2026학년도 (공통영어2) 2학기 중간고사

과목코드	03	인쇄매수	290매	대상학년	1학년 1~8반	시험일	2026. 9. 28. [월]

※ [선택형 1~6] 다음 문장의 우리말 해석에 근거하여 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. [각 0.9점]

1. Washing your hands regularly helps keep infections at _____.
[손을 규칙적으로 씻는 것은 감염을 막아 두는 데 도움이 된다.]

① deck ② nest ③ bay ④ pill ⑤ tin

2. The manager noticed the conflict early and nipped it in the _____.
[관리자는 갈등을 일찍 알아차리고 커지기 전에 막았다.]

① marble ② bud ③ spear ④ pillar ⑤ rod

3. The volunteers _____ the old shelter so that the animals could stay warm.
[자원봉사자들은 동물들이 따뜻하게 지낼 수 있도록 낡은 보호소를 복구했다.]

① omitted ② banned ③ classified
④ restored ⑤ inflated

4. The farm owner had _____ the two baby bears to a tiny cage for years.
[그 농장 주인은 새끼 곰 두 마리를 수년 동안 작은 우리에 가둬 두었다.]

① conformed ② confined ③ concealed
④ conceived ⑤ concreted

5. A balanced meal _____ of grains, vegetables, and protein.
[균형 잡힌 식사는 곡물, 채소, 단백질로 이루어진다.]

① consists ② accuses ③ devotes
④ attributes ⑤ persists

6. The horses were led back to the _____ before the storm arrived.
[폭풍이 오기 전에 말들은 마구간으로 다시 옮겨졌다.]

① booth ② closet ③ deck ④ colony ⑤ stable

※ [선택형 7~11] 다음 문장의 빈칸에 들어갈 말로 문맥상 가장 적절한 것을 고르시오. [각 1.5점]

7. The two companies finally closed a _____ worth ten million dollars after months of talks.

① sermon ② handle ③ banner ④ deal ⑤ string

8. Bus drivers threatened to go on _____ unless they received higher wages.

① reform ② applause ③ insult ④ remedy ⑤ strike

9. The coach praised his polite _____ toward the referees throughout the season.

① conduct ② blueprint ③ pavement
④ exhibit ⑤ molecule

10. It is illegal to refuse someone a job because of their _____, such as the color of their skin.

① chase ② trade ③ race ④ orbit ⑤ copper

11. Spending time together every day helped the keeper build a strong _____ with the rescued elephant.

① string ② bond ③ loan ④ reception ⑤ colony

※ [선택형 12~13] 다음 문장의 밑줄 친 부분과 의미가 가장 유사한 것을 고르시오. [각 1점]

12. As winter came, the flock of birds visiting the lake began to <u>dwindle</u>.

① discriminate ② despair ③ meditate
④ diminish ⑤ soar

13. The magician's final trick <u>astonished</u> the whole audience.

① astounded ② attracted ③ insulted
④ nourished ⑤ modified

※ [선택형 14~15] 다음 문장의 밑줄 친 부분과 의미가 정반대인 것을 고르시오. [각 1점]

14. He tried to <u>conceal</u> his disappointment behind a bright smile.

① disguise ② discard ③ disclose
④ suppress ⑤ discharge

15. Instead of waiting for others to act, Mina was <u>aggressive</u> in dealing with the problem.

① hostile ② vicious ③ absurd ④ jealous ⑤ passive

뒷면에 계속

16. 다음 글의 밑줄 친 a mirror held up to the visible world가 의미하는 바로 가장 적절한 것은? [3.3점]

The ancient Greeks held that the visual artist's task was to reproduce visual experience, and their art was in this sense a mirror held up to the visible world. The approach shows in the realism of Greek sculpture and pottery. No paintings by Greek artists survive today, worn away by time and weather, so we can judge their quality only from tales such as that of Zeuxis and Parrhasios, from the evident skill of the sculpture, and from the drawings left on pottery. This definition of art as copying, however, runs into trouble. Jackson Pollock, a leader of the New York School of the 1950s, deliberately refused to copy existing objects, and he and his fellow artists consciously avoided any mark that resembled a recognizable thing. Their works copied nothing at all, yet no one denies that they are art.

① a standard that measures an artist by technical difficulty alone
② the belief that art should copy what the eye sees
③ the claim that Greek painting outlived Greek sculpture
④ an attempt to hide the artist's own intention behind realism
⑤ the idea that abstract work reveals a reality beneath appearances

17. 다음 글의 요지로 가장 적절한 것은? [3.4점]

As the leader of our school club Care for Animals, I organized a volunteer trip to an animal sanctuary for my club members. An animal sanctuary is a special place where rescued, injured, or abused animals can live in a safe and caring environment. All the club members and I agreed that the sanctuary would be the perfect place to learn about animal care. Excited for a new experience, we set out to volunteer.

① Club leaders should plan trips that are entertaining as well as educational.
② Students should take action to protect wild animals from illegal hunting.
③ Animal shelters need far more financial support from local governments.
④ A sanctuary keeps rescued animals safe and teaches volunteers real animal care.
⑤ Working with animals is the fastest way for students to choose a future career.

18. 다음 글의 제목으로 가장 적절한 것은? [2.9점]

The technical term commonly used for animals' judgement of quantity is the approximate number system. What it cannot deliver is precision. Across every species tested, it produces a characteristic pattern of errors: discrimination grows less accurate as the quantities get larger. Rhesus monkeys can tell one from two, two from three, three from four, four from five — yet they begin to fail from five upwards. Rats trained to press a lever a set number of times, from four up to twenty-four, became markedly less exact as the target rose; near the top of the range they merely produced a spread of numbers around it. When the accuracy of an animal's number sense is tested, then, the size of the numbers matters.

① Bigger Numbers, Blurrier Counting: Where Animal Number Sense Breaks Down
② Precision by Instinct: How Animals Count Without a Single Error
③ Training Rats: A New Method for Measuring Animal Memory
④ Language First: Why Only Humans Can Handle Large Numbers
⑤ One Habitat, One Rule: Number Sense Differs with Living Conditions

19. 다음 글의 주제로 가장 적절한 것은? [2.8점]

Kivetz, Urminsky, and Zheng partnered with a cafe to test the motivating power of illusory progress. Customers received a reward card that offered one free coffee after ten purchases. Half of them got a card with ten open slots, while the other half got a card with twelve open slots. The twelve-slot card, however, already carried two "bonus" stamps, so strictly speaking the two programs were identical: every customer still had to buy ten coffees to earn the free one. Yet the appeal of the free stamps was strong. Customers who believed they had been given a head start returned to the cafe more often and filled their cards faster than the others. With two of twelve slots already stamped, it felt as though they were 16 percent of the way to the goal before they had even begun, and that feeling of nearness pushed them on.

① the risk of offering free rewards to loyal customers
② why customers prefer simple reward cards to complex ones
③ how a feeling of nearness to a goal drives effort
④ the effect of price discounts on repeat purchases at cafes
⑤ how cafes design reward programs in order to cut their costs

20. 다음 글에서 전체 흐름과 관계 없는 문장은? [2.7점]

Animals kept in captivity often lose the behaviours that keep them alert in the wild. ① Keepers therefore design tasks that force the animals to search, dig, or solve small puzzles before they are fed. ② A log drilled with holes and filled with honey, for example, turns an ordinary meal into a long hunt. ③ Honey has been used as a natural sweetener in human cooking for thousands of years, and its flavour changes with the flowers growing nearby. ④ Such tasks restore the curiosity that a bare enclosure slowly erases. ⑤ Keepers report that animals given these puzzles show far fewer signs of boredom and stress.

21. 다음 도표의 내용과 일치하지 않는 것은? [2.6점]

The graph above shows how people in five countries preferred to volunteer for animal shelters in 2025. ① In Canada and Australia, more than half of the respondents chose on-site work. ② Japan was the only country in which donation was the most preferred form. ③ The share of online promotion in Brazil was higher than that in Canada. ④ In Korea and Brazil the on-site share was above 40 percent, and Brazil's figure exceeded Korea's. ⑤ Online promotion accounted for less than one fifth of the total in every country.

※ [선택형 22~23] 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것을 고르시오.

22.

Human beings have evolved to make the most of the resources available to them in ways that are subtle and complicated. When we alter our diets, especially when we do so abruptly, we are in effect running vast experiments in nutrition. We ought to have more ① humility. Nutritional science is still young, and there is a great deal we do not know. If we have eaten certain foods in certain ways for millennia, we should ② assume, until it is proven otherwise, that there is probably a good reason why. Traditional foods that do not fit neatly on the contemporary dietary plate should generally be chosen over highly ③ processed ones that do. We should suppose that traditionally made fatty blood sausages are ④ preferable to lean, factory-made salamis, and that spoonfuls of honey are superior to sprinkles of sweeteners. Witnessing how poorly traditional societies fare as they undergo a nutrition transition should make those who have already completed it ⑤ ignore whether their own diets have moved too far. [3점]

23.

As children, the principle of opposites is foreign. Children perceive words and their meanings ① separately from each other. It is only in later development that we grasp how individual words ② divide directly from one another. For many children, for instance, it is not ③ clear that 'Right' is the opposite of 'Left'. A vivid example appears when children learn to ride a bicycle. If parents tell their child "Don't go to the left," they often find that the child keeps riding straight ahead and does not automatically ④ turn to the right. When we were children and were told "No, don't eat with your hands," we were confused about what our parents expected. Only later did we recognize the link and understand that we should keep eating, but with a fork or a spoon ⑤ instead of our hands. [3.2점]

뒷면에 계속

※ [선택형 24~27] 다음 글의 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

24.

Humans are not the most social animal. Ants, bees, and termites put humanity to shame on many measures of sociality. A wide variety of relatives live together in perfectly harmonious order and collectively care for their young. But while insect colonies are impressively social places, theirs is not our kind of social life. Bees always build hexagonal hives, ants march in lines, and termites move in zigzag formations. These patterns recur predictably because they are tightly programmed genetically and propelled pheromonally. We humans are freer and far less tightly programmed, so our social patterns can _____. Every group dances a slightly different dance, and these choreographies change across generations. [3점]

① vary from group to group and shift across generations
② be predicted from the size of the group alone
③ remain as fixed as the routes that ants follow
④ replace the need for cooperation altogether
⑤ be inherited without any learning at all

25.

Those who purchase the goods of a company are called customers. Individuals who purchase goods for personal use are called consumers: beings who consume. Companies have therefore invented multiple ways of ensuring that their customers consume the produced items in larger quantities and more frequently. Those who sell food have an easy time, for food is literally consumed, so there is always a need to buy more. With more durable things, however, companies must invent reasons for their customers to keep consuming. One approach is to _____ by persuading them that it is no longer fashionable. The entire fashion industry is built to convince people that fashion matters, so they must buy new clothing even though the old is still perfectly functional. [3.1점]

① lower the price of every new model on the shelf
② extend the warranty offered on older products
③ remind buyers how well the old item still works
④ make what people already own feel out of date
⑤ limit the number of items each customer may buy

26.

What is the Capabilities Approach (CA), and why would lawyers passionate about animal justice care about it? It is easy to say what it is not. The CA does not rank animals by likeness to humans, nor does it seek special privileges for those judged most "like us," as some other popular approaches do. The CA has concern for the finch and the pig as much as for the whale and the elephant. It argues that the human form of life is simply irrelevant when we think about what each type of animal needs and deserves. What is relevant is their own forms of life. Just as humans seek the characteristic goods of a human life, so a finch seeks a finch's life and the whale a whale's life. We should extend ourselves and learn, rather than lazily picture animals as lesser humans. According to the CA, each sentient creature should have the opportunity to flourish in _____. [3.2점]

① the environment that human experts have judged safest
② the form of life characteristic of its own kind
③ a social role modelled on the human family
④ the habitat where the largest species gather
⑤ a legal system designed by animal lawyers

27.

Social media serves as an important context for autobiographical remembering. Personal events posted on social media platforms are better remembered and less often forgotten than events that are not posted, regardless of the characteristics of the events themselves. This may be because sharing memories online allows people to rehearse and make sense of what happened, which supports long-term retention. Online feedback such as comments and likes, together with technological features such as algorithms and periodic reminders, can further serve as memory cues for the details of a posted event. As a result, event details shared on social media are likely to be stabilized and recalled over time, whereas _____. [3.1점]

① the platforms delete the records after a fixed period
② users gradually lose interest in their old photographs
③ feedback from others distorts what really happened
④ posting soon becomes a burden rather than a pleasure
⑤ details that were never shared may slip beyond reach

※ [선택형 28~29] 다음 글을 읽고, 물음에 답하시오.

(A)

July 29, Monday

Our club arrived at the Free Animals sanctuary. Jane, the staff member in charge of animal care, welcomed us with a big smile and ⓐgiving us a tour of the facility.

(B)

After the cleaning, we helped prepare the food by cutting up fruits and vegetables and dividing them into several large baskets. For old elephants with weak teeth, we chopped bananas instead of the sugarcane that they usually ⓑeats.

(C)

It was amazing to see bears and elephants ⓒmoving freely in a large field. Our tasks for the day included cleaning the shelter and preparing food for the animals.

(D)

While cleaning the habitats, we checked ⓓwhether there were any hazards that could harm the animals.

Spending the whole day helping out with the animals ⓔwas an incredible experience for me. It was a rewarding experience, and I was impressed with the attention the staff members gave to all the animals.

28. 주어진 글 (A)에 이어질 내용을 순서에 맞게 배열한 것으로 가장 적절한 것은? [2.8점]

① (B) - (D) - (C) ② (C) - (B) - (D) ③ (C) - (D) - (B)
④ (D) - (B) - (C) ⑤ (D) - (C) - (B)

29. 윗글의 내용과 일치하지 않는 것은? [2.5점]

① 봉사단은 서식지를 청소하며 위험 요소가 있는지 확인했고, 이가 약한 코끼리에게는 평소 먹던 사탕수수를 잘게 썰어 주었다.
② Jane은 동물 돌봄을 담당하는 직원으로, 봉사단에게 시설을 안내해 주었다.
③ 곰과 코끼리가 넓은 들판에서 자유롭게 움직이고 있었다.
④ 봉사단은 과일과 채소를 잘라 여러 개의 큰 바구니에 나누어 담았다.
⑤ 글쓴이는 직원들이 모든 동물에게 기울이는 관심에 깊은 인상을 받았다.

※ [선택형 30~31] 다음 글을 읽고, 물음에 답하시오.

Creativity is the ability to generate novel and valuable ideas. It involves divergent thinking, imagination, and a willingness to experiment and take risks. While AI can be a powerful tool for creative efforts, it also carries the risk of (a)limiting originality and innovation. AI algorithms are trained on existing datasets, often identifying patterns and trends in past creations. While this can be useful for generating new content in similar styles or formats, it can also lead to derivative works (b)that lack genuine originality. If artists and designers rely too heavily on AI for inspiration, they may find themselves trapped in a cycle of imitation, unable to break free from the constraints (c)which the AI itself operates. Moreover, the ease with which AI can generate content can discourage the kind of struggle and experimentation that often leads to breakthroughs. The creative process is often messy and repetitive, involving numerous failures and setbacks. It is through these challenges that we refine our skills, develop our unique perspectives, and (d)push the boundaries of what is possible. If AI provides instant solutions, it can bypass this essential process of learning through trial and error, ultimately (e)inhibits the development of true creative talent.

30. 윗글의 밑줄 친 부분 중, 어법상 틀린 것을 두 개 고르면? [3.6점]

① (a) ② (b) ③ (c) ④ (d) ⑤ (e)

31. 윗글의 내용을 바탕으로 다음 문장을 완성할 때, 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? [2.9점]

AI can speed up creative work, but heavy reliance on it may leave artists caught in (A)_____, because the messy trial and error that builds real skill is (B)_____.

① imitation — rewarded
② originality — bypassed
③ imitation — demanded
④ imitation — skipped
⑤ originality — refined

【서답형 1.】 다음 우리말과 일치하도록 빈칸에 알맞은 단어를 첫 글자로 시작하여 쓰시오. (어형 변화 가능함 / 부분점수 없음) [각 1점, 총 4점]

1. The staff explained the whole rescue p_____ to the volunteers.
   (직원은 자원봉사자들에게 구조 절차 전체를 설명해 주었다.)
2. The baskets held s_____ fruit for every animal in the shelter.
   (바구니에는 보호소의 모든 동물에게 충분한 과일이 담겨 있었다.)
3. The old elephant r_____ being moved to a smaller field.
   (그 늙은 코끼리는 더 좁은 들판으로 옮겨지는 것에 분개했다.)
4. A careful a_____ of each animal's health is made every month.
   (각 동물의 건강에 대한 세심한 평가가 매달 이루어진다.)

【서답형 2.】 <보기>의 단어를 모두 한 번씩 사용하여 빈칸을 채우시오. (필요하면 어형을 바꿀 것 / 부분점수 없음) [각 1점, 총 4점]

<보기>
accumulate · detect · fatal · overlook

1. Signs of stress are easily _____ in animals that stay quiet all day.
2. Waste _____ in the pond for weeks before the keepers cleaned it.
3. An infection can be _____ to a rescued animal if it is not treated early.
4. The new sensors _____ even a small change in the animal's temperature.

【서답형 3.】 위 [선택형 28~29] 글의 밑줄 친 ⓐ~ⓔ 중 어법상 틀린 것 2개를 찾아 기호를 쓰고, 바르게 고쳐 쓰시오. (기호 각 1점, 바르게 고친 것 각 2점) [총 6점]

기호	바르게 고친 표현

【서답형 4.】 다음 우리말과 같은 뜻이 되도록 <보기>의 단어를 모두 한 번씩 사용하여 문장을 완성하시오. (필요하면 어형을 바꿀 것 /「with + 목적어 + 분사」 구문을 사용할 것) [3점]

우리는 벌들이 주위에서 윙윙거리는 가운데 꿀 통나무 먹이통을 나무에 매달았다.

We _____.

<보기>
around · bees · buzzing · feeders · hang · honey-log · on · the · trees · with

【서답형 5.】 다음 우리말과 같은 뜻이 되도록 <보기>의 단어를 모두 한 번씩 사용하여 문장을 완성하시오. (필요하면 어형을 바꿀 것 / 가주어 It을 사용하고, 우리말의 시제를 그대로 살릴 것) [4점]

높은 기온이 도시의 수원(水源)을 말려 버리기 때문에 이런 유형의 사고가 매년 일어난다는 것은 충격적이었다.

It _____ in the city.

<보기>
accident · be · dry · every · happen · high · of · shocking · since · sources · temperatures · that · the · this · type · up · water · year

【서답형 6.】 (A)를 읽고, (B)의 빈칸 ⓐ~ⓒ에 들어갈 말을 (A)에서 정확히 찾아 각각 한 단어의 영어로 쓰시오. (어형 변화 가능함) [각 2점, 총 6점]

(A) To harness the full potential of units of measurement, we need some degree of consistency. Subjective measures contain useful knowledge, but this knowledge is hard to share, based as it is on one person's experience. The historian of science Theodore M. Porter describes measurement as a 'technology of distance': a tool that uses shared rules to bridge differences of culture and geography, allowing information to be exchanged. Following this logic, if measurement is another sort of language, then, just as with words, individual units need reliable definitions in order to communicate. In the earliest societies these definitions might need to be shared no more widely than a single settlement, so a definition could be as simple as knowing that a unit was equal to a certain body part. As these communities grew, though, the inadequacies of such a system became evident. Imagine a disagreement over trade or tribute: it is a moment of conflict that demands greater consistency in measurement.

(B)

Q. Why do units of measurement need definitions that everyone accepts?

A. Because a measure works as a technology of ⓐ _____, a tool that bridges gaps of culture and geography. A single settlement could define a unit by a familiar ⓑ _____ part, but once communities grew, disputes over trade demanded far greater ⓒ_____.

【서답형 7.】 (A)를 읽고, (B)의 빈칸 ⓐ, ⓑ에 들어갈 말을 (A)에서 정확히 찾아 각각 한 단어의 영어로 쓰시오. (어형 변화 가능함) [각 2점, 총 4점]

(A) Urban regeneration projects in degraded areas have recently been promoted as ways of improving residents' wellbeing and solving problems of environmental injustice. Yet such environmental improvements in ethnic communities and low-income households can create an urban green space paradox. New, high-quality green spaces raise the status of a district and make these neighbourhoods far more desirable. The cost of housing rises with that status, and residents may no longer be able to afford the rent. The result is the exclusion or displacement of the very residents who were intended to benefit from the ecosystem services that the new green space provides. In turn, those residents may only be able to afford a neighbourhood as degraded as the one they left, with little access to green infrastructure.

(B)

A new park makes a neighbourhood more ⓐ_____, yet rents climb along with that appeal. The residents the project was meant to help are therefore ⓑ_____ to districts that once again lack green infrastructure.

【서답형 8.】 (A)를 읽고, (B)의 요약문 빈칸 ⓐ~ⓓ에 들어갈 말을 <보기>에서 골라 각각 번호를 쓰시오. (부분점수 없음) [4점]

(A) If our bodies know best, why are they so easily injured when we do something as seemingly natural as running? On the one hand running looks very easy, but that is only because our bodies are so very good at it. The most powerful supercomputer on the planet cannot administer the enormous number of computations it takes to run, untethered, on two legs. Wherever our running intelligence is stored, running is not fully conscious to us, and it is so complicated that only the T-1000 Terminators of our imagination are able to manage it. Because our running knowledge is buried so deeply within muscle fibres, cells and our DNA, we have to accept that we cannot fully explain its complexities. That does not mean our bodies do not know how to do it. We may feel our way towards understanding the alchemy of running by learning how to use our senses, getting them firing, seeing what they are capable of, and accepting that our bodies know more about running than we ever will.

(B)

Running feels ⓐ _____ only because the body carries out an enormous number of ⓑ_____ that no supercomputer can match. Since this knowledge is buried in muscle fibres, cells and DNA, we cannot fully ⓒ _____ it; the wiser course is to sharpen our ⓓ _____ and to trust what the body already knows.

<보기>

① calculations ② senses ③ effortless ④ explain
⑤ exhausting ⑥ instructions ⑦ ignore ⑧ muscles
