | X

05 Light interpretation by the brain is unnecessary for color creation. O | X

A2 본문 O/X

22

When writing a novel, research for information needs to be done. The thing is that some kinds of fiction demand a higher level of detail: crime fiction, for example, or scientific thrillers. The information is never hard to find; one website for authors even organizes trips to police stations, so that crime writers can get it right. Often, a polite letter will earn you permission to visit a particular location and record all the details that you need. But remember that you will drive your readers to boredom if you think that you need to pack everything you discover into your work. The details that matter are those that reveal the human experience. The crucial thing is telling a story, finding the characters, the tension, and the conflict — not the train timetable or the building blueprint.

01 | 윗글의 내용과 일치하지 않는 것은?

① Some fiction types require extensive detail gathering
② A polite letter might help gain access to certain locations
③ Recording every single detail is essential in novel writing
④ Human experiences are the most significant details in a novel
⑤ It's more about the storytelling than the minute details

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Research is required for all genres of fiction writing. O | X

02 Crime fiction writers may have to visit police stations for their research. O | X

03 It's difficult for authors to find information for their novels. O | X

04 Including too many details in a novel can bore readers. O | X

05 The most important aspect of a novel is its accurate train timetables. O | X

23

Nearly everything has to go through your mouth to get to the rest of you, from food and air to bacteria and viruses. A healthy mouth can help your body get what it needs and prevent it from harm — with adequate space for air to travel to your lungs, and healthy teeth and gums that prevent harmful microorganisms from entering your bloodstream. From the moment you are created, oral health affects every aspect of your life. What happens in the mouth is usually just the tip of the iceberg and a reflection of what is happening in other parts of the body. Poor oral health can be a cause of a disease that affects the entire body. The microorganisms in an unhealthy mouth can enter the bloodstream and travel anywhere in the body, posing serious health risks.

01 | 윗글의 내용과 일치하지 않는 것은?

① Healthy teeth and gums prevent harmful elements from entering your body.
② Microorganisms from an unhealthy mouth can travel all over the body.
③ Oral health is crucial from the moment of a person's creation.
④ Poor oral health only affects the mouth, nowhere else in the body.
⑤ Whatever happens in the mouth is a reflection of the body's condition.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Only food and air pass through the mouth to the rest of the body. O | X

02 A healthy mouth can block harmful microorganisms from entering the bloodstream. O | X

03 Oral health starts to impact life from adolescence. O | X

04 Issues in the mouth can indicate problems in other body parts. O | X

05 Microorganisms from the mouth cannot travel to other parts of the body. O | X

A2 본문 O/X

24

Kids tire of their toys, college students get sick of cafeteria food, and sooner or later most of us lose interest in our favorite TV shows. The bottom line is that we humans are easily bored. But why should this be true? The answer lies buried deep in our nerve cells, which are designed to reduce their initial excited response to stimuli each time they occur. At the same time, these neurons enhance their responses to things that change — especially things that change quickly. We probably evolved this way because our ancestors got more survival value, for example, from attending to what was moving in a tree (such as a puma) than to the tree itself. Boredom in reaction to an unchanging environment turns down the level of neural excitation so that new stimuli (like our ancestor's hypothetical puma threat) stand out more. It's the neural equivalent of turning off a front door light to see the fireflies.

01 | 윗글의 내용과 일치하지 않는 것은?

① Humans easily lose interest in repetitive activities.
② Boredom allows new stimuli to stand out more.
③ Our ancestors benefited from focusing on change.
④ Pumas are our ancestors' main threat.
⑤ Neurons diminish initial reactions to repeated stimuli.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Humans become bored because of changes in our environment. O | X

02 Neurons in our brain increase their response every time they encounter the same stimulus. O | X

03 Our ancestors benefited more from noticing stationary objects than moving ones. O | X

04 Boredom helps us to notice new stimuli more easily. O | X

05 The analogy of turning off a front door light relates to increasing neural excitement. O | X

29

Some countries have proposed tougher guidelines for determining brain death when transplantation — transferring organs to others — is under consideration. In several European countries, there are legal requirements which specify that a whole team of doctors must agree over the diagnosis of death in the case of a potential donor. The reason for these strict regulations for diagnosing brain death in potential organ donors is, no doubt, to ease public fears of a premature diagnosis of brain death for the purpose of obtaining organs. But it is questionable whether these requirements reduce public suspicions as much as they create them. They certainly maintain mistaken beliefs that diagnosing brain death is an unreliable process lacking precision. As a matter of consistency, at least, criteria for diagnosing the deaths of organ donors should be exactly the same as for those for whom immediate burial or cremation is intended.

01 | 윗글의 내용과 일치하지 않는 것은?

① Some nations suggest stricter rules for confirming brain death.
② A team of physicians must agree to diagnose death in potential organ donors in certain European countries.
③ Public fear of premature diagnosis of brain death is the sole reason for stricter regulations in organ donation.
④ It is uncertain whether these strict measures lessen or increase public doubts.
⑤ Criteria for diagnosing organ donors' death should match the diagnosis criteria for those intended for immediate funeral.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 A group of doctors must agree on brain death before organ transplantation. O | X

02 All European countries have implemented strict legal requirements for diagnosing death. O | X

03 The strict regulations are designed to prevent people from worrying about organ donation. O | X

04 The public's doubts about brain death diagnoses have decreased due to tougher guidelines. O | X

05 The criteria for diagnosing death should differ between organ donors and non-donors. O | X

A2 본문 O/X

30

The term minimalism gives a negative impression to some people who think that it is all about sacrificing valuable possessions. This insecurity naturally stems from their attachment to their possessions. It is difficult to distance oneself from something that has been around for quite some time. Being an emotional animal, human beings give meaning to the things around them. So, the question arising here is that if minimalism will hurt one's emotions, why become a minimalist? The answer is very simple; the assumption of the question is fundamentally wrong. Minimalism does not hurt emotions. You might feel a bit sad while getting rid of a useless item but sooner than later, this feeling will be overcome by the joy of clarity. Minimalists never argue that you should leave every convenience of the modern era. They are of the view that you only need to eliminate stuff that is unused or not going to be used in the near future.

01 | 윗글의 내용과 일치하지 않는 것은?

① Minimalism is about giving up everything modern.
② Minimalism can cause momentary sadness.
③ Minimalists value unused items.
④ Minimalism does not hurt emotions.
⑤ Attachment to possessions can breed insecurity.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Minimalism is about getting rid of all possessions, regardless of their value. O | X

02 People's attachment to their belongings can make minimalism seem unappealing. O | X

03 Human beings do not attach emotional significance to objects. O | X

04 The practice of minimalism is intended to harm one's emotions. O | X

05 Minimalists believe you should get rid of modern conveniences. O | X

31

A remarkable characteristic of the visual system is that it has the ability of adapting itself. Psychologist George M. Stratton made this clear in an impressive self-experiment. Stratton wore reversing glasses for several days, which literally turned the world upside down for him. In the beginning, this caused him great difficulties: just putting food in his mouth with a fork was a challenge for him. With time, however, his visual system adjusted to the new stimuli from reality, and he was able to act normally in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with problems: he used the wrong hand when he wanted to reach for something, for example. Fortunately, Stratton could reverse the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to normal after one day.

01 | 윗글의 내용과 일치하지 않는 것은?

① George M. Stratton was a notable psychologist who conducted self-experiments.
② Stratton's glasses flipped his view of the world upside down.
③ Stratton's vision adjusted to the reversed stimuli after some time.
④ When he removed his glasses, Stratton had to endure permanent problems.
⑤ With time, Stratton was able to go back to normal life without his reversing glasses.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 George M. Stratton was a psychologist who studied the visual system. O | X

02 Stratton's experiment with reversing glasses lasted only a few hours. O | X

03 Stratton had no issues eating with a fork while wearing the glasses. O | X

04 Stratton was able to see his environment normally by focusing, even with the glasses on. O | X

05 After removing the glasses, Stratton permanently struggled with reaching for objects. O | X

A2 본문 O/X

32

Participants in a study were asked to answer questions like "Why does the moon have phases?" Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

01 | 윗글의 내용과 일치하지 않는 것은?

① Half of the participants were told to search for answers online.
② Participants who used the internet rated themselves more knowledgeable.
③ The study's second part asked questions related to the first part.
④ The study aimed to investigate the impact of internet on confidence.
⑤ The participants who used internet had no advantage in the second part.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 All participants were allowed to use the internet for the first set of questions. O | X

02 The second set of questions was related to the moon's phases. O | X

03 Participants who used the internet felt less confident in their knowledge. O | X

04 The study concluded that access to the internet can inflate self-perceived knowledge. O | X

05 Participants were more knowledgeable about Swiss cheese holes after the study. O | X

33

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | 윗글의 내용과 일치하지 않는 것은?

① Bateson says focusing on features helps understanding the world.
② The platypus can be observed as an individual or species.
③ We need extra tools to view aspects of the platypus.
④ Multiple perspectives can be simultaneously adopted.
⑤ Emphasizing certain features means ignoring others.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Gregory Bateson believes we understand the world by ignoring all its features. O | X

02 According to Bateson, it's impossible to focus on both individual hairs and entire ecosystems simultaneously. O | X

03 Bateson suggests that we can only view the platypus as an individual, not as part of a species. O | X

04 We might need extra tools to examine a platypus's hair closely or its role in an ecosystem. O | X

05 Bateson implies that focusing on certain aspects means we fully understand an object. O | X

A2 본문 O/X

34

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

01 | 윗글의 내용과 일치하지 <u>않는</u> 것은?

① Plato's realism involves every aspect of experience.
② Plato questioned the nature of circles.
③ The physical circles Plato observed were flawed and decayed over time.
④ Perfect circles exist in the observable reality around us.
⑤ Plato's belief was that Forms or universals comprise the unseen perfect reality.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Plato's realism is only applicable to mathematical objects. O | X

02 According to Plato, physical circles can be perfect. O | X

03 Plato believed in an unseen reality where perfect forms exist. O | X

04 Physical objects are subject to change and decay, according to Plato. O | X

05 Plato thought that the world we see is the true reality. O | X

35

In statistics, the law of large numbers describes a situation where having more data is better for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

01 | 윗글의 내용과 일치하지 않는 것은?

① More data helps in making more accurate predictions.
② Repeating an experiment increases the probability of a win.
③ Roulette results tend to align with the actual chances of winning over time.
④ Car insurers use a large pool of data for assessment.
⑤ Casino and insurance industries depend on the law of large numbers.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 The law of large numbers suggests that limited data is adequate for making predictions. O | X

02 Repeated experiments will generally bring the average results closer to reality. O | X

03 Beginner's luck in roulette is an example of the law of large numbers in action. O | X

04 Car insurers use the law of large numbers to predict accidents based on limited criteria. O | X

05 The law of large numbers helps industries manage the balance between wins and losses. O | X

A2 본문 O/X

36

The adolescent brain is not fully developed until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make bad decisions.

01 | 윗글의 내용과 일치하지 않는 것은?

① The prefrontal cortex matures later in adolescence.
② The limbic system plays a minimal role in emotional responses.
③ Bad teenage decisions may be a result of an immature brain.
④ The prefrontal cortex is responsible for modifying initially angry texts.
⑤ The limbic system's early development influences decision-making.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 The prefrontal cortex matures before the limbic system in adolescents. O | X

02 The limbic system has a significant role in processing emotions. O | X

03 Teenagers often rely on logical thinking over emotional responses when making decisions. O | X

04 The prefrontal cortex helps modify impulsive reactions. O | X

05 Adolescent decision-making is not impacted by the maturity of the brain. O | X

Despite the remarkable progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have limitations. These limitations relate to the database used in the learning stage. If the selected database does not contain enough instances, the result may be systematically affected. For example, the performance of a facial biometric system may decrease if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience changes in the texture of the face, particularly with the appearance of wrinkles and sagging skin. These changes may be highlighted by weight gain or loss. To counteract this problem, researchers have developed models for face aging or digital de-aging. It is used to compensate for the differences in facial characteristics, which appear over a given time period.

01 | 윗글의 내용과 일치하지 않는 것은?

① Facial recognition still has limitations despite major progress.
② The texture of a person's face may change over time.
③ All face biometric systems are immune to weight changes.
④ There are models for digitally aging or de-aging faces.
⑤ The database used during learning greatly affects the result.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Facial recognition technology has no limitations in identification performance. O | X

02 A database with insufficient instances can negatively impact results. O | X

03 Enrollment over 10 years ago has no effect on facial recognition performance. O | X

04 Weight changes do not affect the appearance of the face. O | X

05 Researchers have created models to address changes in facial characteristics over time. O | X

A2 본문 O/X

38

The decline in the diversity of our food is an entirely human-made process. The biggest loss of crop diversity came in the decades that followed the Second World War. In an attempt to save millions from extreme hunger, crop scientists found ways to produce grains such as rice and wheat on an enormous scale. And thousands of traditional varieties were replaced by a small number of new super-productive ones. The strategy worked spectacularly well, at least to begin with. Because of it, grain production tripled, and between 1970 and 2020 the human population more than doubled. Leaving the contribution of that strategy to one side, the danger of creating more uniform crops is that they are more at risk when it comes to disasters. Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of not being able to survive diseases, pests and climate extremes.

01 | 윗글의 내용과 일치하지 않는 것은?

① The diversity of our food diminished due to natural occurrences.
② Post-World War II era experienced the biggest loss of crop diversities.
③ Traditional grain varieties were substituted by much productive ones.
④ Grain production tripled due to enhanced crop strategies.
⑤ Greater uniformity in crops increases their vulnerability to external disasters.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 The loss of crop diversity occurred before the Second World War. O | X

02 Crop scientists aimed to alleviate hunger by increasing grain production. O | X

03 The human population decreased between 1970 and 2020. O | X

04 A more diverse selection of crops is less vulnerable to disasters. O | X

05 The strategy to produce grains in large quantities was initially unsuccessful. O | X

39

Between 1940 and 2000, Cuba ruled the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms covered in red from head to toe, a strong contrast to the more conservative North American style featuring grey or white pants. Not only were their athletic talents superior, the Cubans appeared even stronger from just the colour of their uniforms. A game would not even start and the opposing team would already be scared. A few years ago, Cuba altered that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has declined since that time. The country that ruled international baseball for decades has not been on top since that uniform change. Traditions are important for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglects its roots, negative effects can surface.

01 | 윗글의 내용과 일치하지 않는 것은?

① Cuba won 3 of 5 Olympic Games between 1940 and 2000.
② The Cubans' uniforms were entirely red.
③ The Cuban national team's performance declined after a uniform change.
④ North American baseball uniforms are typically grey or white.
⑤ The international baseball scene was dominated by North America in the last century.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Cuba won every World Cup in baseball between 1940 and 2000. O | X

02 Cuban baseball uniforms were traditionally grey or white. O | X

03 The Cuban national team has been less successful since they changed their uniforms. O | X

04 Cuba's baseball team always wore red uniforms in the Olympics. O | X

05 Changing a team's brand or image can never have negative effects. O | X

A2 본문 O/X

40

Many of the first models of cultural evolution drew noticeable connections between culture and genes by using concepts from theoretical population genetics and applying them to culture. Cultural patterns of transmission, innovation, and selection are conceptually likened to genetic processes of transmission, mutation, and selection. However, these approaches had to be modified to account for the differences between genetic and cultural transmission. For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly. If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait.

01 | 윗글의 내용과 일치하지 않는 것은?

① Cultural evolution models initially drew significant parallels with genetic principles.
② Cultural and genetic transmission are identical in their processes.
③ Cultural transmission rules do not strictly emulate those of genetic transmission.
④ A child can inherit cultural traits beyond its biological parents.
⑤ Cultural traits' pervasiveness in society may influence an individual's acquisition of said traits.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 Cultural evolution models originally ignored genetic concepts. O | X

02 Cultural patterns can be compared to genetic processes. O | X

03 Cultural transmission always follows genetic transmission rules. O | X

04 A child has a 50% chance of inheriting either parent's cultural trait. O | X

05 Nonparental figures can influence a child's cultural traits. O | X

41-42

A ball thrown into the air is acted upon by the initial force given it, persisting as inertia of movement and tending to carry it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual separately. The significance of group behavior is greatly increased in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

01 | 윗글의 내용과 일치하지 <u>않는</u> 것은?

① A ball's movement in the air is affected by three forces.
② The path of a ball represents the working of one particular force.
③ There's a joint action in the total action of three forces.
④ Group behavior reveals individual traits that wouldn't otherwise be seen.
⑤ Human individuals in isolation would reveal their competitive tendencies.

02 | 윗글의 내용과 일치하면 T, 일치하지 않으면 F를 고르시오.

01 A ball thrown into the air is affected only by the force of gravity. O | X

02 The ball’s path in the air is a result of a single force acting upon it. O | X

03 Human behavior can be fully understood by examining individuals separately. O | X

04 An individual’s competitive tendencies can be observed even in complete isolation. O | X

05 The joint action of forces on the ball creates a movement different from their isolated actions. O | X

Many people take the commonsense view that color is an objective property of things, or of the light that bounces off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as real as the leaves. Others argue that color doesn't inhabit the physical world at all but exists only in the eye or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be colorless — and so would everything else. They say there is no such thing as color; there are only the people who see it. Both positions are, in a way, correct. Color is objective and subjective — "the place," as Paul Cezanne put it, "where our brain and the universe meet." Color is created when light from the world is registered by the eyes and interpreted by the brain.

When writing a novel, research for information needs to be done. The thing is that some kinds of fiction demand a higher level of detail: crime fiction, for example, or scientific thrillers. The information is never hard to find; one website for authors even organizes trips to police stations, so that crime writers can get it right. Often, a polite letter will earn you permission to visit a particular location and record all the details that you need. But remember that you will drive your readers to boredom if you think that you need to pack everything you discover into your work. The details that matter are those that reveal the human experience. The crucial thing is telling a story, finding the characters, the tension, and the conflict — not the train timetable or the building blueprint.

주제 Finding key elements in a story beyond details.

How to avoid overloading readers with excessive details.

제목 Finding the Right Balance: Research and creativity in Writing

Kids tire of their toys, college students get sick of cafeteria food, and sooner or later most of us lose interest in our favorite TV shows. The bottom line is that we humans are easily bored. But why should this be true? The answer lies buried deep in our nerve cells, which are designed to reduce their initial excited response to stimuli each time they occur. At the same time, these neurons enhance their responses to things that change — especially things that change quickly. We probably evolved this way because our ancestors got more survival value, for example, from attending to what was moving in a tree (such as a puma) than to the tree itself. Boredom in reaction to an unchanging environment turns down the level of neural excitation so that new stimuli (like our ancestor's hypothetical puma threat) stand out more. It's the neural equivalent of turning off a front door light to see the fireflies.

주제 Our nerve cells' role in our tendency to get bored.

Why humans are designed to crave changing experiences.

Some countries have proposed tougher guidelines for determining brain death when transplantation — transferring organs to others — is under consideration. In several European countries, there are legal requirements which specify that a whole team of doctors must agree over the diagnosis of death in the case of a potential donor. The reason for these strict regulations for diagnosing brain death in potential organ donors is, no doubt, to ease public fears of a premature diagnosis of brain death for the purpose of obtaining organs. But it is questionable whether these requirements reduce public suspicions as much as they create them. They certainly maintain mistaken beliefs that diagnosing brain death is an unreliable process lacking precision. As a matter of consistency, at least, criteria for diagnosing the deaths of organ donors should be exactly the same as for those for whom immediate burial or cremation is intended.

The term minimalism gives a negative impression to some people who think that it is all about sacrificing valuable possessions. This insecurity naturally stems from their attachment to their possessions. It is difficult to distance oneself from something that has been around for quite some time. Being an emotional animal, human beings give meaning to the things around them. So, the question arising here is that if minimalism will hurt one's emotions, why become a minimalist? The answer is very simple; the assumption of the question is fundamentally wrong. Minimalism does not hurt emotions. You might feel a bit sad while getting rid of a useless item but sooner than later, this feeling will be overcome by the joy of clarity. Minimalists never argue that you should leave every convenience of the modern era. They are of the view that you only need to eliminate stuff that is unused or not going to be used in the near future.

주제 The misjudgment of minimalism as painful sacrifice.

Minimalism brings joy after initial sadness.

제목 Overcoming Attachment: The Minimalist Journey

A remarkable characteristic of the visual system is that it has the ability of adapting itself. Psychologist George M. Stratton made this clear in an impressive self-experiment. Stratton wore reversing glasses for several days, which literally turned the world upside down for him. In the beginning, this caused him great difficulties: just putting food in his mouth with a fork was a challenge for him. With time, however, his visual system adjusted to the new stimuli from reality, and he was able to act normally in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with problems: he used the wrong hand when he wanted to reach for something, for example. Fortunately, Stratton could reverse the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to normal after one day.

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

주제 Plato's idea of a deeper, unseen reality of perfect Forms.

In statistics, the law of large numbers describes a situation where having more data is better for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

주제 The role of large numbers in predicting outcomes in statistics.

Predictive accuracy increases with more instances of data according to the law of large numbers.

The adolescent brain is not fully developed until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make bad decisions.

Despite the remarkable progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have limitations. These limitations relate to the database used in the learning stage. If the selected database does not contain enough instances, the result may be systematically affected. For example, the performance of a facial biometric system may decrease if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience changes in the texture of the face, particularly with the appearance of wrinkles and sagging skin. These changes may be highlighted by weight gain or loss. To counteract this problem, researchers have developed models for face aging or digital de-aging. It is used to compensate for the differences in facial characteristics, which appear over a given time period.

The decline in the diversity of our food is an entirely human-made process. The biggest loss of crop diversity came in the decades that followed the Second World War. In an attempt to save millions from extreme hunger, crop scientists found ways to produce grains such as rice and wheat on an enormous scale. And thousands of traditional varieties were replaced by a small number of new super-productive ones. The strategy worked spectacularly well, at least to begin with. Because of it, grain production tripled, and between 1970 and 2020 the human population more than doubled. Leaving the contribution of that strategy to one side, the danger of creating more uniform crops is that they are more at risk when it comes to disasters. Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of not being able to survive diseases, pests and climate extremes.

Between 1940 and 2000, Cuba ruled the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms covered in red from head to toe, a strong contrast to the more conservative North American style featuring grey or white pants. Not only were their athletic talents superior, the Cubans appeared even stronger from just the colour of their uniforms. A game would not even start and the opposing team would already be scared. A few years ago, Cuba altered that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has declined since that time. The country that ruled international baseball for decades has not been on top since that uniform change. Traditions are important for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglects its roots, negative effects can surface.

Many of the first models of cultural evolution drew noticeable connections between culture and genes by using concepts from theoretical population genetics and applying them to culture. Cultural patterns of transmission, innovation, and selection are conceptually likened to genetic processes of transmission, mutation, and selection. However, these approaches had to be modified to account for the differences between genetic and cultural transmission. For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly. If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait. -> Early cultural evolution models used the similarity between culture and genes but had to be revised since cultural transmission allows for more diverse factors than genetic transmission.

주제 Cultural evolution models initially used gene-like concepts but had to be adjusted because cultural transmission incorporates more diverse factors than genetic transmission.

41- 42

A ball thrown into the air is acted upon by the initial force given it, persisting as inertia of movement and tending to carry it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual separately. The significance of group behavior is greatly increased in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they simply run the race laid out for them. They do well enough in school to keep advancing. Maybe they manage to get a good job at a well-run company. But so many think and act as if their learning journey ends with college. They have checked all the boxes in the life that was laid out for them and now lack a road map describing the right ways to move forward and continue to grow. In truth, that's when the journey really begins. When school is finished, your growth becomes voluntary. Like healthy eating habits or a regular exercise program, you need to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen — and your life and career are likely to stop progressing as a result.

01 | According to the passage, why do many people fail to take personal responsibility for their growth?

① They are too busy with their jobs.
② They believe their learning ends after college.
③ They lack the financial resources to continue learning.
④ They are satisfied with their current knowledge.

02 | What metaphor does the passage use to describe the continuation of personal growth after formal education?

① Running a race
② Checking boxes
③ Following a road map
④ Committing to a health regimen

03 | What is likely to happen if one does not commit to personal growth, as suggested by the passage?

① They will become more innovative.
② They will face financial difficulties.
③ Their life and career progression will stall.
④ They will gain a lot of theoretical knowledge.

21

Many people take the commonsense view that color is an objective property of things, or of the light that bounces off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as real as the leaves. Others argue that color doesn't inhabit the physical world at all but exists only in the eye or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be colorless — and so would everything else. They say there is no such thing as color; there are only the people who see it. Both positions are, in a way, correct. Color is objective and subjective — "the place," as Paul Cezanne put it, "where our brain and the universe meet." Color is created when light from the world is registered by the eyes and interpreted by the brain.

01 | What is the commonsense view of color according to the passage?

① Color is a property of the observer's mind.

② Color is an objective property of objects or light.

③ Color does not exist without light.

④ Color is only a scientific concept without real existence.

02 | According to some viewpoints in the passage, what would happen to the color of leaves if no one was there to see them?

① They would change color depending on the light.

② They would still be green as they reflect green light.

③ They would be colorless.

④ They would appear more vibrant.

03 | How does Paul Cezanne describe the concept of color in the passage?

① As a purely subjective experience.

② As an illusion created by the mind.

③ As the place where our brain and the universe meet.

④ As a constant property of physical objects.

22

When writing a novel, research for information needs to be done. The thing is that some kinds of fiction demand a higher level of detail: crime fiction, for example, or scientific thrillers. The information is never hard to find; one website for authors even organizes trips to police stations, so that crime writers can get it right. Often, a polite letter will earn you permission to visit a particular location and record all the details that you need. But remember that you will drive your readers to boredom if you think that you need to pack everything you discover into your work. The details that matter are those that reveal the human experience. The crucial thing is telling a story, finding the characters, the tension, and the conflict — not the train timetable or the building blueprint.

01 | What type of fiction is mentioned as requiring a high level of detail in the passage?

① Romance novels
② Crime fiction
③ Historical biographies
④ Fantasy novels

02 | According to the passage, how can authors of crime fiction acquire accurate details for their novels?

① By imagining crime scenes
② By visiting police stations
③ By watching crime movies
④ By interviewing criminals

03 | What does the passage suggest is more important than including excessive details like train timetables or building blueprints in a story?

① Creating a realistic setting
② Developing the plot and characters
③ Describing the environment in detail
④ Focusing on the scientific aspects

23

Nearly everything has to go through your mouth to get to the rest of you, from food and air to bacteria and viruses. A healthy mouth can help your body get what it needs and prevent it from harm — with adequate space for air to travel to your lungs, and healthy teeth and gums that prevent harmful microorganisms from entering your bloodstream. From the moment you are created, oral health affects every aspect of your life. What happens in the mouth is usually just the tip of the iceberg and a reflection of what is happening in other parts of the body. Poor oral health can be a cause of a disease that affects the entire body. The microorganisms in an unhealthy mouth can enter the bloodstream and travel anywhere in the body, posing serious health risks.

01 | What primarily needs to pass through the mouth to influence the rest of the body?

① Only food and air
② Food, air, bacteria, and viruses
③ Only bacteria and viruses
④ Water and nutrients

02 | How does a healthy mouth contribute to overall bodily health?

① By allowing smooth communication
② By providing adequate space for air and preventing harmful microorganisms from entering the bloodstream
③ By enhancing facial aesthetics
④ By improving the sense of taste only

03 | What can be the consequence of poor oral health according to the passage?

① It can lead to temporary discomfort
② It mainly affects the appearance of teeth
③ It can cause diseases that affect the entire body
④ It can improve immune response

B2 내용 종합

24

Kids tire of their toys, college students get sick of cafeteria food, and sooner or later most of us lose interest in our favorite TV shows. The bottom line is that we humans are easily bored. But why should this be true? The answer lies buried deep in our nerve cells, which are designed to reduce their initial excited response to stimuli each time they occur. At the same time, these neurons enhance their responses to things that change — especially things that change quickly. We probably evolved this way because our ancestors got more survival value, for example, from attending to what was moving in a tree (such as a puma) than to the tree itself. Boredom in reaction to an unchanging environment turns down the level of neural excitation so that new stimuli (like our ancestor's hypothetical puma threat) stand out more. It's the neural equivalent of turning off a front door light to see the fireflies.

01 | What is the main reason humans easily get bored according to the passage?

① They lack engaging activities.
② Their nerve cells reduce response to repetitive stimuli.
③ They are not interested in their surroundings.
④ They prefer rapid changes in environment.

02 | What evolutionary benefit does the passage suggest boredom has?

① It helps humans focus on potential dangers.
② It encourages humans to explore new environments.
③ It enhances the ability to ignore distractions.
④ It increases overall energy levels.

03 | What analogy is used in the passage to explain the neural mechanism of boredom?

① Turning off a light to better see in the dark.
② Reducing the volume of music to hear a conversation.
③ Closing a book to watch a movie.
④ Turning off a front door light to see the fireflies.

29

Some countries have proposed tougher guidelines for determining brain death when transplantation — transferring organs to others — is under consideration. In several European countries, there are legal requirements which specify that a whole team of doctors must agree over the diagnosis of death in the case of a potential donor. The reason for these strict regulations for diagnosing brain death in potential organ donors is, no doubt, to ease public fears of a premature diagnosis of brain death for the purpose of obtaining organs. But it is questionable whether these requirements reduce public suspicions as much as they create them. They certainly maintain mistaken beliefs that diagnosing brain death is an unreliable process lacking precision. As a matter of consistency, at least, criteria for diagnosing the deaths of organ donors should be exactly the same as for those for whom immediate burial or cremation is intended.

01 | What is the primary reason for proposing tougher guidelines for determining brain death in the context of organ transplantation?

① To increase the number of organ donations
② To ensure a more accurate diagnosis
③ To ease public fears of premature diagnosis
④ To simplify the legal process

02 | According to the passage, what is the effect of these strict regulations on public perception?

① They increase trust in the medical system
② They decrease public suspicions
③ They maintain mistaken beliefs about the reliability of diagnosing brain death
④ They clarify the criteria for brain death diagnosis

03 | What does the author suggest about the criteria for diagnosing the deaths of organ donors?

① It should be stricter than for non-donors
② It should be the same as for those intended for immediate burial or cremation
③ It should be determined by a single doctor
④ It should be less stringent to promote organ donation

30

The term minimalism gives a negative impression to some people who think that it is all about sacrificing valuable possessions. This insecurity naturally stems from their attachment to their possessions. It is difficult to distance oneself from something that has been around for quite some time. Being an emotional animal, human beings give meaning to the things around them. So, the question arising here is that if minimalism will hurt one's emotions, why become a minimalist? The answer is very simple; the assumption of the question is fundamentally wrong. Minimalism does not hurt emotions. You might feel a bit sad while getting rid of a useless item but sooner than later, this feeling will be overcome by the joy of clarity. Minimalists never argue that you should leave every convenience of the modern era. They are of the view that you only need to eliminate stuff that is unused or not going to be used in the near future.

01 | What is the common misconception about minimalism according to the passage?

① It is too expensive
② It requires sacrificing valuable possessions
③ It is only for young people
④ It is a complicated lifestyle

02 | Why do people feel insecure about adopting minimalism?

① They do not understand its benefits
② They are attached to their possessions
③ They fear social judgment
④ They think it is a temporary trend

03 | What do minimalists actually believe about possessions?

① You should keep everything you own
② You should discard everything from the modern era
③ You should only keep items that are currently in use or will be used soon
④ You should not own any modern conveniences

31

A remarkable characteristic of the visual system is that it has the ability of adapting itself. Psychologist George M. Stratton made this clear in an impressive self-experiment. Stratton wore reversing glasses for several days, which literally turned the world upside down for him. In the beginning, this caused him great difficulties: just putting food in his mouth with a fork was a challenge for him. With time, however, his visual system adjusted to the new stimuli from reality, and he was able to act normally in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with problems: he used the wrong hand when he wanted to reach for something, for example. Fortunately, Stratton could reverse the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to normal after one day.

01 | What was the main purpose of George M. Stratton's self-experiment with reversing glasses?

① To test the durability of glasses
② To explore the adaptability of the visual system
③ To find a new fashion trend with glasses
④ To challenge his daily routines

02 | What immediate effect did wearing reversing glasses have on Stratton?

① He could see better than before
② He experienced difficulty in performing simple tasks
③ He immediately adapted to the change
④ He found it amusing and entertaining

03 | How long did it take for Stratton's perception to return to normal after he stopped wearing the reversing glasses?

① Immediately
② One day
③ Several days
④ One week

32

Participants in a study were asked to answer questions like "Why does the moon have phases?" Half the participants were told to search for the answers on the internet, while the other half weren't allowed to do so. Then, in the second part of the study, all of the participants were presented with a new set of questions, such as "Why does Swiss cheese have holes?" These questions were unrelated to the ones asked during the first part of the study, so participants who used the internet had absolutely no advantage over those who hadn't. You would think that both sets of participants would be equally sure or unsure about how well they could answer the new questions. But those who used the internet in the first part of the study rated themselves as more knowledgeable than those who hadn't, even about questions they hadn't searched online for. The study suggests that having access to unrelated information was enough to pump up their intellectual confidence.

01 | What was the purpose of asking participants questions like "Why does the moon have phases?" in the study?

① To test their general knowledge
② To compare their answers with expert opinions
③ To see if they would use the internet to find answers
④ To enhance their interest in astronomy

02 | What was the main difference in the conditions set for the two groups of participants during the first part of the study?

① One group was asked easier questions than the other.
② One group could use the internet, while the other could not.
③ One group was given textbooks, while the other was not.
④ One group was tested in a controlled environment, while the other was not.

03 | According to the study, what unexpected outcome was observed among participants who used the internet in the first part?

① They felt less confident in their knowledge.
② They rated themselves as more knowledgeable, even on new questions.
③ They performed better on the second set of questions.
④ They showed no interest in the second set of questions.

33

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

01 | What does Gregory Bateson suggest about our understanding of the world?

① We focus on the entire world equally.
② We understand the world by focusing on particular features.
③ We cannot understand the world without scientific tools.
④ We must focus on the world as a static entity.

02 | In the example of the platypus, what does Bateson illustrate about perspectives?

① That focusing on individual features can make them appear different.
② That a platypus can only be viewed as an individual.
③ That we should only view animals in terms of their species.
④ That it is impossible to change our perspective once it is chosen.

03 | According to Bateson, what is a limitation of our perspective-taking?

① We can take multiple perspectives at the same time.
② We can only take up one perspective at a time.
③ We need additional tools to take any perspective.
④ We are unable to ignore certain aspects when viewing from a perspective.

34

Plato's realism includes all aspects of experience but is most easily explained by considering the nature of mathematical and geometrical objects such as circles. He asked the question, what is a circle? You might indicate a particular example carved into stone or drawn in the sand. However, Plato would point out that, if you looked closely enough, you would see that neither it, nor indeed any physical circle, was perfect. They all possessed flaws, and all were subject to change and decayed with time. So how can we talk about perfect circles if we cannot actually see or touch them? Plato's extraordinary answer was that the world we see is a poor reflection of a deeper unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. Plato believed that the Forms or universals are the true reality that exists in an invisible but perfect world beyond our senses.

01 | What does Plato's question about the nature of a circle illustrate about his philosophical views?

① Circles are fundamental shapes in nature.
② Physical objects are perfect and unchanging.
③ The physical world is a flawed reflection of a deeper reality.
④ Plato was primarily concerned with the aesthetics of shapes.

02 | According to Plato, why are physical circles not considered perfect?

① They are always changing and decaying.
② They are not useful in practical applications.
③ They can be destroyed easily.
④ They are too complex to understand fully.

03 | What are "Forms" or "universals" in Plato's philosophy?

① Imperfect physical objects we encounter in daily life.
② Ideas that exist only in the human mind.
③ Perfect and unchanging realities that exist beyond our sensory perception.
④ Scientific theories about physical objects.

35

In statistics, the law of large numbers describes a situation where having more data is better for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

01 | What does the law of large numbers explain in statistics?

① It explains how to conduct an experiment.
② It explains that more data improves prediction accuracy.
③ It explains the role of luck in gambling.
④ It explains how to win at roulette.

02 | How does the example of roulette illustrate the law of large numbers?

① It shows that betting on 7 always increases winning chances.
② It demonstrates that initial wins may not reflect true odds.
③ It suggests that roulette cannot be predicted by statistics.
④ It proves that casinos do not rely on statistical laws.

03 | Why do car insurers collect large amounts of data according to the passage?

① To determine the exact cost of car repairs.
② To predict the likelihood of drivers causing accidents.
③ To improve their advertising strategies.
④ To increase their profits directly.

36

The adolescent brain is not fully developed until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make bad decisions.

01 | At what age is the adolescent brain fully developed?

① Mid-teens
② Early twenties
③ Late twenties
④ Early thirties

02 | Which part of the adolescent brain matures later and is responsible for evaluating consequences?

① Limbic system
② Prefrontal cortex
③ Cerebellum
④ Hippocampus

03 | Why might adolescents be more likely to make poor decisions according to the passage?

① They rely heavily on logical reasoning
② Their decision-making is more influenced by emotional responses
③ They are not influenced by any brain development
④ Their limbic system is underdeveloped

37

Despite the remarkable progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have limitations. These limitations relate to the database used in the learning stage. If the selected database does not contain enough instances, the result may be systematically affected. For example, the performance of a facial biometric system may decrease if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience changes in the texture of the face, particularly with the appearance of wrinkles and sagging skin. These changes may be highlighted by weight gain or loss. To counteract this problem, researchers have developed models for face aging or digital de-aging. It is used to compensate for the differences in facial characteristics, which appear over a given time period.

01 | What is the main limitation of deep-learning based facial recognition systems mentioned in the passage?

① Lack of skilled programmers
② Insufficient instances in the training database
③ High cost of implementation
④ Inadequate hardware support

02 | How might the performance of a facial biometric system be compromised over time?

① If the person changes their hairstyle
② If the person's facial features change due to aging
③ If the lighting conditions change
④ If the camera quality decreases

03 | What have researchers developed to address the issue of changes in facial characteristics over time?

① New camera technologies
② Models for face aging or digital de-aging
③ Better lighting systems
④ More extensive databases

The decline in the diversity of our food is an entirely human-made process. The biggest loss of crop diversity came in the decades that followed the Second World War. In an attempt to save millions from extreme hunger, crop scientists found ways to produce grains such as rice and wheat on an enormous scale. And thousands of traditional varieties were replaced by a small number of new super-productive ones. The strategy worked spectacularly well, at least to begin with. Because of it, grain production tripled, and between 1970 and 2020 the human population more than doubled. Leaving the contribution of that strategy to one side, the danger of creating more uniform crops is that they are more at risk when it comes to disasters. Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of not being able to survive diseases, pests and climate extremes.

01 | What was the primary cause of the significant loss in crop diversity mentioned in the passage?

① Natural disasters
② Human intervention
③ Climate change
④ Insect infestations

02 | What was the main goal of crop scientists after the Second World War?

① To increase the nutritional value of grains
② To produce grains on a large scale to prevent hunger
③ To make farming easier
④ To reduce the cost of grain production

03 | What is a major risk associated with having a uniform crop system, as highlighted in the passage?

① Increased labor costs
② Higher susceptibility to diseases, pests, and climate extremes
③ Decreased market value
④ Less need for agricultural research

39

Between 1940 and 2000, Cuba ruled the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms covered in red from head to toe, a strong contrast to the more conservative North American style featuring grey or white pants. Not only were their athletic talents superior, the Cubans appeared even stronger from just the colour of their uniforms. A game would not even start and the opposing team would already be scared. A few years ago, Cuba altered that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has declined since that time. The country that ruled international baseball for decades has not been on top since that uniform change. Traditions are important for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglects its roots, negative effects can surface.

01 | During what period did Cuba dominate the world baseball scene?

① Between 1900 and 1950
② Between 1940 and 2000
③ Between 1950 and 2000
④ Between 1980 and 2020

02 | What was a notable feature of the Cuban baseball uniforms compared to North American teams?

① They were less colorful
② They featured grey or white pants
③ They were covered in red from head to toe
④ They included traditional Cuban symbols

03 | What change in the Cuban baseball team coincided with their decline in international performance?

① They started training less
② They changed their uniform style
③ They hired a new coach
④ They stopped participating in international events

40

Many of the first models of cultural evolution drew noticeable connections between culture and genes by using concepts from theoretical population genetics and applying them to culture. Cultural patterns of transmission, innovation, and selection are conceptually likened to genetic processes of transmission, mutation, and selection. However, these approaches had to be modified to account for the differences between genetic and cultural transmission. For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly. If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait. -> Early cultural evolution models used the similarity between culture and genes but had to be revised since cultural transmission allows for more diverse factors than genetic transmission.

01 | What was the primary influence on the early models of cultural evolution?

① Sociological theories
② Psychological theories
③ Genetic theories
④ Economic theories

02 | How are cultural patterns conceptually related to genetic processes in these models?

① They are completely unrelated
② They are considered fundamentally identical
③ They are likened but recognized as different
④ They are only similar in terms of selection

03 | Why did the models of cultural evolution need to be modified?

① Cultural traits are always inherited from biological parents
② Cultural transmission does not strictly follow genetic rules
③ All cultural traits are acquired from nonparental adults
④ Cultural traits are less influential than genetic traits

04 | According to the passage, from whom can a child acquire cultural traits?

① Only from their biological parents
② Only from their peers
③ From parents, nonparental adults, and peers
④ From genetic studies

41- 42

A ball thrown into the air is acted upon by the initial force given it, persisting as inertia of movement and tending to carry it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual separately. The significance of group behavior is greatly increased in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

01 |) What forces act on a ball when it is thrown into the air?

① Gravity and inertia only
② Inertia, gravity, and air resistance
③ Gravity and air resistance only
④ Inertia only

02 | What does the curved path of the ball represent?

① The dominance of gravity over other forces
② The isolated action of each force
③ The joint action of all forces involved
④ The weakness of air resistance

03 | How does the passage compare the interaction of forces on a ball to human behavior?

① It suggests that both are unpredictable
② It states that human behavior is less complex
③ It uses the ball's forces to illustrate the complexity of human interactions
④ It shows that human behavior can be studied in isolation like the forces on a ball

04 | According to the passage, what aspect of human nature becomes apparent only in a group setting?

① Individual strengths
② Competitive tendencies
③ Personal achievements
④ Isolated actions

05 | What is necessary to stimulate certain tendencies in an individual, as per the passage?

① Physical isolation
② Interaction with other persons
③ Self-reflection
④ External environmental factors

In statistics, the law of large numbers describes a situation where having more data is better for making predictions.

(A) Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

(B) But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away.

(C) According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7.

(A) This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage.

(B) Because of its earlier development, it is more likely to influence decision-making.

(C) Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences.

(D) The adolescent brain is not fully developed until its early twenties.

(E) Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex.

(F) One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences.

(G) On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses.

(H) This may explain why some teens are more likely to make bad decisions.

(I) It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words.

(A) To counteract this problem, researchers have developed models for face aging or digital de-aging.

(B) It is used to compensate for the differences in facial characteristics, which appear over a given time period.

(C) These limitations relate to the database used in the learning stage.

(D) Despite the remarkable progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have limitations.

(E) For example, the performance of a facial biometric system may decrease if the person to be identified was enrolled over 10 years ago.

(F) These changes may be highlighted by weight gain or loss.

(G) The factor to consider is that this person may experience changes in the texture of the face, particularly with the appearance of wrinkles and sagging skin.

(H) If the selected database does not contain enough instances, the result may be systematically affected.

(A) The decline in the diversity of our food is an entirely human-made process.

(B) The strategy worked spectacularly well, at least to begin with.

(C) And thousands of traditional varieties were replaced by a small number of new super-productive ones.

(D) Leaving the contribution of that strategy to one side, the danger of creating more uniform crops is that they are more at risk when it comes to disasters.

(E) The biggest loss of crop diversity came in the decades that followed the Second World War.

(F) Specifically, a global food system that depends on just a narrow selection of plants has a greater chance of not being able to survive diseases, pests and climate extremes.

(G) Because of it, grain production tripled, and between 1970 and 2020 the human population more than doubled.

(H) In an attempt to save millions from extreme hunger, crop scientists found ways to produce grains such as rice and wheat on an enormous scale.

(A) Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait.

(B) However, these approaches had to be modified to account for the differences between genetic and cultural transmission.

(C) Cultural patterns of transmission, innovation, and selection are conceptually likened to genetic processes of transmission, mutation, and selection.

(D) Many of the first models of cultural evolution drew noticeable connections between culture and genes by using concepts from theoretical population genetics and applying them to culture.

(E) If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait.

(F) -> Early cultural evolution models used the similarity between culture and genes but had to be revised since cultural transmission allows for more diverse factors than genetic transmission.

(G) For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly.

➡ _____

(②) For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly. (③) If two biological parents have different forms of a cultural trait, their child is not necessarily equally likely to acquire the mother's or father's form of that trait. (④) Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers. (⑤) Thus, the frequency of a cultural trait in the population is relevant beyond just the probability that an individual's parents had that trait.

41~42

(A) It moves, accordingly, in a curved path.

(B) A ball thrown into the air is acted upon by the initial force given it, persisting as inertia of movement and tending to carry it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air.

(C) Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action.

(D) In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual separately.

(E) The significance of group behavior is greatly increased in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli.

(F) This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

(G) An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children.

01. Unfortunately, many people don't t_____ p_____ r_____ for their o_____ g_____.
안타깝게도 많은 사람들이 그들 자신의 성장에 대해 개인적인 책임을 지지 않는다.

02. Instead, they simply r_____ the r_____ l_____ o_____ for them.
대신, 그들은 단지 그들에게 놓인 경주를 한다.

03. They do w_____ e_____ in school to k_____ a_____.
그들은 학교에서 계속 발전할 만큼 제법 잘한다.

04. Maybe they m_____ to g_____ a g_____ j_____ at a well-run company.
아마도 그들은 잘 운영되는 회사에서 좋은 일자리를 얻는 것을 해낸다.

05. But so many t_____ and a_____ as if their l_____ j_____ e_____ with c_____.
하지만 아주 많은 사람들이 마치 그들의 배움의 여정이 대학으로 끝나는 것처럼 생각하고 행동한다.

06. They have c_____ all the boxes in the life that was l_____ o_____ for them and now l_____ a r_____ m_____ d_____ the r_____ w_____ to m_____ f_____ and c_____ to g_____.
그들은 그들에게 놓인 삶의 모든 사항을 체크했고 이제는 앞으로 나아가고 계속 성장할 수 있는 올바른 방법을 설명해 주는 로드 맵이 없다.

07. In truth, that's w_____ the j_____ really b_____.
사실, 그때가 여정이 진정으로 시작되는 때이다.

08. When school is f_____, your g_____ b_____ v_____.
학교 교육이 끝나면, 여러분의 성장은 자발적이게 된다.

09. Like h_____ e_____ h_____ or a r_____ e_____ p_____, you n_____ to c_____ to it and d_____ t_____, t_____, and e_____ to it.
건강한 식습관이나 규칙적인 운동 프로그램처럼 여러분은 그것에 전념하고 그것에 생각, 시간, 그리고 에너지를 쏟을 필요가 있다.

10. Otherwise, it simply w_____ h_____ — and your l_____ and c_____ are l_____ to s_____ p_____ as a result.
그렇지 않으면 그것은 그냥 일어나지 않을 것이고, 결과적으로 여러분의 삶과 경력이 진전을 멈출 가능성이 있다.

21

11. Many people t_____ the c_____ v_____ that c_____ is an o_____ p_____ of things, or of the l_____ that b_____ o_____ them.

많은 사람들이 색은 사물 또는 사물로부터 튕겨 나오는 빛의 객관적인 속성이라는 상식적인 견해를 취한다.

12. They say a t_____ l_____ are g_____ because they r_____ g_____ l_____ — a greenness that is just as real as the leaves.

그들은 나뭇잎이 녹색 빛(정확히 나뭇잎만큼 진짜인 녹색)을 반사하기 때문에 녹색이라고 말한다.

13. Others a_____ that c_____ doesn't i_____ the p_____ w_____ at all but e_____ only in the e_____ or m_____ of the v_____.

다른 사람들은 색이 물리적인 세계에 전혀 존재하지 않고 보는 사람의 눈이나 정신 안에만 존재한다고 주장한다.

14. They m_____ that if a tree f_____ in a f_____ and n_____ o_____ was there to s_____ it, its l_____ would be c_____ — and so would e_____ e_____.

그들은 만약 나무가 숲에서 쓰러지고 그것을 볼 사람이 아무도 거기에 없다면, 그것의 잎은 색이 없을 것이고, 다른 모든 것들도 그럴 것이라고 주장한다.

15. They say there is no such thing as c_____; there are only the people who s_____ it.

그들은 색 같은 '것'은 없고 그것을 보는 사람들만 있다고 말한다.

16. Both p_____ are, in a way, c_____.

두 가지 입장 모두 어떤 면에서는 옳다.

17. Color is o_____ and s_____ — "the place," as Paul Cezanne put it, "w_____ our b_____ and the u_____ m_____."

색은 객관적이고 '동시에' 주관적이며, Paul Cezanne이 말했듯이 '우리의 뇌와 우주가 만나는 곳'이다.

18. C_____ is c_____ when l_____ from the world is r_____ by the e_____ and i_____ by the b_____.

색은 세상으로부터의 빛이 눈에 의해 등록되고 뇌에 의해 해석될 때 만들어진다.

22

19. When w_____ a n_____, r_____ for i_____ n_____ to be d_____.

소설을 쓸 때 정보를 위한 조사가 행해질 필요가 있다.

20. The thing is that some kinds of f_____ d_____ a h_____ l_____ of d_____: crime fiction, for example, or scientific thrillers.

문제는 예를 들어 범죄 소설이나 과학 스릴러와 같은 어떤 종류의 소설은 더 높은 수준의 세부 사항을 요구한다는 것이다.

21. The i_____ is never h_____ to f_____; one w_____ for a_____ even o_____ t_____ to p_____ s_____, so that c_____ w_____ can g_____ it r_____.

정보는 찾기에 결코 어렵지 않다. 작가들을 위한 한 웹사이트는 범죄물 작가들이 정보를 제대로 얻을 수 있도록 심지어 경찰서로의 탐방을 조직하기도 한다.

22. Often, a p_____ l_____ will e_____ you p_____ to v_____ a p_____ l_____ and r_____ all the d_____ that you n_____.

종종 정중한 편지는 여러분에게 특정한 장소를 방문하고 필요한 모든 세부 사항을 기록할 수 있는 허가를 얻어 줄 것이다.

23. But r_____ that you will d_____ your r_____ to b_____ if you t_____ that you n_____ to p_____ e_____ you d_____ into your w_____.

하지만 만약 여러분이 발견한 모든 것을 작품에 담아야 한다고 생각할 경우 여러분은 독자들을 지루하게 만들 것이라는 것을 기억하라.

24. The d_____ that m_____ are those that r_____ the h_____ e_____.

중요한 세부 사항은 인간의 경험을 드러내는 것이다.

25. The c_____ t_____ is t_____ a s_____, f_____ the c_____, the t_____, and the c_____ — not the train timetable or the building blueprint.

중요한 것은 기차 시간표나 건물 청사진이 아니라 인물, 긴장, 그리고 갈등을 찾아가며 이야기를 말하는 것이다.

23

26. Nearly e_____ has to g_____ t_____ your m_____ to g_____ to the r_____ of you, from f_____ and a_____ to b_____ and v_____.

음식과 공기에서부터 박테리아와 바이러스까지 거의 모든 것이 여러분의 나머지 부분에 도달하기 위해 여러분의 입을 거쳐야 한다.

27. A h_____ m_____ can h_____ your body g_____ what it n_____ and p_____ it from h_____ — with a_____ s_____ for a_____ to t_____ to your l_____, and h_____ t_____ and g_____ that p_____ h_____ m_____ from entering your bloodstream.

건강한 입은 공기가 폐로 이동할 수 있는 적당한 공간, 그리고 해로운 미생물이 혈류로 들어가는 것을 막는 건강한 치아와 잇몸으로 여러분의 몸이 필요한 것을 얻고, 피해로부터 몸을 지키도록 도와줄 수 있다.

28. From the moment you are c_____, o_____ h_____ a_____ every a_____ of your l_____.

여러분이 생겨난 순간부터 구강 건강은 여러분의 삶의 모든 측면에 영향을 미친다.

29. What h_____ in the m_____ is usually just the t_____ of the i_____ and a r_____ of w_____ is h_____ in other parts of the b_____.

입안에서 일어나는 일은 대개 빙산의 일각일 뿐이며 신체의 다른 부분에서 일어나고 있는 일의 반영이다.

30. P_____ o_____ h_____ can be a c_____ of a d_____ that a_____ the e_____ b_____.

나쁜 구강 건강은 전체 몸에 영향을 끼치는 질병의 원인일 수 있다.

31. The m_____ in an u_____ m_____ can e_____ the b_____ and t_____ a_____ in the body, p_____ s_____ h_____ r_____.

건강하지 않은 입안의 미생물은 혈류로 들어가고 신체의 어느 곳이든 이동하여 심각한 건강상의 위험을 초래할 수 있다.

C2 빈칸 어휘

24

32. K_____ t_____ of their toys, c_____ s_____ g_____ s_____ o_____ cafeteria food, and sooner or later most of us l_____ i_____ in our favorite TV shows.

아이들은 자기들의 장난감에 지루해하고, 대학생들은 카페테리아 음식에 싫증을 내고, 머지않아 우리 중 대부분은 우리가 가장 좋아하는 TV 쇼에 흥미를 잃는다.

33. The b_____ l_____ is that w_____ h_____ are easily b_____.

요점은 우리 인간이 쉽게 지루해한다는 것이다.

34. But w_____ should this be t_____?

그런데 왜 이것이 사실이어야 할까?

35. The a_____ l_____ b_____ d_____ in our n_____ c_____, which are d_____ to r_____ their i_____ e_____ r_____ to s_____ each time they o_____.

답은 자극이 일어날 때마다 그것에 대한 초기의 흥분된 반응을 약화하도록 설계된 우리의 신경 세포 내에 깊이 숨어 있다.

36. At the same time, these n_____ e_____ their r_____ to things that c_____ — especially things that c_____ quickly.

동시에 이 뉴런들은 변화하는 것들, 특히 빠르게 변화하는 것들에 대한 반응을 강화한다.

37. We probably e_____ this way because our a_____ g_____ m_____ s_____ v_____, for example, from a_____ to w_____ was m_____ in a tree (such as a puma) than to the t_____ i_____.

예를 들면 우리는 아마도 우리의 조상이 나무 그 자체보다 (퓨마처럼) 나무에서 움직이는 것에 주의를 기울이는 것으로부터 더 많은 생존 가치를 얻었기 때문에 이런 방식으로 진화했을 것이다.

38. B_____ in r_____ to an u_____ e_____ t_____ d_____ the level of n_____ e_____ so that n_____ s_____ (like our ancestor's hypothetical puma threat) s_____ o_____ more.

변하지 않는 환경에 대한 반응으로의 지루함은 신경 흥분의 수준을 낮춰 (우리 조상이 가정한 퓨마의 위협과 같은) 새로운 자극이 더 두드러지게 한다.

39. It's the n_____ e_____ of t_____ o_____ a front door light to s_____ the f_____.

이것은 반딧불이를 보기 위해 앞문의 불을 끄는 것의 신경적 대응물이다.

29

40. Some countries have **p**_____ **t**_____ **g**_____ for **d**_____ **b**_____ **d**_____ when **t**_____ — **t**_____ **o**_____ to **o**_____ — is under **c**_____.

일부 국가는 장기 이식, 즉 다른 사람에게 장기를 전달하는 것을 고려 중일 때 뇌사를 결정하는 것에 대한 더 엄격한 지침을 제안했다.

41. In several European countries, there are **l**_____ **r**_____ which **s**_____ that a **w**_____ **t**_____ of doctors must **a**_____ over the **d**_____ of **d**_____ in the case of a **p**_____ **d**_____.

몇몇 유럽 국가에는 잠재적 기증자의 경우 의사 팀 전체가 사망 진단에 동의해야 한다고 명시하는 법적 요건들이 있다.

42. The **r**_____ for these **s**_____ **r**_____ for **d**_____ **b**_____ **d**_____ in **p**_____ **o**_____ **d**_____ is, no doubt, to **e**_____ **p**_____ **f**_____ of a **p**_____ **d**_____ of brain death for the **p**_____ of **o**_____ **o**_____.

잠재적인 장기 기증자의 뇌사 진단에 대한 이러한 엄격한 규정들의 이유는 의심할 바 없이 장기 확보를 위한 너무 이른 뇌사 진단에 대한 대중의 두려움을 완화하기 위한 것이다.

43. But it is **q**_____ whether these **r**_____ **r**_____ **p**_____ **s**_____ as much as they **c**_____ them.

하지만 이러한 요건들이 대중의 의심을 만들어 내는 만큼 그것을 줄여 주는지는 의문이다.

44. They certainly **m**_____ **m**_____ **b**_____ that **d**_____ **b**_____ **d**_____ is an **u**_____ **p**_____ **l**_____ **p**_____.

그것들은 뇌사 진단이 정확성이 결여된 신뢰하기 어려운 과정이라는 잘못된 믿음을 확실히 유지시킨다.

45. As a matter of **c**_____, at least, **c**_____ for **d**_____ the **d**_____ of organ donors should be exactly the same as for those for whom **i**_____ **b**_____ or **c**_____ is **i**_____.

적어도 일관성의 이유로 장기 기증자의 사망 진단 기준은 즉각적인 매장 또는 화장이 예정된 사람들에 대한 그것과 정확히 동일해야 한다.

C2 빈칸 어휘

30

46. The term m_____ gives a n_____ i_____ to some people who think that it is all about s_____ v_____ p_____.

미니멀리즘이라는 용어는 그것을 소중한 소유물을 희생하는 것에 관한 것으로만 생각하는 일부 사람들에게 부정적인 인상을 준다.

47. This i_____ naturally s_____ from their a_____ to their p_____.

이러한 불안은 자신의 소유물에 대한 애착에서 자연스럽게 비롯된다.

48. It is d_____ to d_____ o_____ from something that has been a_____ for quite some time.

꽤 오랫동안 곁에 있어 왔던 것으로부터 자신을 멀리 두는 것은 어렵다.

49. Being an e_____ a_____, human beings g_____ m_____ to the things around them.

감정의 동물이기 때문에, 인간은 그들의 곁에 있는 물건에 의미를 부여한다.

50. So, the q_____ a_____ here is that if m_____ will h_____ one's e_____, w_____ b_____ a m_____?

그래서 여기서 생기는 질문은 미니멀리즘이 사람의 감정을 상하게 한다면 왜 미니멀리스트가 되느냐는 것이다.

51. The answer is very simple; the a_____ of the q_____ is f_____ w_____.

대답은 매우 간단하다. 그 질문의 가정은 근본적으로 틀리다.

52. M_____ does not h_____ e_____.

미니멀리즘은 감정을 상하게 하지 않는다.

53. You might f_____ a bit s_____ while g_____ r_____ o_____ a u_____ i_____ but sooner than later, this f_____ will be o_____ by the j_____ of c_____.

여러분은 쓸모 없는 물건을 치우면서 조금 슬퍼할 수도 있지만 머지않아 이 느낌은 명료함의 기쁨으로 극복될 것이다.

54. M_____ n_____ a_____ that you should l_____ every c_____ of the m_____ e_____.

미니멀리스트는 여러분이 현대의 모든 편의를 버려야 한다고 주장하지 않는다.

55. They are of the v_____ that you only n_____ to e_____ s_____ that is u_____ or not going to be u_____ in the near future.

그들은 여러분이 사용되지 않거나 가까운 미래에 사용되지 않을 물건을 없애기만 하면 된다는 견해를 가지고 있다.

56. A r_____ c_____ of the v_____ s_____ is that it has the a_____ of a_____ i_____.

시각 체계의 두드러진 특징은 스스로 적응하는 능력이 있다는 것이다.

57. P_____ George M. Stratton m_____ this clear in an i_____ s_____.

심리학자 George M. Stratton은 인상적인 자가 실험에서 이것을 분명히 했다.

58. Stratton wore r_____ g_____ for several days, which literally t_____ the world u_____ d_____ for him.

Stratton은 며칠 동안 반전 안경을 착용했는데 그 안경은 말 그대로 그에게 세상을 뒤집어 놓았다.

59. In the beginning, this c_____ him great d_____: just p_____ f_____ in his m_____ with a fork was a c_____ for him.

처음에 이것은 그에게 큰 어려움을 초래하였다. 포크로 음식을 입에 넣는 것조차 그에게는 도전이었다.

60. With time, however, his v_____ s_____ a_____ to the n_____ s_____ from r_____, and he was able to a_____ normally in his e_____ again, even s_____ it u_____ when he c_____.

그러나 시간이 지나면서 그의 시각 체계는 현실의 새로운 자극에 적응했고, 그가 집중했을 때는 심지어 똑바로 보면서, 다시 자신의 환경에서 정상적으로 행동할 수 있었다.

61. As he t_____ o_____ his r_____ g_____, he was again c_____ with problems: he u_____ the w_____ h_____ when he w_____ to r_____ for something, for example.

반전 안경을 벗었을 때 그는 다시 문제에 직면했다. 예를 들어 그가 무언가를 잡기를 원할 때 그는 반대 손을 사용했다.

62. Fortunately, Stratton could r_____ the p_____, and he did not have to w_____ r_____ g_____ for the r_____ of his life.

다행히 Stratton은 지각을 뒤집을 수 있었고 평생 반전 안경을 착용하지 않아도 되었다.

63. For him, everything r_____ to n_____ after one day.

그에게 하루 만에 모든 것이 정상으로 돌아왔다.

C2 빈칸 어휘

32

64. P_____ in a study were a_____ to a_____ q_____ like "W_____ does the m_____ have p_____?"

한 연구의 참가자들이 '달은 왜 상을 가지고 있을까'와 같은 질문들에 답하도록 요청받았다.

65. H_____ the p_____ were t_____ to s_____ for the a_____ on the internet, while the other half weren't a_____ to do so.

참가자의 절반은 인터넷에서 답을 검색하라는 말을 들었고 나머지 절반은 그렇게 하도록 허용되지 않았다.

66. Then, in the second part of the study, all of the p_____ were p_____ with a new set of q_____, such as "W_____ does Swiss cheese have h_____?"

그 다음, 연구의 두 번째 단계에서 모든 참가자는 '스위스 치즈에는 왜 구멍이 있을까'와 같은 일련의 새로운 질문들을 제시받았다.

67. These q_____ were u_____ to the ones a_____ during the f_____ p_____ of the study, so p_____ who u_____ the i_____ had a_____ no a_____ over those who h_____.

이 질문들은 연구의 첫 번째 단계에서 질문받았던 것들과는 관련이 없어서 인터넷을 사용한 참가자들은 그러지 않은 참가자들 보다 이점이 전혀 없었다.

68. You would t_____ that both sets of p_____ would be e_____ s_____ or u_____ about how well they could a_____ the n_____ q_____.

여러분은 두 집단의 참가자들이 새로운 질문들에 얼마나 잘 대답할 수 있을 지에 대해 동일한 정도로 확신하거나 확신하지 못할 것으로 생각할 것이다.

69. But those who u_____ the i_____ in the f_____ part of the study r_____ t_____ as more k_____ than those who h_____, even about q_____ they hadn't s_____ online for.

그러나 연구의 첫 번째 단계에서 인터넷을 사용했던 참가자들은 자신이 온라인에서 검색하지 않았던 질문들에 대해서조차 그러지 않았던 참가자들보다 스스로가 더 많이 알고 있다고 평가했다.

70. The study s_____ that h_____ a_____ to u_____ i_____ was e_____ to p_____ u_____ their i_____ c_____.

이 연구는 관련 없는 정보에 접근하는 것이 그들의 지적 자신감을 부풀리기에 충분했다는 것을 시사한다.

71. Anthropologist Gregory Bateson **s**_____ that we tend to **u**_____ the **w**_____ by **f**_____ in on **p**_____ **f**_____ within it.

인류학자 Gregory Bateson은 우리가 세상 안의 특정한 특징에 초점을 맞춤으로써 세상을 이해하는 경향이 있다고 제안한다.

72. Take platypuses. We might **z**_____ **i**_____ so **c**_____ to their **f**_____ that each **h**_____ **a**_____ **d**_____.

오리너구리를 예로 들어 보자. 우리가 그들의 털을 매우 가까이 확대하면 각 가닥이 다르게 보인다.

73. We might also **z**_____ **o**_____ to the extent where it **a**_____ as a **s**_____, **u**_____ **o**_____.

우리는 또한 그것이 하나의 동일한 개체로 보이는 정도까지 축소할 수도 있다.

74. We might **t**_____ the platypus as an **i**_____, or we might **t**_____ it as part of a **l**_____ **u**_____ such as a **s**_____ or an **e**_____.

우리는 오리너구리를 개체로 취급할 수도 있고 종 또는 생태계와 같이 더 큰 단위의 일부로 취급할 수도 있다.

75. It's possible to **m**_____ between many of these **p**_____, although we may **n**_____ some **a**_____ **t**_____ and **s**_____ to zoom in on **i**_____ **p**_____ of **h**_____ or zoom out to **e**_____ **e**_____.

비록 개별 머리카락을 확대하거나 전체 생태계로 축소하기 위해 몇 가지 추가 도구와 기술이 필요할지도 모르지만, 이러한 많은 관점 사이를 이동하는 것은 가능하다.

76. Crucially, however, we can only **t**_____ up one **p**_____ at a time.

그러나 결정적으로 우리는 한 번에 하나의 관점만 취할 수 있다.

77. We can **p**_____ **a**_____ **t**_____ the **v**_____ **b**_____ of individual animals, **l**_____ at what **u**_____ them into a **s**_____ **s**_____, or **l**_____ at them as **p**_____ of **b**_____ **e**_____ **p**_____.

우리는 개별 동물의 다양한 행동에 주의를 기울일 수 있고, 그들을 단일 종으로 통합하는 것을 살펴볼 수도 있고, 더 큰 생태학적 패턴의 일부로서 그들을 살펴볼 수도 있다.

78. Every possible **p**_____ **i**_____ **e**_____ **c**_____ **a**_____ and **i**_____ others.

가능한 모든 관점은 특정 측면을 강조하고 다른 측면을 외면하는 것을 포함한다.

C2 빈칸 어휘

34

79. Plato's realism **i**_____ all aspects of **e**_____ but is most easily **e**_____ by **c**_____ the nature of **m**_____ and **g**_____ **o**_____ such as **c**_____.

플라톤의 실재론은 경험의 모든 측면을 포함하지만, 원과 같은 수학적이고 기하학적인 대상의 특성을 고려함으로써 가장 쉽게 설명된다.

80. He **a**_____ the **q**_____, **w**_____ is a **c**_____?

그는 '원이란 무엇인가'라는 질문을 했다.

81. You might **i**_____ a particular example **c**_____ into **s**_____ or **d**_____ in the **s**_____.

여러분은 돌에 새겨져 있거나 모래에 그려진 특정한 예를 가리킬 수 있다.

82. However, Plato would **p**_____ **o**_____ that, if you **l**_____ **c**_____ enough, you would **s**_____ that neither it, nor indeed any **p**_____ **c**_____, was **p**_____.

그러나 플라톤은 여러분이 충분히 면밀히 관찰한다면, 여러분이 그 어느 것도, 진정 어떤 물리적인 원도 완벽하지 않다는 것을 알게 될 것이라고 지적할 것이다.

83. They all **p**_____ **f**_____, and all were **s**_____ to **c**_____ and **d**_____ with **t**_____.

그것들 모두는 결함을 가지고 있었고, 모두 변화의 영향을 받고 시간이 지남에 따라 쇠하였다.

84. So how can we **t**_____ about **p**_____ **c**_____ if we cannot actually **s**_____ or **t**_____ them?

그렇다면, 우리가 완벽한 원을 실제로 보거나 만질 수 없다면, 그것에 대해 어떻게 이야기할 수 있을 까?

85. Plato's **e**_____ **a**_____ was that the world we see is a **p**_____ **r**_____ of a **d**_____ **u**_____ reality of **F**_____, or **u**_____, where **p**_____ **c**_____ **c**_____ **p**_____ **m**_____ in **p**_____ **c**_____ around **p**_____ **r**_____.

플라톤의 비범한 대답은 우리가 보는 세상이 완벽한 고양이가 완벽한 암석 주변에서 완벽한 원을 그리며 완벽한 쥐를 쫓는 '형상' 또는 '보편자'라는 더 깊은 보이지 않는 실재의 불충분한 반영물이라는 것이다.

86. Plato believed that the **F**_____ or universals are the true reality that **e**_____ in an invisible but perfect world beyond our senses.

플라톤은 '형상' 또는 '보편자'가 보이지 않지만 우리의 감각을 넘어선 완벽한 세계에 존재하는 진정한 실재라고 믿었다.

35

87. In s_____, the l_____ of l_____ n_____ d_____ a situation where h_____ more d_____ is b_____ for m_____ p_____.

통계학에서 대수의 법칙은 더 많은 데이터를 갖는 것이 예측하는 데 더 좋은 상황을 설명한다.

88. According to it, the more often an e_____ is c_____, the c_____ the a_____ of the results can be e_____ to m_____ the t_____ s_____ of the world.

그것에 따르면 실험이 더 자주 수행될수록 그 결과의 평균이 세상의 실제 상태에 더 맞춰지는 것으로 예상될 수 있다.

89. For instance, on your first e_____ with the game of roulette, you may have b_____ l_____ after betting on 7.

예를 들어 룰렛 게임을 처음 접했을 때 7에 베팅한 후 여러분은 초보자의 운이 있을 수 있다.

90. But the m_____ o_____ you r_____ this bet, the c_____ the r_____ f_____ of w_____ and l_____ is e_____ to a_____ the t_____ c_____ of w_____, meaning that your l_____ will at some point f_____ a_____.

하지만 당신이 이 베팅을 더 자주 반복할수록 승패의 상대적인 빈도가 진짜 승률에 더 가까워질 것으로 예상되는데 이는 당신의 운이 어느 순간 사라진다는 것을 의미한다.

91. Similarly, c_____ i_____ c_____ large amounts of d_____ to f_____ o_____ the c_____ that d_____ will c_____ a_____, d_____ o_____ their a_____, r_____, or c_____ b_____.

마찬가지로 자동차 보험사는 운전자가 그들의 연령, 지역 또는 자동차 브랜드에 따라 사고를 일으킬 확률을 파악하기 위해 많은 양의 데이터를 수집한다.

92. Both c_____ and i_____ i_____ r_____ o_____ the l_____ of l_____ n_____ to b_____ i_____ l_____.

카지노와 보험 산업 모두 개별 손실의 균형을 맞추기 위해 대수의 법칙에 의존한다.

C2 빈칸 어휘

36

93. The a_____ b_____ is not fully d_____ until its early t_____.

청소년기의 뇌는 20대 초반까지는 완전히 발달하지 않는다.

94. This means the way the a_____' d_____ c_____ i_____ and p_____ i_____ may p_____ them at a d_____.

이것은 청소년의 의사 결정 회로가 정보를 통합하고 처리하는 방식이 그들을 불리하게 만들 수 있음을 의미한다.

95. One of their b_____ r_____ that m_____ l_____ is the p_____ c_____, which is the c_____ c_____, t_____ with t_____ a_____ and e_____ c_____.

나중에 성숙하는 뇌 영역 중 하나는 통제 센터인 전전두엽 피질이며, 그것은 미리 생각하고 결과를 평가하는 임무를 맡고 있다.

96. It is the a_____ of the b_____ r_____ for p_____ you from s_____ off an i_____ a_____ t_____ and m_____ it with k_____ w_____.

그것은 당신이 초기의 화가 난 문자를 보내는 것을 막고 그것을 더 친절한 단어로 수정하게 하는 역할을 하는 뇌의 영역이다.

97. On the other hand, the l_____ s_____ m_____ e_____, p_____ a c_____ r_____ in p_____ e_____ r_____.

반면 대뇌변연계는 더 일찍 성숙하여 정서적 반응을 처리하는 데 중심적인 역할을 한다.

98. Because of its e_____ d_____, it is more likely to i_____ d_____.

그것의 더 이른 발달로 인해 그것이 의사 결정에 영향을 미칠 가능성이 더 높다.

99. D_____ in the a_____ b_____ is l_____ by e_____ f_____ more than the p_____ of c_____.

청소년기의 뇌에서 의사 결정은 결과의 인식보다 감정적인 요인에 의해 이끌어진다.

100. Due to these d_____, there is an i_____ between f_____ d_____ r_____ by the more m_____ l_____ s_____ and l_____ d_____ by the n_____ p_____ c_____.

이러한 차이점 때문에 더 성숙한 대뇌변연계에 의해 지배되는 감정 기반 의사 결정과 아직 성숙하지 않은 전전두엽 피질 에 의한 논리 기반 의사 결정 사이에는 불균형이 존재한다.

101. This may e_____ w_____ some t_____ are more l_____ to m_____ b_____ d_____.

이것은 왜 일부 십 대들이 그릇된 결정을 내릴 가능성이 더 높은지를 설명해 줄 수 있다.

37

102. Despite the r_____ p_____ in d_____ based f_____ r_____ a_____ in recent years, in terms of i_____ p_____, they still have l_____.

최근 몇 년 동안 딥러닝 기반의 얼굴 인식 접근법의 눈에 띄는 발전에도 불구하고, 식별 성능 측면에서 여전히 그것은 한계를 가지고 있다.

103. These l_____ r_____ to the d_____ u_____ in the l_____ s_____.

이러한 한계는 학습 단계에서 사용되는 데이터베이스와 관련이 있다.

104. If the s_____ d_____ does not c_____ e_____ i_____, the r_____ may be s_____ a_____.

선택된 데이터베이스가 충분한 사례를 포함하지 않으면 그 결과가 시스템적으로 영향을 받을 수 있다.

105. For example, the p_____ of a f_____ b_____ s_____ may d_____ if the person to be i_____ was e_____ over 10 years ago.

예를 들어 식별될 사람이 10년도 더 전에 등록된 경우 안면 생체 측정 시스템의 성능이 저하될 수 있다.

106. The f_____ to c_____ is that this person may e_____ c_____ in the t_____ of the face, particularly with the a_____ of w_____ and s_____ s_____.

고려해야 할 요인은 이 사람이 특히 주름과 처진 피부가 나타나는 것을 동반한 얼굴의 질감 변화를 경험할 수 있다는 것이다.

107. These c_____ may be h_____ by w_____ g_____ or l_____.

이러한 변화는 체중 증가 또는 감소에 의해 두드러질 수 있다.

108. To c_____ this p_____, r_____ have d_____ m_____ for f_____ a_____ or d_____ d_____.

이 문제에 대응하기 위해 연구자들은 얼굴 노화나 디지털 노화 완화의 모델을 개발했다.

109. It is u_____ to c_____ for the d_____ in f_____ c_____, which a_____ over a g_____ t_____ p_____.

그것은 주어진 기간 동안 나타나는 얼굴 특성의 차이를 보완하는 데 사용된다.

C2 빈칸 어휘

38

110. The d_____ in the d_____ of our f_____ is an entirely h_____ p_____.

우리 음식의 다양성의 감소는 전적으로 인간이 만든 과정이다.

111. The b_____ l_____ of c_____ d_____ came in the decades that f_____ the Second World War.

농작물 다양성의 가장 큰 손실은 제2차 세계 대전 이후 수십 년 동안 나타났다.

112. In an a_____ to s_____ millions from extreme hunger, crop scientists f_____ w_____ to p_____ g_____ such as r_____ and w_____ on an e_____ s_____.

수백 만 명의 사람들을 극도의 배고픔에서 구하고자 하는 시도에서 작물 과학자들이 쌀과 밀과 같은 곡물을 엄청난 규모로 생산하는 방법을 발견했다.

113. And thousands of t_____ v_____ were r_____ by a small number of n_____ s_____ o_____.

그리고 수 천 개의 전통적인 종들은 소수의 새로운 초(超)생산적인 종들로 대체되었다.

114. The s_____ w_____ spectacularly w_____, at least to b_____ with.

그 전략은 적어도 처음에는 굉장히 잘 작동했다.

115. Because of it, g_____ p_____ t_____, and between 1970 and 2020 the h_____ p_____ more than d_____.

그것 때문에 곡물 생산량은 세 배가 되었고 1970년과 2020년 사이에 인구는 두 배 이상 증가했다.

116. L_____ the c_____ of that s_____ to one side, the d_____ of c_____ more u_____ c_____ is that they are more at r_____ when it comes to d_____.

그 전략의 기여를 차치하고, 더 획일적인 작물을 만드는 것의 위험은 그것들이 재앙과 관련해 더 큰 위험에 처한다는 것이다.

117. Specifically, a g_____ f_____ s_____ that d_____ o_____ just a n_____ s_____ of p_____ has a g_____ c_____ of not being able to s_____ d_____, p_____ and climate e_____.

특히 농작물의 좁은 선택에만 의존하는 세계적인 식량 시스템은 질병, 해충 및 기후 위기로부터 생존하지 못할 더 높은 가능성을 가진다.

118. Between 1940 and 2000, Cuba **r**_____ the **w**_____ **b**_____ **s**_____.

1940년과 2000년 사이에 쿠바는 세계 야구계를 지배했다.

119. They **w**_____ 25 of the first 28 World Cups and 3 of 5 Olympic Games.

그들은 첫 28회의 월드컵 중 25회와 5회의 올림픽 게임 중 3회를 이겼다.

120. The Cubans were known for **w**_____ **u**_____ **c**_____ in **r**_____ from **h**_____ to **t**_____, a **s**_____ **c**_____ to the more **c**_____ North American style **f**_____ grey or white pants.

쿠바인들은 머리부터 발끝까지 빨간색으로 뒤덮인 유니폼을 입는 것으로 알려져 있었는데, 이것은 회색이나 흰색 바지를 특징으로 하는 더 보수적인 북미 스타일과 강한 대조를 이룬다.

121. Not only were their **a**_____ **t**_____ **s**_____, the Cubans **a**_____ even **s**_____ from just the **c**_____ of their **u**_____.

쿠바인들의 운동 재능이 뛰어났을 뿐만 아니라 그들은 그들의 유니폼의 색깔만으로도 훨씬 더 강하게 보였다.

122. A **g**_____ would not even **s**_____ and the **o**_____ **t**_____ would already be **s**_____.

경기가 시작하지 않았는데도 상대 팀은 이미 겁에 질리곤 했다.

123. A few years ago, Cuba **a**_____ that **u**_____ **s**_____, **m**_____ it and perhaps **c**_____ to other countries' style; interestingly, the **n**_____ **t**_____ has **d**_____ since that time.

몇 년 전 쿠바는 유니폼을 현대화하고 아마도 다른 나라의 스타일에 맞추면서 그 유니폼 스타일을 바꿨다. 흥미롭게도 국가 대표 팀은 그 시기부터 쇠퇴해 왔다.

124. The **c**_____ that **r**_____ **i**_____ **b**_____ for decades has not been on **t**_____ since that **u**_____ **c**_____.

수십 년 동안 국제 야구를 지배했던 그 나라는 그 유니폼 교체 이후로 정상에 오른 적이 없었다.

125. **T**_____ are **i**_____ for a **t**_____; while a **t**_____ **b**_____ or **i**_____ can **a**_____ to keep up with **p**_____ times, if it **a**_____ or **n**_____ its **r**_____, **n**_____ **e**_____ can **s**_____.

전통은 팀에게 중요하다. 팀 브랜드나 이미지는 현시대를 따르기 위해 조정될 수 있지만 팀이 그들의 뿌리를 버리거나 무시하면 부정적인 영향이 표면화될 수 있다.

C2 빈칸 어휘

40

126. Many of the f_____ m_____ of c_____ e_____ d_____ n_____ c_____ between c_____ and g_____ by u_____ c_____ from t_____ p_____ g_____ and a_____ them to c_____.

문화 진화의 많은 초기 모델들은 이론 집단 유전학의 개념을 사용함으로써 그리고 그것들을 문화에 적용함으로써 문화와 유전자 사이의 주목할 만한 접점을 이끌어 냈다.

127. C_____ p_____ of t_____, i_____, and s_____ are conceptually l_____ to g_____ p_____ of t_____, m_____, and s_____.

전파, 혁신, 선택의 문화적 방식은 전달, 돌연변이, 선택의 유전적 과정과 개념적으로 유사하다.

128. However, these a_____ had to be m_____ to a_____ f_____ the d_____ between g_____ and c_____ t_____.

그러나 이러한 접근법은 유전자의 전달과 문화 전파 사이의 차이점을 설명하기 위해 수정되어야만 했다.

129. For example, we do not e_____ the c_____ t_____ to f_____ the r_____ of g_____ t_____ s_____.

예를 들어, 우리는 문화 전파가 유전자 전달의 규칙을 엄격하게 따를 것이라고 예상하지 않는다.

130. If two b_____ p_____ have d_____ f_____ of a c_____ t_____, their child is not necessarily e_____ likely to a_____ the mother's or father's form of that t_____.

만약 두 명의 생물학적인 부모가 서로 다른 문화적인 특성의 형태를 가진다면, 그들의 자녀는 반드시 엄마 혹은 아빠의 그 특성의 형태를 동일하게 획득하지 않을 수 있다.

131. Further, a c_____ can a_____ c_____ t_____ not only from its p_____ but also from n_____ a_____ and p_____; thus, the f_____ of a c_____ t_____ in the p_____ is relevant beyond just the p_____ that an i_____ p_____ h_____ that t_____.

더욱이 아이는 문화적인 특성을 부모로부터 뿐만 아니라 부모가 아닌 성인이나 또래로부터도 얻을 수 있다. 따라서 집단의 문화적인 특성의 빈도는 단지 한 개인의 부모가 그 특성을 가졌을 확률을 넘어서 유의미하다.

132. -> E_____ c_____ e_____ m_____ u_____ the s_____ between c_____ and g_____ but had to be r_____ since c_____ t_____ a_____ for more d_____ f_____ than g_____ t_____.

-> 초기의 문화 진화 모델들은 문화와 유전자 사이의 유사성을 사용했지만, 문화 전파가 유전자의 전달보다 더 다양한 요인을 허용하기 때문에 수정되어야만 했다.

133. A ball t_____ into the a_____ is a_____ upon by the i_____ f_____ g_____ it, p_____ as i_____ of movement and t_____ to c_____ it in the s_____ s_____ l_____, and by the c_____ p_____ of g_____ d_____, as well as by the r_____ of the a_____.

공중으로 던져진 공은 초기에 그것에 주어진 힘에 의해 움직여지는데, 운동의 관성으로 지속하며 같은 직선으로 나아가려는 경향을 보이고, 공기의 저항뿐만 아니라 아래로 지속적으로 당기는 중력에 의해서도 움직여진다.

134. It m_____, accordingly, in a c_____ p_____.

그에 맞춰 공은 곡선의 경로로 움직인다.

135. Now the p_____ does not r_____ the w_____ of any p_____ f_____; there is simply the c_____ of the t_____ e_____ f_____ m_____; but in a real s_____, there is s_____ in the t_____ a_____ besides the i_____ action of three forces, namely, their j_____ a_____.

이제 그 경로는 어떤 특정한 힘의 작동을 나타내지는 않는다. 언급된 세 가지 기본적인 힘의 결합이 존재할 뿐이다. 하지만 사실은 세 가지 힘의 고립된 작용 외에 전체적인 작용에 무언가가 있다. 이름하여 그들의 공동 작용이다.

136. In the same way, when two or more human i_____ are t_____, their m_____ r_____ and their a_____ into a g_____ are things which would not be r_____ if we c_____ our a_____ to e_____ i_____ s_____.

같은 방식으로, 두 명 혹은 그 이상의 인간 개인이 같이 있을 때 그들의 상호 관계와 그들의 집단으로의 배치는 만약 우리가 관심을 개별적으로 각각의 개인에게 국한시킨다면 드러나지 않을 것들이다.

137. The s_____ of g_____ b_____ is greatly i_____ in the case of h_____ b_____ by the f_____ that some of the t_____ to a_____ of the i_____ are r_____ d_____ to o_____ p_____, and could not be a_____ e_____ by other persons a_____ as s_____.

개인 행동의 몇몇 경향은 명백하게 다른 사람들과 관련이 있고 자극으로 작동하는 다른 사람들 없이는 유발되지 않을 수 있다는 사실로 인해 그룹 행동의 중요성이 인간의 경우 크게 증가된다.

138. An i_____ in c_____ i_____ would not r_____ their c_____ t_____, their t_____ towards the o_____ s_____, their p_____ t_____ towards c_____.

완전한 고립 속의 개인은 그들의 경쟁적인 성향, 이성에 대한 그들의 성향, 아이에 대한 그들의 보호적 성향을 드러내지 않을 것이다.

139. This s_____ that the t_____ of h_____ n_____ do not fully a_____ until the i_____ is b_____ into r_____ with other i_____.

이것은 개인이 다른 개인과의 관계에 관여될 때까지는 인간 본성의 특성이 완전히 나타나지 않는다는 것을 보여 준다.

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they **[simply / simple]** run the race **[laying / laid]** out for them. They do **[well enough / enough well]** in school to keep **[advancing / to advance]**. Maybe they manage **[to get / getting]** a good job at a well-run company. But so many think and act as if their learning journey **[ending / ends]** with college. They have **[been checked / checked]** all the boxes in the life **[that / what]** **[laid / was laid]** out for them and now **[lacks / lack]** a road map **[describing / described]** the right ways to move forward and **[continue / continuing]** to grow. In truth, that's when the journey really begins. When school **[finishes / is finished]**, your growth becomes **[voluntarily / voluntary]**. Like healthy eating habits or a regular exercise program, you need **[committing / to commit]** to it and **[devote / devotes]** thought, time, and energy to it. Otherwise, it simply won't **[happen / be happened]** — and your life and career are likely **[to stop / stopping]** **[to progress / progressing]** as a result.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they simply run the race ①laid out for them. They do well enough in school to keep ②advancing. Maybe they manage to get a good job at a well-run company. But so many think and act as if their learning journey ends with college. They have checked all the boxes in the life that was laid out for them and now lack a road map ③describing the right ways to move forward and continue to grow. In truth, that's ④when the journey really begins. When school is finished, your growth becomes voluntary. Like healthy eating habits or a regular exercise program, you need to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen — and your life and career are likely to stop ⑤to progress as a result.

21

Many people take the commonsense view **[which / that]** color **[are / is]** an objective property of things, or of the light **[what / that]** **[bounce / bounces]** off **[them / it]**. They say a tree's leaves are green **[because / because of]** they reflect green light — a greenness **[that / what]** **[is / are]** just as **[real / really]** as the leaves. Others argue **[that / what]** color doesn't inhabit the physical world at all but **[exist / exists]** only in the eye or mind of the viewer. They maintain **[what / that]** if a tree **[fell / felled]** in a forest and no one **[was / is]** there to see it, its leaves would **[have been / be]** colorless — and **[so / neither]** **[everything else would / would everything else]**. They say there **[is / are]** no such thing as color; there are only the people **[what / who]** **[see / sees]** it. Both positions are, in a way, **[correctly / correct]**. Color is objective and subjective — "the place," as Paul Cezanne put it, "**[where / which]** our brain and the universe meet." Color **[creates / is created]** when light from the world **[registered / is registered]** by the eyes and **[interpreting / interpreted]** by the brain.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Many people take the commonsense view ①that color is an objective property of things, or of the light that bounces off them. They say a tree's leaves are green because they reflect green light — a greenness that is just as ②real as the leaves. Others argue that color doesn't inhabit the physical world at all but ③exist only in the eye or mind of the viewer. They maintain that if a tree fell in a forest and no one was there to see it, its leaves would be colorless — and so ④would everything else. They say there is no such thing as color; there are only the people who see it. Both positions are, in a way, correct. Color is objective and subjective — "the place," as Paul Cezanne put it, "where our brain and the universe meet." Color ⑤is created when light from the world is registered by the eyes and interpreted by the brain.

Kids **[tire / tired]** of their toys, college students get sick of cafeteria food, and sooner or later most of us **[losing / lose]** interest in our favorite TV shows. The bottom line is **[that / what]** we humans are **[easily / easy]** **[bored / boring]**. But why should this be true? The answer lies **[burying / buried]** deep in our nerve cells, **[that / which]** **[are designed / designed]** to reduce their initial **[excited / exciting]** response to stimuli each time they **[occur / are occurred]**. At the same time, these neurons enhance their responses to things **[what / that]** **[changes / change]** — especially things **[that / what]** change **[quickly / quick]**. We probably evolved this way **[because / because of]** our ancestors got more survival value, for example, from **[attend / attending]** to **[what / that]** was moving in a tree than to the tree **[itself / themselves]**. Boredom in reaction to an unchanging environment **[turn / turns]** down the level of neural excitation so that new stimuli stand out more. It's the neural equivalent of **[turning / turn]** off a front door light to see the fireflies.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Kids ①tire of their toys, college students get sick of cafeteria food, and sooner or later most of us lose interest in our favorite TV shows. The bottom line is that we humans are easily bored. But why should this be true? The answer lies buried deep in our nerve cells, which ②are designed to reduce their initial excited response to stimuli each time they occur. At the same time, these neurons enhance their responses to things that change — especially things that change quickly. We probably evolved this way because our ancestors got more survival value, for example, from attending to ③which was moving in a tree (such as a puma) than to the tree itself. Boredom in reaction to an unchanging environment ④turns down the level of neural excitation so that new stimuli (like our ancestor's hypothetical puma threat) stand out more. It's the neural equivalent of ⑤turning off a front door light to see the fireflies.

[Many / Much] of the first models of cultural evolution **[drew / drawing]** noticeable connections between culture and genes by **[use / using]** concepts from theoretical population genetics and **[applying / applied]** them to culture. Cultural patterns of transmission, innovation, and selection **[is / are]** **[conceptually / conceptual]** **[likening / likened]** to genetic processes of transmission, mutation, and selection. However, these approaches had to **[be modified / modify]** to account for the differences between genetic and cultural transmission. For example, we do not expect the cultural transmission **[to follow / following]** the rules of genetic transmission **[strictly / strict]**. If two biological parents have different forms of a cultural trait, their child is not **[necessarily / necessary]** **[equal / equally]** likely **[to acquire / acquiring]** the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population **[is / are]** **[relevant / relevantly]** beyond just the probability **[which / that]** an individual's parents had that trait.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

Many of the first models of cultural evolution drew noticeable connections between culture and genes by using concepts from theoretical population genetics and ①applying them to culture. Cultural patterns of transmission, innovation, and selection are conceptually ②likened to genetic processes of transmission, mutation, and selection. However, these approaches had ③to be modified to account for the differences between genetic and cultural transmission. For example, we do not expect the cultural transmission to follow the rules of genetic transmission strictly. If two biological parents have different forms of a cultural trait, their child is ④not necessarily equally likely to acquire the mother's or father's form of that trait. Further, a child can acquire cultural traits not only from its parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population is relevant beyond just the probability ⑤which an individual's parents had that trait. —> Early cultural evolution models used the similarity between culture and genes but had to be revised since cultural transmission allows for more diverse factors than genetic transmission.

41-42

A ball **[throwing / thrown]** into the air **[is acted / acts]** upon by the initial force **[giving / given]** it, **[persisted / persisting]** as inertia of movement and **[tending / tended]** **[carrying / to carry]** it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there **[are / is]** simply the combination of the three elementary forces **[mentioned / mentioning]**; but in a real sense, there **[are / is]** something in the total action besides the **[isolated / isolating]** action of three forces, namely, **[its / their]** joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group **[is / are]** things **[what / which]** would not **[be revealed / reveal]** if we **[confine / confined]** our attention to each **[individual / individuals]** **[separate / separately]**. The significance of group behavior **[are / is]** **[great / greatly]** increased in the case of human beings by the fact **[that / which]** some of the tendencies to action of the individual **[is / are]** related **[definite / definitely]** to other persons, and could not **[be aroused / arouse]** except by other persons **[acted / acting]** as stimuli. An individual in complete isolation would not **[reveal / be revealed]** their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows **[what / that]** the traits of human nature do not **[full / fully]** appear until the individual **[brings / is brought]** into relationships with other individuals.

☑ 다음 밑줄 친 부분 중 어법상 틀린 것은?

A ball thrown into the air is acted upon by the initial force given it, ①persisting as inertia of movement and tending to carry it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. It moves, accordingly, in a curved path. Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces ②mentions; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things ③which would not be revealed if we confined our attention to each individual separately. The significance of group behavior is greatly increased in the case of human beings by the fact ④that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual ⑤is brought into relationships with other individuals.

B1 어법 O/X

● 어법상 틀린 곳이 있다면 표시한 후 바르게 수정하세요

All experimental equipment must be handled with care. O ✓ | X

A warehouse is a large facility which products are storing before it is sold. O | X ✓
↳ where ↳ stored ↳ they are

20 |

01. Unfortunately, many people don't take personal responsibility for its own growth. O | X

02. Instead, they simple run the race laying out for them. O | X

03. They do enough well in school to keep to advance. O | X

04. Maybe they manage getting a good job at a well-run company. O | X

05. But so much think and act like their learning journey end with college. O | X

06. They have been checked all the boxes in the life what laid out for them and now lacks a road map described the right ways to move forward and continuing growing. O | X

07. In truth, that's which the journey really begins. O | X

08. When school finishes, your growth becomes voluntary. O | X

09. Like healthy eating habits or a regular exercise program, you need committing to it and devotes thought, time, and energy to it. O | X

10. Otherwise, it simply won't happen — and your life and career are likely stopping to progress as a result. O | X

21 |

11. Much people take the commonsense view what color are an objective property of things, or of the light what bounce off them. O | X

12. They say a tree's leaves are green because of it reflects green light — a greenness what are just as real as the leaves. O | X

13. Others argue what color doesn't inhabit the physical world at all but exist only in the eye or mind of the viewer. O | X

14. They maintain what that a tree fell in a forest and no one is there to see it, its leaves would have been colorless — and everything else would so. O | X

15. They say there are no such thing as color; there are only the people what sees it. O | X

16. Both positions do, in a way, correctly. O | X

17. Color is objective and subjective — "the place," as Paul Cezanne put it, "which our brain and the universe meet." O | X

18. Color creates when light from the world are registering by the eyes and interpreting by the brain. O | X

B1 어법 O/X

22 |

19. When written a novel, research for information needs to do. O | X

20. The thing is what some kinds of fiction demands a higher level of detail: crime fiction, for example, or scientific thrillers. O | X

21. The information is never hard finding; one website for authors even organize trips to police stations, in order to crime writers can get it right. O | X

22. Often, a polite letter will earn you permission to visit a particular location and records every the details what you need. O | X

23. But remembering what you will drive your readers to boredom if you think what you need packing everything you discovers into your work. O | X

24. The details what matters is that what reveals the human experience. O | X

25. The crucial thing is tell a story, finds the characters, the tension, and the conflict — not the train timetable or the building blueprint. O | X

23 |

26. Near everything has to go through your mouth to get to the rest of you, from food and air to bacteria and viruses. O | X

27. A healthy mouth can help your body getting that it needs and prevents them from harm — with adequately space for air to travel to your lungs, and healthy teeth and gums what prevents harmful microorganisms from enter your bloodstream. O | X

28. From the moment you create, oral health affects all aspect of your life. O | X

29. What happen in the mouth are usually just the tip of the iceberg and a reflection of that is happened in other parts of the body. O | X

30. Poor oral health can be a cause of a disease what is affected the entirely body. O | X

31. The microorganisms in an unhealthy mouth can enter the bloodstream and travels anywhere in the body, posed seriously health risks. O | X

B1 어법 O/X

24 |

32. Kids tired of their toys, college students got sick of cafeteria food, and sooner or later most of ourselves lose interest in our favorite TV shows. O | X

33. The bottom line is what we humans are easy boring. O | X

34. But why should this be true? O | X

35. The answer lies burying deep in our nerve cells, that design to reduce their initial exciting response to stimuli each time they are occurred. O | X

36. At the same time, these neurons enhance their responses to things what changes — especially things what change quick. O | X

37. We probably evolved this way because of our ancestors got more survival value, for example, from attend to that was moved in a tree (such as a puma) than to the tree themselves. O | X

38. Boredom in reaction to an unchanged environment turn down the level of neural excitation in order to new stimuli (like our ancestor's hypothetical puma threat) stand out more. O | X

39. It's the neural equivalent of turn off a front door light to see the fireflies. O | X

29 |

40. Some countries have proposed tougher guidelines for determine brain death when transplantation — transferr organs to others — are under consideration. O | X

41. In several European countries, there is legal requirements what specifies what a whole team of doctors must agree over the diagnosis of death in the case of a potential donor. O | X

42. The reason for these strict regulations for diagnose brain death in potentially organ donors are, no doubt, to ease public fears of a premature diagnosis of brain death for the purpose of obtain organs. O | X

43. But it is questionable what these requirements reduce public suspicions as many as they create them. O | X

44. They certainly maintain mistaking beliefs what diagnose brain death are an unreliable process lacked precision. O | X

45. As a matter of consistency, at least, criteria for diagnose the deaths of organ donors should be exact the same as for that for which immediately burial or cremation intends. O | X

B1 어법 O/X

30 |

46. The term minimalism is given a negative impression to some people which think what it is all about sacrificed valuable possessions. O | X

47. This insecurity naturally stems from their attachment to their possessions. O | X

48. It is difficult distancing one from something what has around for quite some time. O | X

49. Been an emotionally animal, human beings give meaning to the things around them. O | X

50. So, the question arisen here is what if minimalism will hurt one's emotions, why becomes a minimalist? O | X

51. The answer is very simple; the assumption of the question is fundamental wrong. O | X

52. Minimalism does not hurt emotions. O | X

53. You might feel a bit sad while get rid of a useless item but sooner than later, this feeling will be overcoming by the joy of clarity. O | X

54. Minimalists never argue what you should leave all convenience of the modern era. O | X

55. They are of the view what you only need eliminating stuff what is unusing or not going to use in the near future. O | X

31 |

56. A remarkable characteristic of the visual system is what it has the ability of adapt themselves. O | X

57. Psychologist George M. Stratton made this clearly in an impressive self-experiment. O | X

58. Stratton wore reversed glasses for several days, that literal turned the world upside down for him. O | X

59. In the beginning, this is caused him great difficulties: just put food in his mouth with a fork were a challenge for him. O | X

60. With time, however, his visual system were adjusted to the new stimuli from reality, and he was able acting normally in his environment again, even seen it upright when he concentrating. O | X

61. As he took off his reversed glasses, he was again confronting with problems: he used the wrong hand when he wanted reaching for something, for example. O | X

62. Fortunately, Stratton could be reversed the perception, and he did not have to wear reversed glasses for the rest of his life. O | X

63. For him, everything returned to normally after one day. O | X

B1 어법 O/X

32 |

64. Participants in a study asked to answer questions like "Why does the moon has phases?" O | X

65. Half the participants told to search for the answers on the internet, while another half allowed doing so. O | X

66. Then, in the second part of the study, every of the participants presented with a new set of questions, such as "Why does Swiss cheese have holes?" O | X

67. These questions unrelated to the ones asking during the first part of the study, so participants what using the internet had absolutely no advantage over those which hasn't. O | X

68. You would think what both set of participants would be equal sure or unsure about how well could they answer the new questions. O | X

69. But those which used the internet in the first part of the study were rated them as more knowledgeable than those who hadn't, even about questions they hadn't been searched online for. O | X

70. The study suggests what have access to unrelated information were enough to pump up their intellectual confidence. O | X

33 |

71. Anthropologist Gregory Bateson suggests what we tend understand the world by focus in on particular features within it. O | X

72. Taking platypuses. We might zoom in so close to their fur what each hair appear differently. O | X

73. We might also zoom out to the extent what it is appeared as a single, uniform object. O | X

74. We might take the platypus as an individual, or we might be treated it as part of a larger unit such as a species or an ecosystem. O | X

75. It's possible moving between much of these perspectives, despite we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entirely ecosystems. O | X

76. Crucially, however, we can only take up one perspective at a time. O | X

77. We can pay attention to the varying behavior of individual animals, looks at that unite them into a single species, or looks at them as part of bigger ecological patterns. O | X

78. All possible perspective involves emphasized certainly aspects and ignored others. O | X

B1 어법 O/X

34 |

79. Plato's realism includes every aspects of experience but is most easily explaining by consider the nature of mathematical and geometrical objects such as circles. O | X

80. He asked the question, what is a circle? O | X

81. You might indicate a particular example carving into stone or drawn in the sand. O | X

82. However, Plato would have pointed out what, if you look enough closely, you would see what neither it, or indeed any physical circle, were perfect. O | X

83. They all possessed flaws, and all was subject changing and decaying with time. O | X

84. So how can we talk about perfect circles if we cannot actually see or touches them? O | X

85. Plato's extraordinary answer was what the world we see are a poor reflection of a deeper unseen reality of Forms, or universals, which perfect cats are chased perfect mice in perfect circles around perfect rocks. O | X

86. Plato believed what the Forms or universals are the true reality what exist in an invisible but perfect world beyond our senses. O | X

35 |

87. In statistics, the law of large numbers describe a situation which have more data are better for make predictions. O | X

88. According to it, the more often an experiment conducts, the closely the average of the results can expect matching the true state of the world. O | X

89. For instance, on your first encounter with the game of roulette, you may have beginner's luck after bet on O | X

90. But the more often you repeat this bet, the closely the relatively frequency of wins and losses expects appoaching the true chance of winning, meant what your luck will at some point fading away. O | X

91. Similarly, car insurers collect large amounts of data to figure out the chances what drivers will cause accidents, depended on their age, region, or car brand. O | X

92. Both casinos and insurance industries are relied on the law of large numbers to balance individual losses. O | X

B1 어법 O/X

36 |

93. The adolescent brain is not full developed until their early twenties. O | X

94. This means the way the adolescents' decision-making circuits integrates and processes information may put themselves at a disadvantage. O | X

95. One of their brain region what mature later are the prefrontal cortex, that is the control center, tasking with think ahead and evaluate consequences. O | X

96. It is the area of the brain responsible for prevent you from send off an initial angry text and modify it with kinder words. O | X

97. On the other hand, the limbic system matures earlier, played a central role in process emotional responses. O | X

98. Because its earlier development, it is more likely influencing decision-making. O | X

99. Decision-making in the adolescent brain leads by emotional factors more than the perception of consequences. O | X

100. Because these differences, there is an imbalance between feeling-based decision-making ruling by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. O | X

101. This may explain what are some teens more likely making badly decisions. O | X

37 |

102. Although the remarkable progress in deep-learning basing facial recognition approaches in recent years, in terms of identification performance, they still have limitations. O | X

103. These limitations relating to the database using in the learning stage. O | X

104. If the selected database does not contain enough instances, the result may be systematical affecting. O | X

105. For example, the performance of a facial biometric system may decrease if the person to identify enrolled over 10 years ago. O | X

106. The factor to consider are what this person may experience changes in the texture of the face, particular with the appearance of wrinkles and sagging skin. O | X

107. These changes may highlight by weight gain or loss. O | X

108. To counteract this problem, researchers have been developed models for face aging or digital de-aging. O | X

109. It is used compensating for the differences in facial characteristics, that appears over a giving time period. O | X

B1 어법 O/X

38 |

110. The decline in the diversity of our food are an entire human-made process. O | X

111. The biggest loss of crop diversity came in the decades what following the Second World War. O | X

112. In an attempt to save millions from extremely hunger, crop scientists found ways to produce grains such as rice and wheat on an enormous scale. O | X

113. And thousands of traditional varieties replaced a small number of new super-productive one. O | X

114. The strategy worked spectacular well, at least to begin with. O | X

115. Because it, grain production tripled, and between 1970 and 2020 the human population more than doubled. O | X

116. Leave the contribution of that strategy to one side, the danger of create more uniform crops are what it is more at risk when it comes to disasters. O | X

117. Specifically, a global food system what is depended on just a narrow selection of plants have a greater chance of not be able surviving diseases, pests and climate extremes. O | X

39 |

118. Between 1940 and 2000, Cuba ruled the world baseball scene. O | X

119. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. O | X

120. The Cubans known for wear uniforms covering in red from head to toe, a strong contrast to the more conservative North American style featured grey or white pants. O | X

121. Not only did their athletic talents superior, the Cubans were appeared very stronger from just the colour of their uniforms. O | X

122. A game would not even start and the opposed team would already scare. O | X

123. A few years ago, Cuba altered that uniform style, modernized it and perhaps conformed to other countries' style; interestingly, the national team has been declined since that time. O | X

124. The country what ruled international baseball for decades have not been on top since that uniform change. O | X

125. Traditions are important for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglect its roots, negative effects can be surfaced. O | X

B1 어법 O/X

40 |

126. Much of the first models of cultural evolution drew noticeable connections between culture and genes by use concepts from theoretical population genetics and applied them to culture. O | X

127. Cultural patterns of transmission, innovation, and selection are conceptual likening to genetic processes of transmission, mutation, and selection. O | X

128. However, these approaches had to modify to account for the differences between genetic and cultural transmission. O | X

129. For example, we do not expect the cultural transmission following the rules of genetic transmission strict. O | X

130. If two biological parents have different forms of a cultural trait, their child is not necessary equal likely acquiring the mother's or father's form of that trait. O | X

131. Further, a child can acquire cultural traits not only from their parents but also from nonparental adults and peers; thus, the frequency of a cultural trait in the population are relevantly beyond just the probability what an individual's parents had that trait. O | X

132. -> Early cultural evolution models using the similarity between culture and genes but had to revise since cultural transmission allows for more diverse factors than genetic transmission. O | X

41~42 |

133. A ball throwing into the air acts upon by the initial force giving it, persisted as inertia of movement and tended carrying it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air. O | X

134. It moves, accordingly, in a curving path. O | X

135. Now the path does not represent the working of any particular force; there are simply the combination of the three elementary forces mentioning; but in a real sense, there are something in the total action besides the isolating action of three forces, namely, their joint action. O | X

136. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group is things what would not reveal if we confine our attention to each individual separately. O | X

137. The significance of group behavior are great increasing in the case of human beings by the fact what some of the tendencies to action of the individual is related definite to other persons, and could not arouse except by other persons acted as stimuli. O | X

138. An individual in complete isolation would not be revealed their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. O | X

139. This shows what the traits of human nature do not full appear until the individual brings into relationships with other individuals. O | X

나쁜 구강 건강은 전체 몸에 영향을 끼치는 질병의 원인일 수 있다.

31. The microorganisms in an unhealthy mouth can enter the bloodstream and _____ anywhere in the body, _____ serious health risks.

건강하지 않은 입안의 미생물은 혈류로 들어가고 신체의 어느 곳이든 이동하여 심각한 건강상의 위험을 초래할 수 있다.

C1 빈칸 어법

24

32. Kids _____ of their toys, college students _____ sick of cafeteria food, and sooner or later most of us _____ interest in our favorite TV shows.

아이들은 자기들의 장난감에 지루해하고, 대학생들은 카페테리아 음식에 싫증을 내고, 머지않아 우리 중 대부분은 우리가 가장 좋아하는 TV 쇼에 흥미를 잃는다.

33. The bottom line is _____ we humans are _____ _____.

요점은 우리 인간이 쉽게 지루해한다는 것이다.

34. But why should this be true?

그런데 왜 이것이 사실이어야 할까?

35. The answer lies _____ deep in our nerve cells, _____ _____ _____ _____ _____ their initial _____ response to stimuli each time they _____.

답은 자극이 일어날 때마다 그것에 대한 초기의 흥분된 반응을 약화하도록 설계된 우리의 신경 세포 내에 깊이 숨어 있다.

36. At the same time, these neurons enhance their responses to things _____ _____ — especially things _____ _____ _____.

동시에 이 뉴런들은 변화하는 것들, 특히 빠르게 변화하는 것들에 대한 반응을 강화한다.

37. We probably evolved this way _____ our ancestors got more survival value, for example, from _____ to _____ _____ _____ in a tree (such as a puma) than to the tree _____.

예를 들면 우리는 아마도 우리의 조상이 나무 그 자체보다 (퓨마처럼) 나무에서 움직이는 것에 주의를 기울이는 것으로부터 더 많은 생존 가치를 얻었기 때문에 이런 방식으로 진화했을 것이다.

38. Boredom in reaction to an unchanging environment _____ _____ the level of neural excitation _____ _____ new stimuli (like our ancestor's hypothetical puma threat) stand out more.

변하지 않는 환경에 대한 반응으로의 지루함은 신경 흥분의 수준을 낮춰 (우리 조상이 가정한 퓨마의 위협과 같은) 새로운 자극이 더 두드러지게 한다.

39. It's the neural equivalent of _____ _____ a front door light to see the fireflies.

이것은 반딧불이를 보기 위해 앞문의 불을 끄는 것의 신경적 대응물이다.

29

40. Some countries _____ _____ tougher guidelines for _____ brain death when transplantation — _____ organs to others — _____ under consideration.

일부 국가는 장기 이식, 즉 다른 사람에게 장기를 전달하는 것을 고려 중일 때 뇌사를 결정하는 것에 대한 더 엄격한 지침을 제안했다.

41. In several European countries, there _____ legal requirements _____ _____ _____ a whole team of doctors must agree over the diagnosis of death in the case of a potential donor.

몇몇 유럽 국가에는 잠재적 기증자의 경우 의사 팀 전체가 사망 진단에 동의해야 한다고 명시하는 법적 요건들이 있다.

42. The reason for these strict regulations for _____ brain death in potential organ donors _____ , no doubt, _____ _____ public fears of a premature diagnosis of brain death for the purpose of _____ organs.

잠재적인 장기 기증자의 뇌사 진단에 대한 이러한 엄격한 규정들의 이유는 의심할 바 없이 장기 확보를 위한 너무 이른 뇌사 진단에 대한 대중의 두려움을 완화하기 위한 것이다.

43. But it is questionable _____ these requirements _____ public suspicions as _____ as they create _____.

하지만 이러한 요건들이 대중의 의심을 만들어 내는 만큼 그것을 줄여 주는지는 의문이다.

44. They certainly maintain mistaken beliefs _____ _____ brain death _____ an unreliable process _____ precision.

그것들은 뇌사 진단이 정확성이 결여된 신뢰하기 어려운 과정이라는 잘못된 믿음을 확실히 유지시킨다.

45. As a matter of consistency, at least, criteria for _____ the deaths of organ donors should be _____ the same as for those _____ _____ immediate burial or cremation _____ _____.

적어도 일관성의 이유로 장기 기증자의 사망 진단 기준은 즉각적인 매장 또는 화장이 예정된 사람들에 대한 그것과 정확히 동일해야 한다.

C1 빈칸 어법

30

46. The term minimalism _____ a negative impression to some people _____ _____ _____ it is all about _____ valuable possessions.

미니멀리즘이라는 용어는 그것을 소중한 소유물을 희생하는 것에 관한 것으로만 생각하는 일부 사람들에게 부정적인 인상을 준다.

47. This insecurity naturally _____ _____ their attachment to their possessions.

이러한 불안은 자신의 소유물에 대한 애착에서 자연스럽게 비롯된다.

48. _____ is difficult _____ _____ _____ from something _____ _____ _____ around for quite some time.

꽤 오랫동안 곁에 있어 왔던 것으로부터 자신을 멀리 두는 것은 어렵다.

49. _____ an _____ animal, human beings give meaning to the things around _____.

감정의 동물이기 때문에, 인간은 그들의 곁에 있는 물건에 의미를 부여한다.

50. So, the question _____ here is _____ if minimalism _____ _____ one's emotions, why _____ a minimalist?

그래서 여기서 생기는 질문은 미니멀리즘이 사람의 감정을 상하게 한다면 왜 미니멀리스트가 되느냐는 것이다.

51. The answer is very simple; the assumption of the question is _____ _____.

대답은 매우 간단하다. 그 질문의 가정은 근본적으로 틀리다.

52. Minimalism does not hurt emotions.

미니멀리즘은 감정을 상하게 하지 않는다.

53. You might feel a bit sad _____ _____ _____ _____ a useless item but sooner than later, this feeling will _____ _____ by the joy of clarity.

여러분은 쓸모 없는 물건을 치우면서 조금 슬퍼할 수도 있지만 머지않아 이 느낌은 명료함의 기쁨으로 극복될 것이다.

54. Minimalists never argue _____ you should _____ every convenience of the modern era.

미니멀리스트는 여러분이 현대의 모든 편의를 버려야 한다고 주장하지 않는다.

55. They are of the view _____ you only need _____ _____ stuff _____ is _____ or not going to _____ _____ in the near future.

그들은 여러분이 사용되지 않거나 가까운 미래에 사용되지 않을 물건을 없애기만 하면 된다는 견해를 가지고 있다.

31

56. A remarkable characteristic of the visual system _____ _____ it has the ability of _____ _____.

시각 체계의 두드러진 특징은 스스로 적응하는 능력이 있다는 것이다.

57. Psychologist George M. Stratton _____ this _____ in an impressive self-experiment.

심리학자 George M. Stratton은 인상적인 자가 실험에서 이것을 분명히 했다.

58. Stratton wore reversing glasses for several days, _____ _____ _____ the world upside down for him.

Stratton은 며칠 동안 반전 안경을 착용했는데 그 안경은 말 그대로 그에게 세상을 뒤집어 놓았다.

59. In the beginning, this _____ him great difficulties: just _____ food in his mouth with a fork _____ a challenge for him.

처음에 이것은 그에게 큰 어려움을 초래하였다. 포크로 음식을 입에 넣는 것조차 그에게는 도전이었다.

60. With time, however, his visual system _____ to the new stimuli from reality, and he was able _____ _____ _____ in his environment again, even _____ it upright when he _____.

그러나 시간이 지나면서 그의 시각 체계는 현실의 새로운 자극에 적응했고, 그가 집중했을 때는 심지어 똑바로 보면서, 다시 자신의 환경에서 정상적으로 행동할 수 있었다.

61. As he took off his reversing glasses, he _____ again _____ _____ problems: he used the wrong hand when he wanted _____ _____ for something, for example.

반전 안경을 벗었을 때 그는 다시 문제에 직면했다. 예를 들어 그가 무언가를 잡기를 원할 때 그는 반대 손을 사용했다.

62. Fortunately, Stratton could _____ the perception, and he did not have to wear reversing glasses for the rest of his life.

다행히 Stratton은 지각을 뒤집을 수 있었고 평생 반전 안경을 착용하지 않아도 되었다.

63. For him, everything returned to _____ after one day.

그에게 하루 만에 모든 것이 정상으로 돌아왔다.

C1 빈칸 어법

32

64. Participants in a study _____ _____ _____ _____ questions like "Why does the moon _____ phases?"

한 연구의 참가자들이 '달은 왜 상을 가지고 있을까'와 같은 질문들에 답하도록 요청받았다.

65. Half the participants _____ _____ _____ _____ for the answers on the internet, _____ _____ _____ _____ _____ _____ _____ _____ _____.

참가자의 절반은 인터넷에서 답을 검색하라는 말을 들었고 나머지 절반은 그렇게 하도록 허용되지 않았다.

66. Then, in the second part of the study, _____ of the participants _____ _____ with a new set of questions, such as "Why does Swiss cheese have holes?"

그 다음, 연구의 두 번째 단계에서 모든 참가자는 '스위스 치즈에는 왜 구멍이 있을까'와 같은 일련의 새로운 질문들을 제시받았다.

67. These questions _____ _____ to _____ _____ _____ _____ the first part of the study, so participants _____ _____ the internet _____ absolutely no advantage over those _____ _____.

이 질문들은 연구의 첫 번째 단계에서 질문받았던 것들과는 관련이 없어서 인터넷을 사용한 참가자들은 그러지 않은 참가자들 보다 이점이 전혀 없었다.

68. You would think _____ both sets of participants would be _____ sure or unsure about _____ _____ _____ _____ _____ the new questions.

여러분은 두 집단의 참가자들이 새로운 질문들에 얼마나 잘 대답할 수 있을 지에 대해 동일한 정도로 확신하거나 확신하지 못할 것으로 생각할 것이다.

69. But those _____ _____ the internet in the first part of the study _____ _____ as more _____ than those _____ _____, even about questions they _____ _____ online _____.

그러나 연구의 첫 번째 단계에서 인터넷을 사용했던 참가자들은 자신이 온라인에서 검색하지 않았던 질문들에 대해서조차 그러지 않았던 참가자들보다 스스로가 더 많이 알고 있다고 평가했다.

70. The study suggests _____ _____ access to unrelated information _____ _____ _____ _____ _____ their intellectual confidence.

이 연구는 관련 없는 정보에 접근하는 것이 그들의 지적 자신감을 부풀리기에 충분했다는 것을 시사한다.

33

71. Anthropologist Gregory Bateson suggests _____ we tend _____ _____ the world by _____ in on particular features within it.

인류학자 Gregory Bateson은 우리가 세상 안의 특정한 특징에 초점을 맞춤으로써 세상을 이해하는 경향이 있다고 제안한다.

72. _____ platypuses. We might zoom in so _____ to their fur _____ each _____ _____ _____.

오리너구리를 예로 들어 보자. 우리가 그들의 털을 매우 가까이 확대하면 각 가닥이 다르게 보인다.

73. We might also zoom out to the extent _____ it _____ as a single, uniform object.

우리는 또한 그것이 하나의 동일한 개체로 보이는 정도까지 축소할 수도 있다.

74. We might take the platypus as an individual, or we might _____ it as part of a larger unit such as a species or an ecosystem.

우리는 오리너구리를 개체로 취급할 수도 있고 종 또는 생태계와 같이 더 큰 단위의 일부로 취급할 수도 있다.

75. _____ possible _____ _____ between _____ of these perspectives, _____ we may need some additional tools and skills to zoom in on individual pieces of hair or _____ out to _____ ecosystems.

비록 개별 머리카락을 확대하거나 전체 생태계로 축소하기 위해 몇 가지 추가 도구와 기술이 필요할지도 모르지만, 이러한 많은 관점 사이를 이동하는 것은 가능하다.

76. Crucially, however, we can only take up one perspective at a time.

그러나 결정적으로 우리는 한 번에 하나의 관점만 취할 수 있다.

77. We can pay attention to the varied behavior of individual animals, _____ at _____ _____ them into a single species, or _____ at them as part of bigger ecological patterns.

우리는 개별 동물의 다양한 행동에 주의를 기울일 수 있고, 그들을 단일 종으로 통합하는 것을 살펴볼 수도 있고, 더 큰 생태학적 패턴의 일부로서 그들을 살펴볼 수도 있다.

78. Every possible perspective _____ _____ certain aspects and _____ others.

가능한 모든 관점은 특정 측면을 강조하고 다른 측면을 외면하는 것을 포함한다.

C1 빈칸 어법

34

79. Plato's realism includes all aspects of experience but _____ _____ _____ _____ by _____ the nature of mathematical and geometrical objects such as circles.

플라톤의 실재론은 경험의 모든 측면을 포함하지만, 원과 같은 수학적이고 기하학적인 대상의 특성을 고려함으로써 가장 쉽게 설명된다.

80. He asked the question, what is a circle?

그는 '원이란 무엇인가'라는 질문을 했다.

81. You might indicate a particular example _____ into stone or drawn in the sand.

여러분은 돌에 새겨져 있거나 모래에 그려진 특정한 예를 가리킬 수 있다.

82. However, Plato would _____ _____ _____, if you _____ _____ _____, you _____ _____ _____ _____ it, _____ indeed any physical circle, _____ perfect.

그러나 플라톤은 여러분이 충분히 면밀히 관찰한다면, 여러분이 그 어느 것도, 진정 어떤 물리적인 원도 완벽하지 않다는 것을 알게 될 것이라고 지적할 것이다.

83. They all possessed flaws, and all _____ _____ _____ _____ and _____ with time.

그것들 모두는 결함을 가지고 있었고, 모두 변화의 영향을 받고 시간이 지남에 따라 쇠하였다.

84. So how can we talk about perfect circles if we cannot _____ _____ or _____ _____?

그렇다면, 우리가 완벽한 원을 실제로 보거나 만질 수 없다면, 그것에 대해 어떻게 이야기할 수 있을 까?

85. Plato's extraordinary answer was _____ the world we see _____ a poor reflection of a deeper unseen reality of Forms, or universals, _____ perfect cats _____ perfect mice in perfect circles around perfect rocks.

플라톤의 비범한 대답은 우리가 보는 세상이 완벽한 고양이가 완벽한 암석 주변에서 완벽한 원을 그리며 완벽한 쥐를 쫓는 '형상' 또는 '보편자'라는 더 깊은 보이지 않는 실재의 불충분한 반영물이라는 것이다.

86. Plato believed _____ the Forms or universals _____ the true reality _____ _____ in an _____ but _____ world beyond our senses.

플라톤은 '형상' 또는 '보편자'가 보이지 않지만 우리의 감각을 넘어선 완벽한 세계에 존재하는 진정한 실재라고 믿었다.

35

87. In statistics, the law of large numbers _____ a situation _____ _____ more data _____ better for _____ predictions.

통계학에서 대수의 법칙은 더 많은 데이터를 갖는 것이 예측하는 데 더 좋은 상황을 설명한다.

88. According to it, _____ _____ _____ an experiment _____ _____, _____ _____ the average of the results can _____ _____ _____ _____ the true state of the world.

그것에 따르면 실험이 더 자주 수행될수록 그 결과의 평균이 세상의 실제 상태에 더 맞춰지는 것으로 예상될 수 있다.

89. For instance, on your first encounter with the game of roulette, you may have beginner's luck after _____ on 7.

예를 들어 룰렛 게임을 처음 접했을 때 7에 베팅한 후 여러분은 초보자의 운이 있을 수 있다.

90. But _____ _____ _____ you repeat this bet, _____ _____ the relative frequency of wins and losses _____ _____ _____ _____ the true chance of winning, _____ _____ your luck will at some point _____ away.

하지만 당신이 이 베팅을 더 자주 반복할수록 승패의 상대적인 빈도가 진짜 승률에 더 가까워질 것으로 예상되는데 이는 당신의 운이 어느 순간 사라진다는 것을 의미한다.

91. Similarly, car insurers collect large amounts of data to figure out the chances _____ drivers will cause accidents, depending on their age, region, or car brand.

마찬가지로 자동차 보험사는 운전자가 그들의 연령, 지역 또는 자동차 브랜드에 따라 사고를 일으킬 확률을 파악하기 위해 많은 양의 데이터를 수집한다.

92. _____ casinos _____ insurance industries _____ _____ the law of large numbers to balance individual losses.

카지노와 보험 산업 모두 개별 손실의 균형을 맞추기 위해 대수의 법칙에 의존한다.

C1 빈칸 어법

36

93. The adolescent brain _____ _____ _____ _____ until its early twenties.

청소년기의 뇌는 20대 초반까지는 완전히 발달하지 않는다.

94. This means _____ _____ the adolescents' decision-making circuits _____ and _____ information may put _____ at a disadvantage.

이것은 청소년의 의사 결정 회로가 정보를 통합하고 처리하는 방식이 그들을 불리하게 만들 수 있음을 의미한다.

95. _____ of their _____ _____ _____ _____ later _____ the prefrontal cortex, _____ _____ the control center, _____ with _____ ahead and _____ consequences.

나중에 성숙하는 뇌 영역 중 하나는 통제 센터인 전전두엽 피질이며, 그것은 미리 생각하고 결과를 평가하는 임무를 맡고 있다.

96. It is the area of the brain _____ for _____ you _____ _____ off an initial angry text and _____ it with kinder words.

그것은 당신이 초기의 화가 난 문자를 보내는 것을 막고 그것을 더 친절한 단어로 수정하게 하는 역할을 하는 뇌의 영역이다.

97. On the other hand, the limbic system _____ earlier, _____ a central role in _____ emotional responses.

반면 대뇌변연계는 더 일찍 성숙하여 정서적 반응을 처리하는 데 중심적인 역할을 한다.

98. _____ _____ its earlier development, it is more likely _____ _____ decision-making.

그것의 더 이른 발달로 인해 그것이 의사 결정에 영향을 미칠 가능성이 더 높다.

99. Decision-making in the adolescent brain _____ _____ by emotional factors more than the perception of consequences.

청소년기의 뇌에서 의사 결정은 결과의 인식보다 감정적인 요인에 의해 이끌어진다.

100. _____ _____ these differences, there _____ an imbalance between feeling-based decision-making _____ by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex.

이러한 차이점 때문에 더 성숙한 대뇌변연계에 의해 지배되는 감정 기반 의사 결정과 아직 성숙하지 않은 전전두엽 피질 에 의한 논리 기반 의사 결정 사이에는 불균형이 존재한다.

101. This may explain _____ _____ _____ _____ _____ _____ _____ _____ bad decisions.

이것은 왜 일부 십 대들이 그릇된 결정을 내릴 가능성이 더 높은지를 설명해 줄 수 있다.

37

102. _____ the remarkable progress in deep-learning _____ facial recognition approaches in recent years, in terms of identification performance, they still have limitations.

최근 몇 년 동안 딥러닝 기반의 얼굴 인식 접근법의 눈에 띄는 발전에도 불구하고, 식별 성능 측면에서 여전히 그것은 한계를 가지고 있다.

103. These limitations _____ to the database _____ in the learning stage.

이러한 한계는 학습 단계에서 사용되는 데이터베이스와 관련이 있다.

104. If the selected database does not contain enough instances, the result may _____ _____ _____.

선택된 데이터베이스가 충분한 사례를 포함하지 않으면 그 결과가 시스템적으로 영향을 받을 수 있다.

105. For example, the performance of a facial biometric system may _____ if the person to _____ _____ _____ _____ over 10 years ago.

예를 들어 식별될 사람이 10년도 더 전에 등록된 경우 안면 생체 측정 시스템의 성능이 저하될 수 있다.

106. The factor _____ _____ _____ _____ this person may experience changes in the texture of the face, _____ with the appearance of wrinkles and sagging skin.

고려해야 할 요인은 이 사람이 특히 주름과 처진 피부가 나타나는 것을 동반한 얼굴의 질감 변화를 경험할 수 있다는 것이다.

107. These changes may _____ _____ by weight gain or loss.

이러한 변화는 체중 증가 또는 감소에 의해 두드러질 수 있다.

108. _____ _____ this problem, researchers _____ _____ models for face aging or digital de-aging.

이 문제에 대응하기 위해 연구자들은 얼굴 노화나 디지털 노화 완화의 모델을 개발했다.

109. _____ _____ _____ _____ _____ for the differences in facial characteristics, _____ _____ over a given time period.

그것은 주어진 기간 동안 나타나는 얼굴 특성의 차이를 보완하는 데 사용된다.

C1 빈칸 어법

38

110. The decline in the diversity of our food _____ an _____ human-made process.

우리 음식의 다양성의 감소는 전적으로 인간이 만든 과정이다.

111. The biggest loss of crop diversity _____ in the decades _____ _____ the Second World War.

농작물 다양성의 가장 큰 손실은 제2차 세계 대전 이후 수십 년 동안 나타났다.

112. _____ _____ _____ _____ _____ millions from extreme hunger, crop scientists found ways _____ _____ grains such as rice and wheat on an enormous scale.

수백 만 명의 사람들을 극도의 배고픔에서 구하고자 하는 시도에서 작물 과학자들이 쌀과 밀과 같은 곡물을 엄청난 규모로 생산하는 방법을 발견했다.

113. And thousands of traditional varieties _____ _____ by a small number of new super-productive _____.

그리고 수 천 개의 전통적인 종들은 소수의 새로운 초(超)생산적인 종들로 대체되었다.

114. The strategy _____ _____ well, at least to begin with.

그 전략은 적어도 처음에는 굉장히 잘 작동했다.

115. _____ _____ it, grain production _____, and between 1970 and 2020 the human population more than _____.

그것 때문에 곡물 생산량은 세 배가 되었고 1970년과 2020년 사이에 인구는 두 배 이상 증가했다.

116. _____ the contribution of that strategy to one side, the danger of _____ more uniform crops _____ _____ _____ _____ more at risk when it comes to disasters.

그 전략의 기여를 차치하고, 더 획일적인 작물을 만드는 것의 위험은 그것들이 재앙과 관련해 더 큰 위험에 처한다는 것이다.

117. Specifically, a global food system _____ _____ on just a narrow selection of plants _____ a greater chance of not _____ _____ _____ _____ diseases, pests and climate extremes.

특히 농작물의 좁은 선택에만 의존하는 세계적인 식량 시스템은 질병, 해충 및 기후 위기로부터 생존하지 못할 더 높은 가능성을 가진다.

39

118. Between 1940 and 2000, Cuba _____ the world baseball scene.

1940년과 2000년 사이에 쿠바는 세계 야구계를 지배했다.

119. They _____ 25 of the first 28 World Cups and 3 of 5 Olympic Games.

그들은 첫 28회의 월드컵 중 25회와 5회의 올림픽 게임 중 3회를 이겼다.

120. The Cubans _____ _____ _____ _____ uniforms _____ in red from head to toe, a strong contrast to the more conservative North American style _____ grey or white pants.

쿠바인들은 머리부터 발끝까지 빨간색으로 뒤덮인 유니폼을 입는 것으로 알려져 있었는데, 이것은 회색이나 흰색 바지를 특징으로 하는 더 보수적인 북미 스타일과 강한 대조를 이룬다.

121. _____ _____ _____ _____ _____ _____ _____, the Cubans _____ _____ _____ from just the colour of their uniforms.

쿠바인들의 운동 재능이 뛰어났을 뿐만 아니라 그들은 그들의 유니폼의 색깔만으로도 훨씬 더 강하게 보였다.

122. A game would not even start and the opposing team would already _____ _____.

경기가 시작하지 않았는데도 상대 팀은 이미 겁에 질리곤 했다.

123. A few years ago, Cuba _____ that uniform style, _____ it and perhaps _____ to other countries' style; interestingly, the national team _____ _____ since that time.

몇 년 전 쿠바는 유니폼을 현대화하고 아마도 다른 나라의 스타일에 맞추면서 그 유니폼 스타일을 바꿨다. 흥미롭게도 국가 대표 팀은 그 시기부터 쇠퇴해 왔다.

124. The country _____ _____ international baseball for decades _____ _____ _____ on top since that uniform change.

수십 년 동안 국제 야구를 지배했던 그 나라는 그 유니폼 교체 이후로 정상에 오른 적이 없었다.

125. Traditions are important for a team; while a team brand or image can _____ _____ _____ _____ _____ present times, if it _____ or _____ its roots, negative effects can _____.

전통은 팀에게 중요하다. 팀 브랜드나 이미지는 현시대를 따르기 위해 조정될 수 있지만 팀이 그들의 뿌리를 버리거나 무시하면 부정적인 영향이 표면화될 수 있다.

C1 빈칸 어법

40

126. _____ of the first models of cultural evolution _____ noticeable connections between culture and genes by _____ concepts from theoretical population genetics and _____ them to culture.

문화 진화의 많은 초기 모델들은 이론 집단 유전학의 개념을 사용함으로써 그리고 그것들을 문화에 적용함으로써 문화와 유전자 사이의 주목할 만한 접점을 이끌어 냈다.

127. Cultural patterns of transmission, innovation, and selection _____ _____ _____ to genetic processes of transmission, mutation, and selection.

전파, 혁신, 선택의 문화적 방식은 전달, 돌연변이, 선택의 유전적 과정과 개념적으로 유사하다.

128. However, these approaches had _____ _____ _____ to account for the differences between genetic and cultural transmission.

그러나 이러한 접근법은 유전자의 전달과 문화 전파 사이의 차이점을 설명하기 위해 수정되어야만 했다.

129. For example, we do not expect the cultural transmission _____ _____ the rules of genetic transmission _____.

예를 들어, 우리는 문화 전파가 유전자 전달의 규칙을 엄격하게 따를 것이라고 예상하지 않는다.

130. If two biological parents have different forms of a cultural trait, their child _____ _____ _____ _____ _____ _____ _____ the mother's or father's form of that trait.

만약 두 명의 생물학적인 부모가 서로 다른 문화적인 특성의 형태를 가진다면, 그들의 자녀는 반드시 엄마 혹은 아빠의 그 특성의 형태를 동일하게 획득하지 않을 수 있다.

131. Further, a child can acquire cultural traits _____ _____ from its parents _____ _____ from nonparental adults and peers; thus, the frequency of a cultural trait in the population _____ _____ beyond just the probability _____ an individual's parents had that trait.

더욱이 아이는 문화적인 특성을 부모로부터 뿐만 아니라 부모가 아닌 성인이나 또래로부터도 얻을 수 있다. 따라서 집단의 문화적인 특성의 빈도는 단지 한 개인의 부모가 그 특성을 가졌을 확률을 넘어서 유의미하다.

41~42

132. A ball _____ into the air _____ _____ _____ by the initial force _____ it, _____ as inertia of movement and _____ _____ _____ it in the same straight line, and by the constant pull of gravity downward, as well as by the resistance of the air.

공중으로 던져진 공은 초기에 그것에 주어진 힘에 의해 움직여지는데, 운동의 관성으로 지속하며 같은 직선으로 나아가려는 경향을 보이고, 공기의 저항뿐만 아니라 아래로 지속적으로 당기는 중력에 의해서도 움직여진다.

133. It moves, accordingly, in a curved path.

그에 맞춰 공은 곡선의 경로로 움직인다.

134. Now the path does not represent the working of any particular force; there _____ simply the combination of the three elementary forces _____; but in a real sense, there _____ something in the total action besides the _____ action of three forces, namely, their joint action.

이제 그 경로는 어떤 특정한 힘의 작동을 나타내지는 않는다. 언급된 세 가지 기본적인 힘의 결합이 존재할 뿐이다. 하지만 사실은 세 가지 힘의 고립된 작용 외에 전체적인 작용에 무언가가 있다. 이름하여 그들의 공동 작용이다.

135. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group _____ things _____ _____ _____ _____ _____ _____ we _____ our attention to each individual _____.

같은 방식으로, 두 명 혹은 그 이상의 인간 개인이 같이 있을 때 그들의 상호 관계와 그들의 집단으로의 배치는 만약 우리가 관심을 개별적으로 각각의 개인에게 국한시킨다면 드러나지 않을 것들이다.

136. The significance of group behavior _____ _____ _____ in the case of human beings by the fact _____ some of the tendencies to action of the individual _____ _____ _____ to other persons, and could not _____ _____ except by other persons _____ as stimuli.

개인 행동의 몇몇 경향은 명백하게 다른 사람들과 관련이 있고 자극으로 작동하는 다른 사람들 없이는 유발되지 않을 수 있다는 사실로 인해 그룹 행동의 중요성이 인간의 경우 크게 증가된다.

137. An individual in complete isolation would not _____ their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children.

완전한 고립 속의 개인은 그들의 경쟁적인 성향, 이성에 대한 그들의 성향, 아이에 대한 그들의 보호적 성향을 드러내지 않을 것이다.

138. This shows _____ the traits of human nature _____ _____ _____ _____ until the individual _____ _____ into relationships with other individuals.

이것은 개인이 다른 개인과의 관계에 관여될 때까지는 인간 본성의 특성이 완전히 나타나지 않는다는 것을 보여 준다.

Otherwise, it simply won't happen—and your life and career are likely to stop progressing as a result.

After college, many individuals (A)_____ personal growth, lacking guidance for ongoing development, but you should continue to learn, (B)_____ dedicating to your growth for your life and career.

(A)	(B)
① ignore	compulsorily
② care for	willingly
③ neglect	autonomously
④ struggle for	voluntarily
⑤ disregard	mandatorily

다음 글을 읽고 물음에 답하시오.

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they simply run the race (A)is laid out for them. They do (B)well enough in school to keep (C)to advance. Maybe they manage to get a good job at a well-run company. But ⓐ아주 많은 사람들이 마치 그들의 배움의 여정이 대학과 함께 끝나는 것처럼 생각하고 행동한다. ⓑ그들은 그들을 위해 놓인 삶의 모든 사항을 체크했고 이제는 앞으로 나아가고 계속 성장할 수 있는 올바른 방법들을 설명해 주는 로드 맵이 없다. In truth, that's when the journey really begins. When ⓒ_____. Like healthy eating habits or a regular exercise program, you need (D)to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen—and your life and career are likely (E)stop progressing as a result.

14 윗글의 밑줄 친 (A)~(E) 중, 어법상 어색한 것을 세 개 골라 기호를 쓰고 알맞게 고쳐 쓰시오.

기호 알맞게 고친 표현
(1) _____: _____
(2) _____: _____
(3) _____: _____

15 윗글의 밑줄 친 ⓐ의 우리말을 주어진 <조건>에 알맞게 영작하시오.

<조 건>
— <보기>의 단어 및 표현을 그대로 사용할 것
— 주어진 단어를 제외하고 11단어로 영작할 것

<보 기>
act / college / as / ends with / learning journey / if

so many _____
_____.

16 윗글의 밑줄 친 ⓑ의 우리말을 다음과 같이 쓸 때, 주어진 <조건>에 알맞게 문장을 완성하시오.

<조 건>
— 적절한 관계대명사와 분사를 사용할 것
— <보기>의 단어 및 표현을 사용할 것 (필요시 변형할 것)
— 각 빈칸에 한 단어를 쓸 것

<보 기>
lay out / describe / move / for / forward / lack / the right ways / a road map

They have checked all the boxes in the life _____
_____ _____ _____ _____
_____ and now _____ _____
_____ _____ _____ _____

_____ _____ _____ _____
_____ and continue to grow.

17 윗글의 빈칸 ⓒ에 들어갈 말이 되도록 <보기>의 단어 및 표현을 알맞게 배열하시오. (필요시 변형하고 한 단어를 추가할 것)

< 보 기 >
finish / your growth / become / school / voluntary

18 다음 글의 요지를 아래와 같이 쓸 때, 빈칸에 들어갈 알맞은 말을 지문에서 찾아 한 단어로 각각 쓰시오.

Unfortunately, many people don't take personal responsibility for their own growth. Instead, they simply run the race laid out for them. They do well enough in school to keep advancing. Maybe they manage to get a good job at a well-run company. But so many think and act as if their learning journey ends with college. They have checked all the boxes in the life that was laid out for them and now lack a road map describing the right ways to move forward and continue to grow. In truth, that's when the journey really begins. When school is finished, your growth becomes voluntary. Like healthy eating habits or a regular exercise program, you need to commit to it and devote thought, time, and energy to it. Otherwise, it simply won't happen—and your life and career are likely to stop progressing as a result.

Many people misunderstand that their learning _____ with graduation from college, but even after then, _____ learning is needed for their own _____.

⑤ Certain Bacteria in the Mouth That Causes Fatal Diseases

59 다음 글의 내용과 일치하지 **않는** 것은?

Nearly everything has to go through your mouth to get to the rest of you, from food and air to bacteria and viruses. A healthy mouth can help your body get what it needs and prevent it from harm—with adequate space for air to travel to your lungs, and healthy teeth and gums that prevent harmful microorganisms from entering your bloodstream. From the moment you are created, oral health affects every aspect of your life. What happens in the mouth is usually just the tip of the iceberg and a reflection of what is happening in other parts of the body. Poor oral health can be a cause of a disease that affects the entire body. The microorganisms in an unhealthy mouth can enter the bloodstream and travel anywhere in the body, posing serious health risks.

*microorganism: 미생물

① Oral health plays a crucial role when your body gets necessary nutrients.
② Healthy teeth and gums safeguard against harmful microorganisms entering the bloodstream.
③ Oral health impacts various facets of life, influencing overall well-being.
④ The mouth can reflect the things happening in the other parts of the body.
⑤ Microorganisms in an unhealthy mouth cannot pose any health risks beyond oral issues.

*diagnosis: 진단 **donor: 기증자 ***cremation: 화장(火葬)

① Stricter guidelines to diagnose brain death when considering organ transplantation have been suggested in some countries.
② Some European countries require consensus from a team of doctors when diagnosing brain death in potential organ donors.
③ The tough regulations aim to alleviate public fears about hasty brain death diagnoses for organ harvesting.
④ The stringent requirements for diagnosing brain death in potential organ donors can create confidence in the diagnosis process.
⑤ The criteria for diagnosing the deaths of organ donors should be aligned precisely with those for individuals destined for immediate burial or cremation.

① (A): 동명사 adapting의 의미상 주어인 the visual system과 동일한 대상이므로, 목적어로 재귀대명사 itself가 쓰였다.
② (B): 5형식 동사로 쓰인 made의 목적격보어로 형용사 clear가 쓰였다.
③ (C): this는 앞에 언급된 the world를 가리킨다.
④ (D): '~에 적응했다'를 뜻하며, adapted to로 바꾸어 쓸 수 있다.
⑤ (E): 부사 off는 명사구 his reversing glasses 뒤로 이동할 수 있다.

129 다음 글의 주제로 알맞은 것은?

A remarkable characteristic of the visual system is that it has the ability of adapting itself. Psychologist George M. Stratton made this clear in an impressive self-experiment. Stratton wore reversing glasses for several days, which literally turned the world upside down for him. In the beginning, this caused him great difficulties: just putting food in his mouth with a fork was a challenge for him. With time, however, his visual system adjusted to the new stimuli from reality, and he was able to act normally in his environment again, even seeing it upright when he concentrated. As he took off his reversing glasses, he was again confronted with problems: he used the wrong hand when he wanted to reach for something, for example. Fortunately, Stratton could reverse the perception, and he did not have to wear reversing glasses for the rest of his life. For him, everything returned to normal after one day.

*reverse: 뒤집다, 반전시키다

① the background of inventing reversing glasses
② Stratton's achievement to unlock the key to optical illusions
③ human visual system that is capable of adjusting to changes
④ well-known psychologists who overcame their visual impairments
⑤ Stratton's self-experiment to prove the iniquity of people's biases

① The visual system exhibits remarkable adaptability, as highlighted by Stratton's self-experiment with reversing glasses.
② Stratton was initially challenged by the world caused by reversing glasses, and it's hard for him to put food in his mouth with a fork.
③ Stratton got used to the inverted world gradually and functioned normally with reversing glasses.
④ Stratton could perceive the revered environment upright through concentration.
⑤ Removing the reversing glasses didn't pose any challenges for Stratton, and he immediately regained normal perception.

Anthropologist Gregory Bateson suggests that we tend to understand the world by focusing in on particular features within it. Take platypuses. We might zoom in so closely to their fur that each hair appears different. We might also zoom out to the extent where it appears as a single, uniform object. We might take the platypus as an individual, or we might treat it as part of a larger unit such as a species or an ecosystem. It's possible to move between many of these perspectives, although we may need some additional tools and skills to zoom in on individual pieces of hair or zoom out to entire ecosystems. Crucially, however, we can only take up one perspective at a time. We can pay attention to the varied behavior of individual animals, look at what unites them into a single species, or look at them as part of bigger ecological patterns. Every possible perspective involves emphasizing certain aspects and ignoring others.

*anthropologist: 인류학자 **platypus: 오리너구리

① ecological features of the platypus
② tools and skills needed to study animal behavior
③ differences between a macro and a micro perspective on an object
④ perspectives on the relationship between individuals, species, and ecosystems
⑤ characteristics of perspectives that is a means by which we understand the world

In statistics, the law of large numbers describes a situation where having more data is better for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

① representative laws of probability
② how gamblers increase their chance of winning
③ what the law of large numbers is and where it is used
④ examples and limitations of the law of large numbers
⑤ what casinos and insurance industries have in common

199 다음 글의 내용과 일치하지 **않는** 것은?

For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning that your luck will at some point fade away. Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

① If you bet more frequently in a roulette game, your luck will gradually run out.
② Casinos and insurance industries offset individual losses by means of the law of large numbers.
③ According to the law of large numbers, having more data is more advantageous for predicting.
④ Automobile insurers gather great quantities of data to identify drivers who are more likely to cause accidents.
⑤ The law of large numbers predicts that the more frequently the experiment is carried out, the better the average of the consequences corresponds with the reality of the world.

Despite the remarkable progress in deep-learning based facial recognition approaches in recent years, in terms of identification performance, they still have limitations. These limitations relate to the database used in the learning stage. If the selected database does not contain enough instances, the result may be systematically affected. For example, the performance of a facial biometric system may decrease if the person to be identified was enrolled over 10 years ago. The factor to consider is that this person may experience changes in the texture of the face, particularly with the appearance of wrinkles and sagging skin. These changes may be highlighted by weight gain or loss. To counteract this problem, researchers have developed models for face aging or digital de-aging. It is used to compensate for the differences in facial characteristics, which appear over a given time period.

① Weight gain or loss can make facial changes obvious.
② Lack of cases in the selected database affects the results.
③ If the person to be identified was registered more than 10 years ago, the performance of the facial biometric system could deteriorate.
④ Models for facial aging or digital de-aging are utilized to intensify changes in facial features that occur over a specific period of time.
⑤ The drawbacks of the identification performance of deep-learning based facial recognition approaches is due to the database employed in the learning stage.

Between 1940 and 2000, Cuba ruled the world baseball scene. They won 25 of the first 28 World Cups and 3 of 5 Olympic Games. The Cubans were known for wearing uniforms covered in red from head to toe, a strong contrast to the more conservative North American style featuring grey or white pants. Not only were their athletic talents superior, the Cubans appeared even stronger from just the colour of their uniforms. A game would not even start and the opposing team would already be scared. A few years ago, Cuba altered that uniform style, modernizing it and perhaps conforming to other countries' style; interestingly, the national team has declined since that time. The country that ruled international baseball for decades has not been on top since that uniform change. _____ are important for a team; while a team brand or image can adjust to keep up with present times, if it abandons or neglects its roots, negative effects can surface.

*conservative: 보수적인

① Fans ② Outfits ③ Changes
④ Victories ⑤ Traditions

Now the path does not represent the working of any particular force; there is simply the combination of the three elementary forces mentioned; but in a real sense, there is something in the total action besides the isolated action of three forces, namely, their joint action. In the same way, when two or more human individuals are together, their mutual relationships and their arrangement into a group are things which would not be revealed if we confined our attention to each individual separately. The significance of group behavior is greatly increased in the case of human beings by the fact that some of the tendencies to action of the individual are related definitely to other persons, and could not be aroused except by other persons acting as stimuli. An individual in complete isolation would not reveal their competitive tendencies, their tendencies towards the opposite sex, their protective tendencies towards children. This shows that the traits of human nature do not fully appear until the individual is brought into relationships with other individuals.

306 윗글의 밑줄 친 (A), (B)에서 어법상 어색한 부분을 모두 찾아서 고친 후, 전체를 다시 쓰시오.

(A) _____

(B) _____

307 윗글의 밑줄 친 ⓐ의 우리말을 다음과 같이 쓸 때, 주어진 <조건>에 알맞게 빈칸 (1), (2)를 완성하시오.

<조건>
— 적절한 관계대명사와 가정법을 사용할 것
— <보기>의 단어 및 표현을 사용할 것 (필요시 변형할 것)
— (1)은 16단어, (2)는 7단어로 쓸 것

<보기>
confine / will / disclose / mutual / relationships / into a group / attention / arrangement

(1)_____
_____
_____ if (2)_____
_____
separately

308 윗글의 밑줄 친 ⓑ의 우리말을 주어진 <조건>에 알맞게 영작하시오.

<조건>
— 명사(구)를 수식하는 분사를 사용할 것
— <보기>의 단어 및 표현을 사용할 것 (필요시 변형할 것)
— 11단어로 영작할 것

<보기> arouse / except / stimuli / other persons / act

could _____ _____ _____ _____
_____ _____ _____ _____
_____ _____

309 윗글의 빈칸 ⓒ에 들어갈 말이 되도록 <보기>의 단어 및 표현을 알맞게 배열하시오.

<보기>
into / other individuals / brought /
with / is / relationships / the individual
