교과서SL 본문1

(A) <Finding What Defines Us>

(B) The formation of our identity begins from the moment we are born.

(C) It defines us and our existence.

(D) These interactions may take place with individuals-such as family members, friends, and teachers-or in formal or informal groups.

(E) Our Identity is our sense of who we are.

(F) Cultural identity is a major component of our identity, as it teaches us about ourselves and gives us a sense of belonging.

(G) However, it is developed further every time we interact socially.

교과서SL 본문2

(A) A unique food-related word is sometimes an identifier of a certain culture. Take Korea as an example. Korean culture is becoming increasingly popular around the world.

(B) It is a mixture of Mexican recipes and common American ingredients. Despite its adaptability, food is a stable source of cultural identity for people.

(C) Some kinds of food are also often accompanied by specific cultural practices, such as using chopsticks.

(D) And when it does, it can develop into something new.

(E) This is because food allows them to distinguish themselves from other cultural groups. All aspects of food-including the way it is prepared, cooked, served, and consumed-are part of cultural identity.

(F) Food can be important to our sense of cultural identity because many kinds of food are closely tied to particular cultures.

(G) One example is Mexican food in America.

(H) More and more people are trying Korean food and enjoying its healthy ingredients and unique flavors. As a result, non-Koreans are becoming familiar with Korean words related to food.

(I) Some of these terms have even been added to the Oxford English Dictionary. In fact, 9 of the 26 newly listed Korean words in the dictionary are related to food, including banchan, galbi, samgyeopsal, and mukbang.

(J) Still, food can easily travel across cultures.

교과서SL 본문3

(A) Everywhere I look, I see familiar labels on items such as my favorite ramyeon or the tteok for making tteokguk, which Koreans eat on New Year's Day. The dumpling skins in the freezers bring back memories of my mother.

(B) Similarly, immigrants who try to adapt to a new culture may experience the same confusion.

(C) A multicultural identity also forms when parents adopt children from a different culture.

(D) You might be able to understand the meaning of cultural confusion by reading the following passage written by a Korean American writer.

(E) I remember when my mother and I used to fill the skins with ingredients. The sight of the banchan refrigerators reminds me of the taste of my mother's lovingly made side dishes.

(F) These children may struggle to fit in with a certain cultural group.

(G) Since the day my mother died, I haven't been able to enter an Asian grocery store without crying. The shop is like a little piece of Korea.

(H) In the modern world, people from different cultural groups often mix with one another.

(I) Children whose parents are from two different cultural backgrounds have a multicultural identity.

(J) With my mother gone, I ask myself, "Am I still Korean? How can I be Korean if I have no one to ask which kind of rice we used to buy anymore?"

교과서SL 본문4

(A) They can fill the gap between cultures and easily adapt to cross-cultural situations.

(B) However, there are some advantages to having a multicultural identity.

(C) For example, a Korean American may feel attached to their Korean cultural identity when playing yunnori on Chuseok, a Korean holiday similar to Thanksgiving.

(D) Like the woman in this story, people with a multicultural identity sometimes have problems defining themselves.

(E) People with a multicultural identity naturally gain the ability to recognize cultural differences.

(F) However, they will feel attached to their American cultural identity when they watch a parade on Thanksgiving Day.

교과서SL 본문5

(A) In this way, food can be a way to maintain a link to the cultures that they come from.

(B) People with a multicultural identity, for example, may feel that their favorite dishes help them define who they are.

(C) Food can be a powerful connection to our cultural identity because it involves cultural traditions that get passed down from one person to another.

(D) Our cultural identity helps us to understand ourselves and our place in the world.

올포 1강 분석

(A) While it feels scary to move away from our current location, we're confident that this move will allow us to enhance our service to you.

(B) We're so excited to announce we'll be moving to a new spot on 50th Street.

(C) Warm regards, Becky Bloom

(D) While we've loved our time on 125th Street, our business has changed a lot in the last few years and we realized we wanted a location with more baking space that would better serve the community we live in.

(E) Dear Bloom Cookie customers,

(F) Thank you for your continued support, and we look forward to welcoming you to our new home!

(G) With our lease coming to an end, we've finally made the decision.

(H) We will continue to offer the same delicious cookies and coffee at our new location.

올포 1강 본문1

(A) The songs have been promptly removed from the game and related videos, and we promise to make sure this doesn't happen again.

(B) We extend our deepest apologies for this matter and sincerely regret any harm or disappointment this may have caused to the original composers and all of you who play our game.

(C) We understand the importance of respecting intellectual property rights and taking immediate steps to address this issue.

(D) Thank you for your patience and continued support.

(E) Dear valued players,

(F) Sincerely, Silver Lining Studio

(G) Once again, we extend our sincerest apologies for this matter.

(H) Recently, we at Silver Lining Studio discovered that two songs in our "Behind the Frame" game soundtrack might have been used without permission from their creators, thus violating the rights of others' works.

올포 1강 본문2

(A) We sincerely hope you've enjoyed exploring its features during your trial period.

(B) We want to express our heartfelt gratitude for choosing the JoyfulPiano app and for starting this musical journey with us.

(C) As your free trial period draws to a close, we want to ensure you have all the necessary details before it concludes.

(D) We're here to support you every step of the way.

(E) We trust this message finds you in good spirits!

(F) Thank you once again for choosing JoyfulPiano. Sincerely, Rachel Garcia Customer Support Manager

(G) Should you have any questions or require further assistance, please don't hesitate to reach out to us at www.joyfulpianoapp.com.

(H) Dear Mr. Lewis,

(I) Your free access to JoyfulPiano will expire in just five days.

(J) Following this, access to our app will be limited unless you choose to subscribe to one of our premium plans.

올포 1강 본문3

(A) Dear Valued Customer,

(B) We are truly grateful for your purchase and overwhelmed by the popularity of our latest collection.

(C) However, we also deeply regret any disappointment you may feel due to the color difference between the clothes displayed on our website (dark red) and the actual product (bright scarlet).

(D) Your satisfaction is our priority, and we are committed to making things right.

(E) We understand the disappointment this may have caused upon delivery.

(F) We at May Summer Online Clothing Store thank you for choosing our new fall sweater.

(G) We sincerely apologize for any inconvenience this has caused and assure you that we are taking steps to ensure accurate representation of our products in the future.

(H) Please provide your address and preferred pick-up date on our website, and we will promptly arrange for the return of the item and process your refund accordingly.

올포 2강 분석

(A) "No worries, Fiona. I took care of the phone calls and messages, and I even told everyone to think twice before putting any paper on your desk," Chandra said.

(B) Surprised, Fiona stared blankly at Chandra.

(C) "And I bought throat spray and cough drops for you." Fiona wanted to say thanks, but her sore throat held her back.

(D) However, Chandra knew exactly what she wanted to say. "No problem, Fiona. I've got your back."

(E) Just thinking about it made her headache even worse.

(F) Chandra said as she passed Fiona the brown bag she was carrying.

(G) Fiona woke up with the worst cough, a sore throat, and a headache.

(H) Then, the doorbell rang. It was Chandra, her colleague.

(I) "Here's some chicken noodle soup,"

(J) She had to take time off from work, but she knew that taking off today would mean facing a ton of paperwork on her desk tomorrow.

올포 2강 본문1

(A) "He must be here for one of the puppies!"

(B) When my eyes met his eyes, he simply grinned and I did the same.

(C) My family lived in a very small town, and my best and only friends were our dog, Blackie, and her two newborn puppies.

(D) When I saw Mr. Grear talking to my father in front of our house, my heart sank.

(E) I just stood there and I tried to understand what he said.

(F) Mr. Grear frowned in perplexity.

(G) My father continued, "I'm saying there isn't any price on him because he belongs to my son. We are keeping both of them."

(H) I dashed toward the house to stop my father, but I overheard him saying, "You don't quite catch my meaning, Mr. Grear. I'm not asking for a higher price for this puppy."

(I) My father had mentioned that we couldn't afford to keep them all and should find them new homes.

올포 2강 본문2

(A) With each step, Sarah's initial fear melted away, revealing an unstoppable desire to uncover the secrets hidden within the walls of this old house.

(B) As she stepped inside and felt the warmth of sunlight filtering through the dusty windows, a sense of wonder and interest washed over her.

(C) Sarah approached the old, falling-apart house.

(D) Sarah took a deep breath, paused for a moment, then gathered her courage to push open the squeaky door and enter the mysterious house.

(E) Her heart was pounding in her chest as she imagined all the horrors that could be hiding in its dark hallways.

(F) The squeaky floors under her feet didn't seem to whisper tales of ghosts; instead, they sang a song of history and forgotten memories.

올포 2강 본문3

(A) Everyone in and around the neighborhood knew the Jensen family, and was pleased to have been invited.

(B) When everyone had arrived, they gathered in the kitchen for the taffy making.

(C) Katie and Dolly were perfect hosts welcoming each guest.

(D) Katie mixed all the ingredients for the taffy candy, while the young men carried in wood for the old cook stove.

(E) There was a glass of cold water for testing the doneness of the candy.

(F) The wagons full of young friends started arriving.

(G) When the candy finally formed the perfect ball, cheers of excitement and joy echoed through the kitchen.

(H) If the candy formed a soft ball when dropped in the glass of water, it was time to take it out of the frying pans and start beating it with a wooden spoon.

(I) She placed the ingredients in the huge iron frying pans, and soon the delicious smell of candy floated throughout the house.

올포 3강 분석

(A) In this regard, we need to consider other people's cultural differences when treating them.

(B) The concept of justice is not the law in the narrow sense.

(C) Justice is not about treating all patients the same because it is not possible to justifiably treat all patients the same, since all patients are different and present with different ailments or complaints.

(D) Therefore, fairness and justice in this respect involves respecting and recognising their differences, not acting in a way that disadvantages the patient.

(E) To apply this principle, we need to accept and value differences and diversity in our patients.

(F) Patients come from different cultural, racial and religious backgrounds.

(G) Rather, this principle involves ensuring that everyone benefits from treatment, as well as the distribution of access to it.

(H) Importantly, justice is about advocating on behalf of all patients, whether they come in with a Western philosophical perspective or another philosophical perspective.

올포 3강 본문1

(A) Skilled workers are increasingly footloose, able to settle just about anywhere there is broadband Internet access, and they are drawn to healthy. aesthetically pleasing environments.

(B) A quality environment produces jobs; a polluted environment costs jobs.

(C) America's manufacturing-based economy of the twentieth century has been transformed into a service-based knowledge economy.

(D) Quite simply, city leaders are recognizing that a cleaner environment is needed both to provide residents with a good quality of life and to compete in the global economy.

(E) Why have cities only recently seen a sudden increase in "greening" — from green roofs to new parks to tree planting to more energy efficient buses — despite the fact that sweeping federal environmental legislation was enacted more than 30 years ago?

(F) Moreover, green cities are demonstrating that the alleged trade-off between jobs and the environment is a false dichotomy.

(G) For the information age economy, environmental quality is a major economic asset.

올포 3강 본문2

(A) For example, if you're using a memo to take a telephone message, make sure you include who called and when, what their message was, and how to call them back.

(B) The brevity of memos can be wonderful, but you do need to make sure you communicate everything, or you'll just end up creating more work for yourself.

(C) As you can see, it's very important not to sacrifice the content of your memo simply because memos are normally brief.

(D) If you can't fit all of the information you need into a memo, opt instead to write a letter or an e-mail.

(E) It's better to include all of the information you need to transmit than it is to omit critical details simply for the sake of making your message short.

(F) If you forget any of these details, your memo will be practically pointless.

올포 3강 본문3

(A) It is relatively uncontroversial that there are small structural and functional differences between male and female brains, perhaps contributing to some performance differences on tests of spatial and verbal abilities.

(B) "Fundamentally, the brains of men and women are more similar than different."

(C) Even those scientists who have discovered functional performance differences between the brains of males and females are careful to point out that their research is tentative and suggestive, and that while their research attends to differences, similarities abound:

(D) Of paramount importance, but usually overlooked, is that similarities between the sexes far outweigh differences: differences between men and women are not as large as differences among members of the same sex.

올포 4강 분석

(A) Malkiel popularized the idea that the movement of any individual stock in the market is essentially random — it's impossible to know why a stock is doing what it's doing.

(B) Which is why we shouldn't be too surprised that a cat is just as likely to make a killing on Wall Street as a day trader.

(C) "People find it hard to accept the notion of randomness."

(D) People who reliably make money from the market are those who own a diverse portfolio of different kinds of investments, which spreads out the risk, with the broader principle that the market, over the long haul, will eventually increase in value.

(E) "Human nature likes order," wrote the economist Burton Malkiel in his seminal book A Random Walk Down Wall Street.

(F) Picking individual stocks, or betting on certain trends, is much closer to gambling than science.

올포 4강 본문1

(A) In the complex story of nature's ways, people exploring the wild's twisting paths often discover themselves caught in dangerous situations.

(B) Yet amid these serious situations, a remarkable turn of events occurs, like unexpected notes in a familiar song.

(C) In Oregon's forests in 1995, a man was found dead, initially blamed on a cougar, but subsequent investigation revealed otherwise.

(D) Bears, cougars, and other wild animals sometimes remind us of their formidable presence.

(E) Similarly, in 2015, a comparable incident occurred, with initial suspicions falling on a nearby wolf pack.

(F) Despite the infrequency, there are a considerable number of accumulated instances where these guardians of the wilderness become aggressors, resulting in tragic outcomes for unsuspecting explorers.

(G) However, upon closer investigation, it became apparent that the wolves were innocent bystanders in the man's tragic fate, emphasizing the complexity inherent in such wilderness tragedies.

올포 4강 본문2

(A) Clients like competitions, since they provide an opportunity to choose between several designs — and several architects — while fund-raisers use competitions as a way to raise public interest in a building project.

(B) In later life, I. M. Pei refused to enter competitions, since he considered that the best architecture could emerge only from a considered dialogue between architect and client.

(C) Everyone loves a horse race — except, perhaps, the horses.

(D) More important, competitions oblige the architect to work in a vacuum.

(E) Architects are ambivalent about competitions.

(F) On a practical level, competitions are extremely expensive: entering a large competition can cost millions of dollars.

(G) Nevertheless, the public favors competitions, since they provide an opportunity for young talent to be recognized in a field that tends to privilege age and experience.

올포 4강 본문3

(A) Different individual cards won or lost different sums of money.

(B) But the cards were not random.

(C) Measurements of the electrical conductance of their skin, which can reveal levels of anxiety and nervousness, indicated that their emotions were subtly warning them against the bad decks after just ten turns.

(D) In an experiment conducted by Antoine Bechara, participants were given $2,000 in play money and four decks of cards and were told that they were to use them in a game.

(E) Their unconscious mind had worked out what was happening far quicker than their conscious minds and had warned them with a hit of bad feeling.

(F) But when their behaviour was analysed, Bechara discovered something remarkable.

(G) They should just go ahead and turn the cards and try to win as much money as they could.

(H) In fact, some of the piles were far more profitable than others.

(I) They knew before they knew.

(J) On average, it took the gamblers around fifty card-turns before they began to report a conscious 'hunch' that some of the decks were more profitable.

올포 5강 분석

(A) As a result of this access to forms of knowledge beyond the understanding of the general public, more authority and power was granted to the medical profession, and the nature of the doctor/patient relationship changed.

(B) Once the source of a disease was identified, patients expected that doctors should be able to cure them.

(C) As the practice of medicine shifted from cure to prevention, doctors were now expected to provide results based on scientific evidence.

(D) The introduction of scientific methods into medical practice transformed the profession as well as its object.

(E) Additionally, those doctors with scientific training were now distinguished from a range of alternative healers, from homeopaths to midwives, resulting in an elevation in the eyes of the public of the status of the profession as compared with other healing practices, which persists today.

(F) Until the late nineteenth century, doctors were not required to have studied medicine and were relied on mainly to provide comfort and guidance to their patients.

올포 5강 본문1

(A) The sea beautifully reflects the light of the moon and the stars, and for millions of years, a simple algorithm of "head toward the light at night" allowed the turtles to effectively head toward the sea to pursue an effective life strategy.

(B) It turns out that the way the young turtles knew to head toward the direction of the ocean was based on light glimmering off the sea at night.

(C) For millions of years, sea turtles would come to the beaches of Florida to spawn and their hatchlings would head toward the sea — to live a life far away — and to return to Florida years later.

(D) Miami and the other big cities on the coast of Florida are filled with lots of bright lights at night, so this led to an ecological disaster for the sea turtles.

(E) Well, then came Miami.

(F) Shaped by evolution to head toward light at night, hatchlings started toward the highways and cities by the millions — meeting premature death instead of a long sea-dwelling life.

올포 5강 본문2

(A) Henry Ford was the son of an Irish immigrant.

(B) A report by the Center for American Entrepreneurship found that, in 2017, out of the largest five hundred US companies by revenue, 43 percent were founded or co-founded by immigrants or the children of immigrants.

(C) Moreover, immigrant-founded firms account for 52 percent of the top twenty-five firms, 57 percent of the top thirty-five firms, and nine of the top thirteen most valuable brands.

(D) Those who migrate out of poor countries today need to have the money to afford the cost of travel and have the grit (or the advanced degrees) required to overcome a system of immigration control typically loaded against them.

(E) For this reason, a lot of them bring exceptional talents — skills, ambition, patience, and stamina — that help them become job creators, or raise children who will be job creators.

(F) Sergey Brin was born in Russia.

(G) Steve Jobs's biological father was from Syria.

올포 5강 본문3

(A) It is the stuff that is no longer useful, that we no longer wish to have in our homes or personal spaces, that we want to throw away.

(B) Perhaps precisely due to the proliferation of trash in material space, it has arguably also become a resource — something that has value and can be sold on at a profit.

(C) Taking the discarded objects of others as found materials, many artists work with trash in order to create new aesthetic objects while at the same time making a commentary on the place of trash in the social and cultural world.

(D) Traditionally, garbage is considered the detritus of consumer and industrial practices.

(E) Artists — most often at the leading edge of rethinking materiality, value, and beauty — are among the first social actors to have taken seriously the possibility of reusing trash to make new things.

올포 5강 논술형

(A) We have eaten at your restaurant several times in the past, but this is the first time we have received such bad service.

(B) I am writing to complain about a meal we had at your restaurant yesterday.

(C) Among the 12 dishes on the menu, only four were available, and the ones we ordered were not prepared well.

(D) I hope this letter finds you well.

(E) We had booked a table for six, but when we arrived there were no free tables and we had to wait for more than 45 minutes to sit down.

(F) I am not requesting a refund, but I would appreciate if you could address these issues and improve the quality of your dishes and service.

(G) In particular, the fish did not taste fresh, and the waiter was even rude when we told him about this.

(H) Dear Manager,

(I) Yours faithfully, Sarah Thompson

올포 5강 서술형

(A) Another study concluded that mind wandering was more likely when subjects were bored, anxious, tired, or stressed.

(B) If you could tape-record your thoughts, you would find an endless flow of ideas that zigzag in all directions.

(C) Almost half (47%) of the times they were asked to report, the participants said their mind was wandering.

(D) Rarely does consciousness come to a standstill.

(E) Recognizing that consciousness fluctuates continuously, William James long ago named this flow the stream of consciousness.

(F) It moves, it flows, it fluctuates, it wanders.

(G) The contents of your consciousness are continually changing.

(H) Even when you sleep, your consciousness moves through a series of transitions.

(I) For example, in one study, 2,250 adults were contacted randomly during waking hours and asked whether their mind was wandering from their current activity.

올포 7강 분석

(A) Beyond its sporting aspect, Cuju holds cultural significance in China, often included in celebratory occasions and events, highlighting its deep-rooted history in the country's heritage.

(B) In Cuju, players aimed to kick the ball through a central hoop without letting it touch the ground, all while following the rule of not using their hands.

(C) It was recognized by FIFA as one of the earliest foot-based sports.

(D) Traditionally, the ball was crafted from leather, and matches took place on fields with two teams of equal size.

(E) However, Cuju's influence on modern football was not direct.

(F) Cuju, an ancient Chinese ball game, holds a significant place in sporting history.

(G) Players wore light and flexible clothes to move easily during the game.

올포 7강 본문1

(A) One of his paintings can be seen at the Octavia Fellin Public Library in Gallup.

(B) He died in New York City in 1952.

(C) He became a landscape painter, it is said, because he was then too poor to pay for models.

(D) He then went West and sketched desert and mountain scenes in Arizona and New Mexico.

(E) He painted landscapes in the vicinity of New York until about 1904.

(F) Born in New York City, Albert Lorey Groll was an etcher and also a landscape painter specializing in Western scenes.

(G) He was elected to the National Academy of Design in 1910.

(H) The resulting painting "Arizona" won a gold medal at the Penn Academy of Fine Art (PAFA) in 1906.

(I) In 1899, he studied at the Royal Academy in Munich under N. Gysis and Loefftz as well as in London.

(J) Groll was the rare painter in northern New Mexico before World War I, choosing "bare mesas and towering cloud formations" rather than mountains.

올포 7강 본문2

(A) Hibiscus mutabilis, also known as the cotton rose, is a plant cultivated for its showy flowers.

(B) The plant grows rapidly, and its flowers are 4-6 inch in diameter, blooming late summer right through autumn.

(C) Temperature is thought as an important factor affecting the rate of colour change as white flowers kept in the refrigerator remain white until they are taken out to warm, whereupon they slowly turn pink.

(D) Originally native to southern China, it is now found in all continents except Antarctica.

(E) This plant is best grown in well-drained soils and is quite drought tolerant.

(F) The species name mutabilis means 'change' in Latin, referring to the changing color of the flowers from white in the morning through light pink during noon to a deep rosy red colour all in one day.

올포 7강 본문3

(A) His first important negotiating job came during the 1948 war between the Arabs and Israelis.

(B) Fortunately, a women's club in the area raised the money to help him pay for tuition.

(C) Ralph J. Bunche was born on August 7, 1904, into a poor household.

(D) After his parents died, Bunche's grandmother moved the family to Los Angeles, California.

(E) The only African American in his class, he earned the highest grades and graduated from his high school with honors, and was easily admitted to UCLA.

(F) Much to his and the world's relief, a peace treaty was finally signed.

(G) Ralph Bunche was the first African American to win this honor.

(H) In 1950, he was awarded the Nobel peace prize.

(I) During World War II, Bunche was asked to work for the State Department, and he helped to found the United Nations.

(J) Although he graduated with honors, a lack of money stood in the way of his dreams of attending Harvard Law School.

올포 7강 서술형

(A) Her impressive achievements helped advance women's sports, and she defied conventional expectations about combining family life with an athletic career.

(B) Fanny Blankers-Koen, a Dutch mother of two, made history at the 1948 Olympics.

(C) After the war, she returned to competition, winning more titles and setting a world record in the pentathlon in 1951.

(D) She won four gold medals in track and field although she was not allowed to compete in more than three individual events.

(E) In recognition of her remarkable career, she was named the woman athlete of the twentieth century by the IAAF in 1999.

(F) She held over 20 world records but had her career interrupted by World War II.

올포 7강 논술형

(A) In fact, Sweden's growth rate has exceeded the US growth rate since 2000.

(B) This is not to argue that Sweden closed the gap between its growth rate and the US growth rate because of its carbon tax.

(C) Prior to enacting the tax, Sweden's economy grew between 1961 and 1990 at an annual rate of 2.9 percent while the US economy grew at 3.7 percent.

(D) Has Sweden been severely harmed by its carbon tax? Hardly.

(E) The gap between the Swedish and US growth rates fell after the tax was enacted.

(F) Sweden's GDP grew between 1991 and 2015 at an average annual rate of 2.1 percent, just a bit lower than the US growth rate of 2.4 percent.

(G) A 2016 report by the Heritage Foundation that analyzed a carbon tax in the United States at one-third the rate paid by Swedish industrial firms argued that the tax would have "disastrous economic costs."

(H) But it is hard to argue that the country has suffered a great deal due to its carbon tax.

올포 8강 분석

(A) Proportional voting systems provide a democratic vent for populist anger and discontent, creating clear incentives for mainstream parties to address underlying social problems and to win back votes.

(B) But it would be wrong to rig our political system to exclude them just because we disagree with their views.

(C) Critics sometimes worry that by making it easier for small parties to win seats, proportional representation will encourage the growth of extremist groups standing on hateful or anti-democratic platforms.

(D) We also have to remember that small parties can play a value role in highlighting specific issues that have been overlooked, as has often been the case with 'Green' parties.

(E) In any case, the European experience suggests that there is no overall tendency for extremist parties to increase their numbers over time under proportional systems.

(F) Of course, no one committed to liberal and democratic values wants to see these kinds of parties taking seats in the legislature.

올포 8강 본문1

(A) Infants and toddlers begin to play a role when they imitate adults' language, dress, or actions.

(B) The child uses gestures and language to communicate his understanding of what this role represents.

(C) He uses the doctor kit or kitchen playthings as props to support his actions while he plays.

(D) Playing fantasy characters, such as a monster or a superhero, becomes common once a child is able to engage in more abstract thinking.

(E) As he becomes familiar with other people and their roles, he may imitate them with the actions and verbalizations of a grocer, waiter, or firefighter.

(F) Role-playing is an extension of representational skills.

(G) Children role-play when they use not only materials and objects but also voice and actions to represent others during play.

(H) An older child expands on this role by imitating familiar roles, such as a parent or doctor.

(I) For instance, he may use a cylinder-shaped block as a syringe when pretending to be a doctor.

올포 8강 본문2

(A) Indeed, language is the vehicle through which we learn about our social world, discover its rules and values, and express our personal natures, allowing us to connect with others, both in relationships of exchange and of caring.

(B) But cultures cannot be internalized without language.

(C) As far back as the origins of human history, groups of individuals sharing a common culture and language made contact with other groups, each unified by their own shared tongue.

(D) Cultures themselves interact.

(E) People are inherently social creatures, and in order to connect and regulate their social interactions, they must internalize their cultures.

(F) Of great value was anyone who could ably facilitate those intergroup contacts — those people who were multilingual.

(G) Today we humans exist in a globally interconnected world.

(H) We can transact with people from anywhere in seconds through the internet, or visit them through rapid means of travel, and in doing so experience a bit of their cultures.

올포 8강 본문3

(A) This is not teaching that rigidly conforms to an instructional, target-bound paradigm.

(B) It is essential to provide classrooms that have no ceiling when creative minds are operating and finding out.

(C) This teaching approach is exciting — it allows the practitioner to consider what is tempting in learning, what drives an individual to find out and discover.

(D) The teacher needs to remember what it is about learning that makes it irresistible, and then design their lessons, their spaces of learning and their teaching materials accordingly.

(E) To make art and design irresistible, the teacher must commit to providing opportunities that incite feelings of surprise and, thus motivational discovery and learning.

(F) Classrooms of young children should be alive, dynamic and changeable, encouraged by a theme of the moment or an interest that pervades children's imaginations.

240920

(A) While it is very easy to talk nonstop about your little genius and his or her remarkable behavior, this can be very stressful on your child.

(B) If not, you could end up with a driven perfectionist child or perhaps a dropout, or worse.

(C) You want your child to be who they are, not who they seem to be as defined by their incredible achievements.

(D) Gifted children feel pressured when their parents show them off too much.

(E) It is extremely important to limit your bragging behavior to your very close friends, or your parents.

(F) As the parent of a gifted child, you need to be aware of a certain common parent trap.

(G) Of course you are a proud parent, and you should be.

(H) This behavior creates expectations that they may not be able to live up to, and also creates a false sense of self for your child.

240921

(A) This is one of the great powers of self-help groups.

(B) One valuable technique for getting out of helplessness, depression, and situations which are predominantly being run by the thought, "I can't," is to choose to be with other persons who have resolved the problem with which we struggle.

(C) In some self-help groups, this is called "hanging out with the winners."

(D) Merely to be in their presence is beneficial.

(E) When we are in a negative state, we have given a lot of energy to negative thought forms, and the positive thought forms are weak.

(F) Those who are in a higher vibration are free of the energy from their negative thoughts and have energized positive thought forms.

(G) The benefit here is on the psychic level of consciousness, and there is a transfer of positive energy and relighting of one's own latent positive thought forms.

240922

(A) If they had not helped us adapt and survive, they would not have evolved with us.

(B) From an evolutionary perspective, an emotion is a kind of "program" that, when triggered, directs many of our activities (including attention, perception, memory, movement, expressions, etc.).

(C) Regardless of the specific ways in which they activate our systems, the specific emotions we possess are thought to exist because they have helped us (as a species) survive challenges within our environment long ago.

(D) For example, fear makes us very attentive, narrows our perceptual focus to threatening stimuli, will cause us either to face a situation (fight) or avoid it (flight), and may cause us to remember an experience more acutely (so that we avoid the threat in the future).

(E) Fear has helped us avoid dangers, expressing anger helps us scare off threats, and expressing positive emotions helps us bond with others.

(F) Our emotions are thought to exist because they have contributed to our survival as a species.

240923

(A) AI can also enhance the capabilities of low-skilled workers, with potentially positive effects on their wages and career prospects.

(B) For example, AI's capacity to translate written and spoken word in real-time can improve the performance of nonnative speakers in the workplace.

(C) Moreover, recent developments in AI-powered text generators can instantly improve the performance of lower-skilled individuals in domains such as writing, coding or customer service.

(D) AI-powered assistive devices to aid workers with visual, speech or hearing difficulties are becoming more widespread, improving the access to, and the quality of work for people with disabilities.

(E) By improving accessibility of the workplace for workers that are typically at a disadvantage in the labour market, AI can improve inclusiveness in the workplace.

(F) For example, speech recognition solutions for people with dysarthric voices, or live captioning systems for deaf and hard of hearing people can facilitate communication with colleagues and access to jobs where interpersonal communication is necessary.

240924

(A) For comparison, the average tree absorbs only 48 pounds of CO2 a year.

(B) Whales are highly efficient at carbon storage.

(C) From a climate perspective, each whale is the marine equivalent of thousands of trees.

(D) Whales also help sequester carbon by fertilizing the ocean as they release nutrient-rich waste, in turn increasing phytoplankton populations, which also sequester carbon — leading some scientists to call them the "engineers of marine ecosystems."

(E) When they die, each whale sequesters an average of 30 tons of carbon dioxide, taking that carbon out of the atmosphere for centuries.

(F) They called for a new global program of economic incentives to return whale populations to preindustrial whaling levels as one example of a "nature-based solution" to climate change.

(G) Calls are now being made for a global whale restoration program, to slow down climate change.

(H) In 2019, economists from the International Monetary Fund (IMF) estimated the value of the ecosystem services provided by each whale at over $2 million USD.

240929

(A) A department and its members will acquire "tunnel vision" which disallows them to see things as others see them.

(B) The varying departments and divisions within an organization will inevitably view any given situation from their own biased and prejudiced perspective.

(C) From an organizational viewpoint, one of the most fascinating examples of how any organization may contain many different types of culture is to recognize the functional operations of different departments within the organization.

(D) The choice of whether the structure is "mechanistic" or "organic" can have a profound influence on conflict management.

(E) Organic structures are more horizontal in nature, where decision making is less centralized and spread across the plane of the organization.

(F) A mechanistic structure has a vertical hierarchy with many rules, many procedures, and many levels of management involved in decision making.

(G) The very structure of organizations can create conflict.

240930

(A) As bicycles become more popular in a city, planners can convert more automobile lanes and entire streets to accommodate more of them.

(B) Some cities reserve an extensive network of lanes and streets for bikes, pedestrians, and the occasional service vehicle.

(C) Delivery vehicles are frequently a target of animus, but they are actually an essential component to making cities greener.

(D) Distributing food and other goods to neighborhood vendors allows them to operate smaller stores close to homes so that residents can walk, rather than drive, to get their groceries.

(E) Nevertheless, even the most bikeable cities still require motor vehicle lanes for taxis, emergency vehicles, and delivery trucks.

(F) An excellent alternative to calming traffic is removing it.

(G) A tightly packed delivery truck is a far more efficient transporter of goods than several hybrids carrying a few shopping bags each.

(H) This motivates people to travel by bike rather than by car, making streets safer for everyone.

240931

(A) But he wasn't one of the world's great composers because his work wasn't original. What he wrote sounded just like what everyone else was composing at the time.

(B) Have you ever seen the classic movie Amadeus?

(C) The musical forms, or ideas expressed within them, were completely new.

(D) Not everyone could understand the compositions of Beethoven, Brahms, or Stravinsky in their day.

(E) Effective composers have their own ideas.

(F) Now, Salieri wasn't a bad composer; in fact, he was a very good one.

(G) And yet, this is exactly one of the things that makes them so great.

(H) You hear again and again that some of the greatest composers were misunderstood in their own day.

(I) The reason for this initial lack of acceptance is unfamiliarity.

(J) The composer Antonio Salieri is the "host" of this movie; he's depicted as one of the most famous Nongreat composers — he lived at the time of Mozart and was completely overshadowed by him.

240932

(A) So when you start to watch television, before you absorb the message of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being shaped like television itself.

(B) Every time a new medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are putting on a new kind of goggles, with their own special colors and lenses.

(C) Each set of goggles you put on makes you see things differently.

(D) TV teaches you that the world is fast; that it's about surfaces and appearances.

(E) The way information gets to you, McLuhan argued, is more important than the information itself.

(F) It is gently guiding us to see the world according to a new set of codes.

(G) That's why Marshall McLuhan said that every time a new medium comes along — a new way for humans to communicate — it has buried in it a message.

240933

(A) Stuart Firestein opens his book, Ignorance, with an old proverb, "It is very difficult to find a black cat in a dark room, especially when there is no cat."

(B) History has many examples of scientists who searched fruitlessly for an essence because they used the wrong concept to guide their hypotheses.

(C) This statement beautifully sums up the search for essences.

(D) Concepts are vital to human survival, but we must also be careful with them because concepts open the door to essentialism.

(E) They encourage us to see things that aren't present.

(F) Firestein gives the example of luminiferous ether, a mysterious substance that was thought to fill the universe so that light would have a medium to move through.

(G) The ether was a black cat, writes Firestein, and physicists had been theorizing in a dark room, and then experimenting in it, looking for evidence of a cat that did not exist.

240934

(A) While social media attention is potentially an instrument to achieve ends like elite celebrity, some content creators desire ordinary fame as a social end in itself.

(B) Not unlike reality television stars, social media celebrities are often criticized for not having skills and talents associated with traditional, elite celebrity, such as acting or singing ability.

(C) Achieving ordinary fame as a social media celebrity is like doing well at a game, because in this sphere, fame is nothing more nor less than relatively high scores on attention scales, the metrics of subscribers, followers, Likes, or clicks built into social media applications.

(D) However, the criticism also misses the point that the phenomenon of ordinary celebrity reconstructs the meaning of fame.

(E) The elite celebrity is symbolized by the metaphor of the star, characterized by mystery and hierarchical distance and associated with naturalized qualities of talent and class.

(F) The ordinary celebrity attracts attention through regular and frequent interactions with other ordinary people.

(G) This criticism highlights the fact that digital content creators face real barriers to crossing over to the sphere of elite celebrity.

240935

(A) We feel as if we know it, because it is present in our short-term storage space ... but this short-term section has nothing to do with the long-term memory that we will need in order to recall the same information a few days later.

(B) After a few seconds or minutes, working memory already starts disappearing, and after a few days, the effect becomes enormous: unless you retest your knowledge, memory vanishes.

(C) Why do we have the illusion that cramming for an exam is the best learning strategy?

(D) To get information into long-term memory, it is essential to study the material, then test yourself, rather than spend all your time studying.

(E) It sits in our conscious working memory, in an active form.

(F) Because we are unable to differentiate between the various sections of our memory.

(G) Immediately after reading our textbook or our class notes, information is fully present in our mind.

240936

(A) Babies babble and later start to imitate the sounds their parents produce.

(B) Our modern cultures, in which we write, speak, read, build spaceships and go to school, can work only because we are not restricted to the behavior we are born with or learn by trial and error.

(C) We can learn a lot by simply watching others.

(D) Newborns, in the first week of life, have an inborn tendency to stick out their tongue if their parents stick out theirs.

(E) As children we learn a lot by observing what our parents and friends do.

(F) The discovery of mirror neurons has profoundly changed the way we think of a fundamental human capacity, learning by observation.

(G) Such imitation is not perfect.

(H) Later still, they play with vacuum cleaners and hammers in imitation of their parents.

(I) You may not see the tongue stick out each time you stick yours out at your newborn, but if you do it many times, the tongue will come out more often than if you do something different.

240937

(A) Have you ever been surprised to hear a recording of your own voice?

(B) You might have thought, "Is that really what my voice sounds like?"

(C) Maybe your accent is more pronounced in the recording than you realized, or your voice is higher than it seems to your own ears.

(D) This is of course quite a common experience.

(E) But because our vocal cords vibrate when we speak, there is a second internal path.

(F) Lower frequencies are emphasized along this pathway. That makes your voice sound deeper and richer to yourself than it may sound to other people.

(G) There are two pathways through which we perceive our own voice when we speak.

(H) The explanation is actually fairly simple.

(I) One is the route through which we perceive most external sounds, like waves that travel from the air through the outer, middle and inner ear.

(J) Vibrations are conducted through our bones and stimulate our inner ears directly.

240938

(A) "Analogous" traits are ones that have a common function but arose on different branches of the evolutionary tree and are in an important sense not "the same" organ.

(B) The wing of a bat and the front leg of a horse have very different functions, but they are all modifications of the forelimb of the ancestor of all mammals.

(C) "Homologous" traits, in contrast, may or may not have a common function, but they descended from a common ancestor and hence have some common structure that indicates their being "the same" organ.

(D) As a result, they share nonfunctional traits like the number of bones and the ways they are connected.

(E) Biologists distinguish two kinds of similarity.

(F) To distinguish analogy from homology, biologists usually look at the overall architecture of the organs and focus on their most useless properties.

(G) The wings of birds and the wings of bees are both used for flight and are similar in some ways because anything used for flight has to be built in those ways, but they arose independently in evolution and have nothing in common beyond their use in flight.

240939

(A) The data show that the ocean oxygen level has been falling more rapidly than the corresponding rise in water temperature.

(B) This is a worrisome and potentially disastrous consequence if allowed to continue to an ecosystem-threatening level.

(C) Seawater contains an abundance of dissolved oxygen that all marine animals breathe to stay alive.

(D) Now scientists have analyzed data indicating that the amount of dissolved oxygen in the oceans has been declining for more than a half century.

(E) Thus, as global warming raises the temperature of marine waters, it is self-evident that the amount of dissolved oxygen will decrease.

(F) It has long been established in physics that cold water holds more dissolved oxygen than warm water does — this is one reason that cold polar seas are full of life while tropical oceans are blue, clear, and relatively poorly populated with living creatures.

(G) Falling oxygen levels in water have the potential to impact the habitat of marine organisms worldwide and in recent years this has led to more frequent anoxic events that killed or displaced populations of fish, crabs, and many other organisms.

240940

(A) I give you this rock and you give me a treat to eat.

(B) If you put two monkeys in cages next to each other, and offer them both slices of cucumber for the rocks they already have, they will happily eat the cucumbers.

(C) Capuchins — New World Monkeys that live in large social groups — will, in captivity, trade with people all day long, especially if food is involved.

(D) If, however, you give one monkey grapes instead — grapes being universally preferred to cucumbers — the monkey that is still receiving cucumbers will begin to throw them back at the experimenter.

(E) Furthermore, she is now willing to abandon all gains — the cucumbers themselves — to communicate her displeasure to the experimenter.

(F) Even though she is still getting "paid" the same amount for her effort of sourcing rocks, and so her particular situation has not changed, the comparison to another makes the situation unfair.

240941~42

(A) Higher education has grown from an elite to a mass system across the world.

(B) Between 2000 and 2014, rates of participation in higher education almost doubled from 19% to 34% across the world among the members of the population in the school-leaving age category (typically 18-23).

(C) Changes from an elite system to a mass higher education system are associated with political needs to build a specialized workforce for the economy.

(D) In reality, sociopolitical changes to expand higher education have set up a 'field of contradictions' for assessment in higher education.

(E) In contrast, the relatively small numbers of students in elite systems in the past allowed for closer relationships between students and their teachers, with formative feedback shaping the minds, academic skills, and even the characters of students.

(F) In theory, the expansion of higher education to develop a highly skilled workforce should diminish the role of examinations in the selection and control of students, initiating approaches to assessment which enable lifelong learning: assessment for learning and a focus on feedback for development.

(G) Mass higher education requires efficient approaches to assessment, such as examinations and multiple-choice quizzes, with minimalist, impersonal, or standardised feedback, often causing students to focus more on grades than feedback.

(H) In Europe and the USA, increased rates of participation occurred in the decades after the Second World War.

(I) The dramatic expansion of higher education has been marked by a wider range of institutions of higher learning and a more diverse demographic of students.

It defines us and our existence.

<Finding What Defines Us> (①) Our Identity is our sense of who we are. (②) The formation of our identity begins from the moment we are born. (③) However, it is developed further every time we interact socially. (④) These interactions may take place with individuals-such as family members, friends, and teachers-or in formal or informal groups. (⑤) Cultural identity is a major component of our identity, as it teaches us about ourselves and gives us a sense of belonging.

교과서SL 본문2

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Food can be important to our sense of cultural identity because many kinds of food are closely tied to particular cultures.

(A) Take Korea as an example. Korean culture is becoming increasingly popular around the world. More and more people are trying Korean food and enjoying its healthy ingredients and unique flavors. As a result, non-Koreans are becoming familiar with Korean words related to food. Some of these terms have even been added to the Oxford English Dictionary. In fact, 9 of the 26 newly listed Korean words in the dictionary are related to food, including banchan, galbi, samgyeopsal, and mukbang.
(B) It is a mixture of Mexican recipes and common American ingredients. Despite its adaptability, food is a stable source of cultural identity for people. This is because food allows them to distinguish themselves from other cultural groups. All aspects of food-including the way it is prepared, cooked, served, and consumed-are part of cultural identity. A unique food-related word is sometimes an identifier of a certain culture.
(C) Some kinds of food are also often accompanied by specific cultural practices, such as using chopsticks. Still, food can easily travel across cultures. And when it does, it can develop into something new. One example is Mexican food in America.

Since the day my mother died, I haven't been able to enter an Asian grocery store without crying.

In the modern world, people from different cultural groups often mix with one another. Children whose parents are from two different cultural backgrounds have a multicultural identity. A multicultural identity also forms when parents adopt children from a different culture. These children may struggle to fit in with a certain cultural group. (①) Similarly, immigrants who try to adapt to a new culture may experience the same confusion. You might be able to understand the meaning of cultural confusion by reading the following passage written by a Korean American writer. (②) The shop is like a little piece of Korea. (③) Everywhere I look, I see familiar labels on items such as my favorite ramyeon or the tteok for making tteokguk, which Koreans eat on New Year's Day. The dumpling skins in the freezers bring back memories of my mother. (④) I remember when my mother and I used to fill the skins with ingredients. The sight of the banchan refrigerators reminds me of the taste of my mother's lovingly made side dishes. With my mother gone, I ask myself, "Am I still Korean? How can I be Korean if I have no one to ask which kind of rice we used to buy anymore?" (⑤)

For example, a Korean American may feel attached to their Korean cultural identity when playing yunnori on Chuseok, a Korean holiday similar to Thanksgiving.

Like the woman in this story, people with a multicultural identity sometimes have problems defining themselves. (①) However, there are some advantages to having a multicultural identity. (②) People with a multicultural identity naturally gain the ability to recognize cultural differences. (③) They can fill the gap between cultures and easily adapt to cross-cultural situations. (④) However, they will feel attached to their American cultural identity when they watch a parade on Thanksgiving Day. (⑤)

교과서SL 본문5

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Our cultural identity helps us to understand ourselves and our place in the world.

(A) In this way, food can be a way to maintain a link to the cultures that they come from.
(B) People with a multicultural identity, for example, may feel that their favorite dishes help them define who they are.
(C) Food can be a powerful connection to our cultural identity because it involves cultural traditions that get passed down from one person to another.

Importantly, justice is about advocating on behalf of all patients, whether they come in with a Western philosophical perspective or another philosophical perspective.

The concept of justice is not the law in the narrow sense. Rather, this principle involves ensuring that everyone benefits from treatment, as well as the distribution of access to it. (①) To apply this principle, we need to accept and value differences and diversity in our patients. (②) Patients come from different cultural, racial and religious backgrounds. Therefore, fairness and justice in this respect involves respecting and recognising their differences, not acting in a way that disadvantages the patient. (③) In this regard, we need to consider other people's cultural differences when treating them. (④) Justice is not about treating all patients the same because it is not possible to justifiably treat all patients the same, since all patients are different and present with different ailments or complaints. (⑤)

Why have cities only recently seen a sudden increase in "greening" — from green roofs to new parks to tree planting to more energy efficient buses — despite the fact that sweeping federal environmental legislation was enacted more than 30 years ago?

(A) Moreover, green cities are demonstrating that the alleged trade-off between jobs and the environment is a false dichotomy. A quality environment produces jobs; a polluted environment costs jobs.

(B) Quite simply, city leaders are recognizing that a cleaner environment is needed both to provide residents with a good quality of life and to compete in the global economy. America's manufacturing-based economy of the twentieth century has been transformed into a service-based knowledge economy.

(C) For the information age economy, environmental quality is a major economic asset. Skilled workers are increasingly footloose, able to settle just about anywhere there is broadband Internet access, and they are drawn to healthy. aesthetically pleasing environments.

People who reliably make money from the market are those who own a diverse portfolio of different kinds of investments, which spreads out the risk, with the broader principle that the market, over the long haul, will eventually increase in value.

"Human nature likes order," wrote the economist Burton Malkiel in his seminal book A Random Walk Down Wall Street. (①) "People find it hard to accept the notion of randomness." (②) Malkiel popularized the idea that the movement of any individual stock in the market is essentially random — it's impossible to know why a stock is doing what it's doing. (③) Picking individual stocks, or betting on certain trends, is much closer to gambling than science. (④) Which is why we shouldn't be too surprised that a cat is just as likely to make a killing on Wall Street as a day trader. (⑤)

Clients like competitions, since they provide an opportunity to choose between several designs — and several architects — while fund-raisers use competitions as a way to raise public interest in a building project.

Architects are ambivalent about competitions. (①) On a practical level, competitions are extremely expensive: entering a large competition can cost millions of dollars. (②) More important, competitions oblige the architect to work in a vacuum. In later life, I. M. Pei refused to enter competitions, since he considered that the best architecture could emerge only from a considered dialogue between architect and client. (③) Nevertheless, the public favors competitions, since they provide an opportunity for young talent to be recognized in a field that tends to privilege age and experience. (④) Everyone loves a horse race — except, perhaps, the horses. (⑤)

In the complex story of nature's ways, people exploring the wild's twisting paths often discover themselves caught in dangerous situations.

(A) Yet amid these serious situations, a remarkable turn of events occurs, like unexpected notes in a familiar song. In Oregon's forests in 1995, a man was found dead, initially blamed on a cougar, but subsequent investigation revealed otherwise.

(B) Bears, cougars, and other wild animals sometimes remind us of their formidable presence. Despite the infrequency, there are a considerable number of accumulated instances where these guardians of the wilderness become aggressors, resulting in tragic outcomes for unsuspecting explorers.

(C) Similarly, in 2015, a comparable incident occurred, with initial suspicions falling on a nearby wolf pack. However, upon closer investigation, it became apparent that the wolves were innocent bystanders in the man's tragic fate, emphasizing the complexity inherent in such wilderness tragedies.

In fact, some of the piles were far more profitable than others.

In an experiment conducted by Antoine Bechara, participants were given $2,000 in play money and four decks of cards and were told that they were to use them in a game. (①) Different individual cards won or lost different sums of money. They should just go ahead and turn the cards and try to win as much money as they could. But the cards were not random. (②) On average, it took the gamblers around fifty card-turns before they began to report a conscious 'hunch' that some of the decks were more profitable. (③) But when their behaviour was analysed, Bechara discovered something remarkable. Measurements of the electrical conductance of their skin, which can reveal levels of anxiety and nervousness, indicated that their emotions were subtly warning them against the bad decks after just ten turns. Their unconscious mind had worked out what was happening far quicker than their conscious minds and had warned them with a hit of bad feeling. (④) They knew before they knew. (⑤)

As the practice of medicine shifted from cure to prevention, doctors were now expected to provide results based on scientific evidence.

The introduction of scientific methods into medical practice transformed the profession as well as its object. (①) Until the late nineteenth century, doctors were not required to have studied medicine and were relied on mainly to provide comfort and guidance to their patients. (②) As a result of this access to forms of knowledge beyond the understanding of the general public, more authority and power was granted to the medical profession, and the nature of the doctor/patient relationship changed. (③) Once the source of a disease was identified, patients expected that doctors should be able to cure them. (④) Additionally, those doctors with scientific training were now distinguished from a range of alternative healers, from homeopaths to midwives, resulting in an elevation in the eyes of the public of the status of the profession as compared with other healing practices, which persists today. (⑤)

For millions of years, sea turtles would come to the beaches of Florida to spawn and their hatchlings would head toward the sea — to live a life far away — and to return to Florida years later.

(A) The sea beautifully reflects the light of the moon and the stars, and for millions of years, a simple algorithm of "head toward the light at night" allowed the turtles to effectively head toward the sea to pursue an effective life strategy. Well, then came Miami.

(B) Miami and the other big cities on the coast of Florida are filled with lots of bright lights at night, so this led to an ecological disaster for the sea turtles. Shaped by evolution to head toward light at night, hatchlings started toward the highways and cities by the millions — meeting premature death instead of a long sea-dwelling life.

(C) It turns out that the way the young turtles knew to head toward the direction of the ocean was based on light glimmering off the sea at night.

Traditionally, garbage is considered the detritus of consumer and industrial practices.

(A) Artists — most often at the leading edge of rethinking materiality, value, and beauty — are among the first social actors to have taken seriously the possibility of reusing trash to make new things. Taking the discarded objects of others as found materials, many artists work with trash in order to create new aesthetic objects while at the same time making a commentary on the place of trash in the social and cultural world.

(B) Perhaps precisely due to the proliferation of trash in material space, it has arguably also become a resource — something that has value and can be sold on at a profit.

(C) It is the stuff that is no longer useful, that we no longer wish to have in our homes or personal spaces, that we want to throw away.

The contents of your consciousness are continually changing.

(A) For example, in one study, 2,250 adults were contacted randomly during waking hours and asked whether their mind was wandering from their current activity. Almost half (47%) of the times they were asked to report, the participants said their mind was wandering. Another study concluded that mind wandering was more likely when subjects were bored, anxious, tired, or stressed.

(B) Rarely does consciousness come to a standstill. It moves, it flows, it fluctuates, it wanders.

(C) Recognizing that consciousness fluctuates continuously, William James long ago named this flow the stream of consciousness. If you could tape-record your thoughts, you would find an endless flow of ideas that zigzag in all directions. Even when you sleep, your consciousness moves through a series of transitions.

Born in New York City, Albert Lorey Groll was an etcher and also a landscape painter specializing in Western scenes.

(A) He painted landscapes in the vicinity of New York until about 1904. He then went West and sketched desert and mountain scenes in Arizona and New Mexico. The resulting painting "Arizona" won a gold medal at the Penn Academy of Fine Art (PAFA) in 1906.

(B) He was elected to the National Academy of Design in 1910. He became a landscape painter, it is said, because he was then too poor to pay for models. In 1899, he studied at the Royal Academy in Munich under N. Gysis and Loefftz as well as in London.

(C) Groll was the rare painter in northern New Mexico before World War I, choosing "bare mesas and towering cloud formations" rather than mountains. One of his paintings can be seen at the Octavia Fellin Public Library in Gallup. He died in New York City in 1952.

Prior to enacting the tax, Sweden's economy grew between 1961 and 1990 at an annual rate of 2.9 percent while the US economy grew at 3.7 percent.

A 2016 report by the Heritage Foundation that analyzed a carbon tax in the United States at one-third the rate paid by Swedish industrial firms argued that the tax would have "disastrous economic costs." (①) Has Sweden been severely harmed by its carbon tax? Hardly. (②) The gap between the Swedish and US growth rates fell after the tax was enacted. Sweden's GDP grew between 1991 and 2015 at an average annual rate of 2.1 percent, just a bit lower than the US growth rate of 2.4 percent. (③) This is not to argue that Sweden closed the gap between its growth rate and the US growth rate because of its carbon tax. (④) But it is hard to argue that the country has suffered a great deal due to its carbon tax. (⑤) In fact, Sweden's growth rate has exceeded the US growth rate since 2000.

Critics sometimes worry that by making it easier for small parties to win seats, proportional representation will encourage the growth of extremist groups standing on hateful or anti-democratic platforms.

(A) We also have to remember that small parties can play a value role in highlighting specific issues that have been overlooked, as has often been the case with 'Green' parties. In any case, the European experience suggests that there is no overall tendency for extremist parties to increase their numbers over time under proportional systems.

(B) But it would be wrong to rig our political system to exclude them just because we disagree with their views. Proportional voting systems provide a democratic vent for populist anger and discontent, creating clear incentives for mainstream parties to address underlying social problems and to win back votes.

(C) Of course, no one committed to liberal and democratic values wants to see these kinds of parties taking seats in the legislature.

Role-playing is an extension of representational skills.

(A) An older child expands on this role by imitating familiar roles, such as a parent or doctor. The child uses gestures and language to communicate his understanding of what this role represents. He uses the doctor kit or kitchen playthings as props to support his actions while he plays.

(B) Children role-play when they use not only materials and objects but also voice and actions to represent others during play. Infants and toddlers begin to play a role when they imitate adults' language, dress, or actions.

(C) For instance, he may use a cylinder-shaped block as a syringe when pretending to be a doctor. As he becomes familiar with other people and their roles, he may imitate them with the actions and verbalizations of a grocer, waiter, or firefighter. Playing fantasy characters, such as a monster or a superhero, becomes common once a child is able to engage in more abstract thinking.

If they had not helped us adapt and survive, they would not have evolved with us.

Our emotions are thought to exist because they have contributed to our survival as a species. (①) Fear has helped us avoid dangers, expressing anger helps us scare off threats, and expressing positive emotions helps us bond with others. (②) From an evolutionary perspective, an emotion is a kind of "program" that, when triggered, directs many of our activities (including attention, perception, memory, movement, expressions, etc.). (③) For example, fear makes us very attentive, narrows our perceptual focus to threatening stimuli, will cause us either to face a situation (fight) or avoid it (flight), and may cause us to remember an experience more acutely (so that we avoid the threat in the future). (④) Regardless of the specific ways in which they activate our systems, the specific emotions we possess are thought to exist because they have helped us (as a species) survive challenges within our environment long ago. (⑤)

아래 주어진 문장이 들어갈 곳으로 적당한 곳을 고르시오.

When they die, each whale sequesters an average of 30 tons of carbon dioxide, taking that carbon out of the atmosphere for centuries.

Whales are highly efficient at carbon storage. (①) For comparison, the average tree absorbs only 48 pounds of CO2 a year. (②) From a climate perspective, each whale is the marine equivalent of thousands of trees. (③) Whales also help sequester carbon by fertilizing the ocean as they release nutrient-rich waste, in turn increasing phytoplankton populations, which also sequester carbon — leading some scientists to call them the "engineers of marine ecosystems." (④) In 2019, economists from the International Monetary Fund (IMF) estimated the value of the ecosystem services provided by each whale at over $2 million USD. (⑤) They called for a new global program of economic incentives to return whale populations to preindustrial whaling levels as one example of a "nature-based solution" to climate change. Calls are now being made for a global whale restoration program, to slow down climate change.

From an organizational viewpoint, one of the most fascinating examples of how any organization may contain many different types of culture is to recognize the functional operations of different departments within the organization.

(A) A mechanistic structure has a vertical hierarchy with many rules, many procedures, and many levels of management involved in decision making. Organic structures are more horizontal in nature, where decision making is less centralized and spread across the plane of the organization.

(B) The very structure of organizations can create conflict. The choice of whether the structure is "mechanistic" or "organic" can have a profound influence on conflict management.

(C) The varying departments and divisions within an organization will inevitably view any given situation from their own biased and prejudiced perspective. A department and its members will acquire "tunnel vision" which disallows them to see things as others see them.

240930

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

An excellent alternative to calming traffic is removing it.

(A) Delivery vehicles are frequently a target of animus, but they are actually an essential component to making cities greener. A tightly packed delivery truck is a far more efficient transporter of goods than several hybrids carrying a few shopping bags each. Distributing food and other goods to neighborhood vendors allows them to operate smaller stores close to homes so that residents can walk, rather than drive, to get their groceries.

(B) As bicycles become more popular in a city, planners can convert more automobile lanes and entire streets to accommodate more of them. Nevertheless, even the most bikeable cities still require motor vehicle lanes for taxis, emergency vehicles, and delivery trucks.

(C) Some cities reserve an extensive network of lanes and streets for bikes, pedestrians, and the occasional service vehicle. This motivates people to travel by bike rather than by car, making streets safer for everyone.

240931

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

You hear again and again that some of the greatest composers were misunderstood in their own day.

(A) Not everyone could understand the compositions of Beethoven, Brahms, or Stravinsky in their day. The reason for this initial lack of acceptance is unfamiliarity. The musical forms, or ideas expressed within them, were completely new.

(B) The composer Antonio Salieri is the "host" of this movie; he's depicted as one of the most famous Nongreat composers — he lived at the time of Mozart and was completely overshadowed by him. Now, Salieri wasn't a bad composer; in fact, he was a very good one. But he wasn't one of the world's great composers because his work wasn't original. What he wrote sounded just like what everyone else was composing at the time.

(C) And yet, this is exactly one of the things that makes them so great. Effective composers have their own ideas. Have you ever seen the classic movie Amadeus?

They encourage us to see things that aren't present.

Concepts are vital to human survival, but we must also be careful with them because concepts open the door to essentialism. (①) Stuart Firestein opens his book, Ignorance, with an old proverb, "It is very difficult to find a black cat in a dark room, especially when there is no cat." (②) This statement beautifully sums up the search for essences. History has many examples of scientists who searched fruitlessly for an essence because they used the wrong concept to guide their hypotheses. (③) Firestein gives the example of luminiferous ether, a mysterious substance that was thought to fill the universe so that light would have a medium to move through. (④) The ether was a black cat, writes Firestein, and physicists had been theorizing in a dark room, and then experimenting in it, looking for evidence of a cat that did not exist. (⑤)

240934

However, the criticism also misses the point that the phenomenon of ordinary celebrity reconstructs the meaning of fame.

While social media attention is potentially an instrument to achieve ends like elite celebrity, some content creators desire ordinary fame as a social end in itself. (①) Not unlike reality television stars, social media celebrities are often criticized for not having skills and talents associated with traditional, elite celebrity, such as acting or singing ability. (②) This criticism highlights the fact that digital content creators face real barriers to crossing over to the sphere of elite celebrity. (③) The elite celebrity is symbolized by the metaphor of the star, characterized by mystery and hierarchical distance and associated with naturalized qualities of talent and class. (④) The ordinary celebrity attracts attention through regular and frequent interactions with other ordinary people. (⑤) Achieving ordinary fame as a social media celebrity is like doing well at a game, because in this sphere, fame is nothing more nor less than relatively high scores on attention scales, the metrics of subscribers, followers, Likes, or clicks built into social media applications.

Why do we have the illusion that cramming for an exam is the best learning strategy?

(A) It sits in our conscious working memory, in an active form. We feel as if we know it, because it is present in our short-term storage space ... but this short-term section has nothing to do with the long-term memory that we will need in order to recall the same information a few days later.

(B) After a few seconds or minutes, working memory already starts disappearing, and after a few days, the effect becomes enormous: unless you retest your knowledge, memory vanishes. To get information into long-term memory, it is essential to study the material, then test yourself, rather than spend all your time studying.

(C) Because we are unable to differentiate between the various sections of our memory. Immediately after reading our textbook or our class notes, information is fully present in our mind.

240936

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

The discovery of mirror neurons has profoundly changed the way we think of a fundamental human capacity, learning by observation.

(A) Later still, they play with vacuum cleaners and hammers in imitation of their parents. Our modern cultures, in which we write, speak, read, build spaceships and go to school, can work only because we are not restricted to the behavior we are born with or learn by trial and error. We can learn a lot by simply watching others.

(B) As children we learn a lot by observing what our parents and friends do. Newborns, in the first week of life, have an inborn tendency to stick out their tongue if their parents stick out theirs.

(C) Such imitation is not perfect. You may not see the tongue stick out each time you stick yours out at your newborn, but if you do it many times, the tongue will come out more often than if you do something different. Babies babble and later start to imitate the sounds their parents produce.

240937

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

Have you ever been surprised to hear a recording of your own voice?

(A) The explanation is actually fairly simple. There are two pathways through which we perceive our own voice when we speak. One is the route through which we perceive most external sounds, like waves that travel from the air through the outer, middle and inner ear.

(B) You might have thought, "Is that really what my voice sounds like?" Maybe your accent is more pronounced in the recording than you realized, or your voice is higher than it seems to your own ears. This is of course quite a common experience.

(C) But because our vocal cords vibrate when we speak, there is a second internal path. Vibrations are conducted through our bones and stimulate our inner ears directly. Lower frequencies are emphasized along this pathway. That makes your voice sound deeper and richer to yourself than it may sound to other people.

The wings of birds and the wings of bees are both used for flight and are similar in some ways because anything used for flight has to be built in those ways, but they arose independently in evolution and have nothing in common beyond their use in flight.

Biologists distinguish two kinds of similarity. "Analogous" traits are ones that have a common function but arose on different branches of the evolutionary tree and are in an important sense not "the same" organ. (①) "Homologous" traits, in contrast, may or may not have a common function, but they descended from a common ancestor and hence have some common structure that indicates their being "the same" organ. (②) The wing of a bat and the front leg of a horse have very different functions, but they are all modifications of the forelimb of the ancestor of all mammals. (③) As a result, they share nonfunctional traits like the number of bones and the ways they are connected. (④) To distinguish analogy from homology, biologists usually look at the overall architecture of the organs and focus on their most useless properties. (⑤)

Now scientists have analyzed data indicating that the amount of dissolved oxygen in the oceans has been declining for more than a half century.

Seawater contains an abundance of dissolved oxygen that all marine animals breathe to stay alive. It has long been established in physics that cold water holds more dissolved oxygen than warm water does — this is one reason that cold polar seas are full of life while tropical oceans are blue, clear, and relatively poorly populated with living creatures. (①) Thus, as global warming raises the temperature of marine waters, it is self-evident that the amount of dissolved oxygen will decrease. (②) This is a worrisome and potentially disastrous consequence if allowed to continue to an ecosystem-threatening level. (③) The data show that the ocean oxygen level has been falling more rapidly than the corresponding rise in water temperature. (④) Falling oxygen levels in water have the potential to impact the habitat of marine organisms worldwide and in recent years this has led to more frequent anoxic events that killed or displaced populations of fish, crabs, and many other organisms. (⑤)

> If, however, you give one monkey grapes instead — grapes being universally preferred to cucumbers — the monkey that is still receiving cucumbers will begin to throw them back at the experimenter.

Capuchins — New World Monkeys that live in large social groups — will, in captivity, trade with people all day long, especially if food is involved. (①) I give you this rock and you give me a treat to eat. (②) If you put two monkeys in cages next to each other, and offer them both slices of cucumber for the rocks they already have, they will happily eat the cucumbers. (③) Even though she is still getting "paid" the same amount for her effort of sourcing rocks, and so her particular situation has not changed, the comparison to another makes the situation unfair. (④) Furthermore, she is now willing to abandon all gains — the cucumbers themselves — to communicate her displeasure to the experimenter. (⑤)

아래 주어진 문장 다음에 이어질 문장들의 적절한 순서를 쓰시오.

> Higher education has grown from an elite to a mass system across the world.

(A) In reality, sociopolitical changes to expand higher education have set up a 'field of contradictions' for assessment in higher education. Mass higher education requires efficient approaches to assessment, such as examinations and multiple-choice quizzes, with minimalist, impersonal, or standardised feedback, often causing students to focus more on grades than feedback. In contrast, the relatively small numbers of students in elite systems in the past allowed for closer relationships between students and their teachers, with formative feedback shaping the minds, academic skills, and even the characters of students.

(B) In Europe and the USA, increased rates of participation occurred in the decades after the Second World War. Between 2000 and 2014, rates of participation in higher education almost doubled from 19% to 34% across the world among the members of the population in the school-leaving age category (typically 18-23).

(C) The dramatic expansion of higher education has been marked by a wider range of institutions of higher learning and a more diverse demographic of students. Changes from an elite system to a mass higher education system are associated with political needs to build a specialized workforce for the economy. In theory, the expansion of higher education to develop a highly skilled workforce should diminish the role of examinations in the selection and control of students, initiating approaches to assessment which enable lifelong learning: assessment for learning and a focus on feedback for development.

C_____ food does many familiar things. It makes our food **s** _____, creates **d**_____ tastes, and **r**_____ the risk of going bad. Heating can allow us to open, cut, or mash **t** _____ foods. But **n**_____ of these advantages is as **i** _____ as a **l**_____ aspect: **c** _____ **i**_____ the amount of **e**_____ our bodies **o**_____ from our food. The **e**_____ energy gave the first cooks **b**_____ **a**_____. They **s**_____ and **r**_____ better than before. Their genes **s**_____. Their bodies responded by biologically **a**_____ to cooked food, shaped by **n**_____ **s**_____ to take **m** _____ advantage of the new diet. There were changes in anatomy, physiology, ecology, life history, psychology, and society. Fossil evidence indicates that this **d**_____ arose not just some tens of thousands of years ago, but right back at the **b**_____ of our time on Earth, at the start of human **e**_____. We should indeed pin our **h** _____ on **c**_____.

>> 내용요약

C_____ **i**_____ the **e**_____ we obtain from food, giving early humans **b**_____ **a**_____ that shaped our **e**_____ from the very **b**_____.

Cooked food does many familiar things. It makes our food **safer**, creates **delicious** tastes, and **reduces** the risk of going bad. Heating can allow us to open, cut, or mash **tough** foods. But **none** of these advantages is as **important** as a **little-appreciated** aspect: **cooking increases** the amount of **energy** our bodies **obtain** from our food. The **extra** energy gave the first cooks **biological advantages**. They **survived** and **reproduced** better than before. Their genes **spread**. Their bodies responded by biologically **adapting** to cooked food, shaped by **natural selection** to take **maximum** advantage of the new diet. There were changes in anatomy, physiology, ecology, life history, psychology, and society. Fossil evidence indicates that this **dependence** arose not just some tens of thousands of years ago, but right back at the **beginning** of our time on Earth, at the start of human **evolution**. We should indeed pin our **humanity** on **cooks**.

>> 내용요약

Cooking increases the **energy** we obtain from food, giving early humans **biological advantages** that shaped our **evolution** from the very **beginning**.

One valuable technique for **g**_____ **o**___ **o**__ helplessness, depression, and situations which are predominantly being **r**___ by the thought, "I can't," is to choose to **b**__ **w**____ other persons who have **r**_____ the problem with which we **s**_____. This is one of the great **p**_____ of self-help groups. When we are in a **n** _____ state, we have given a lot of energy to **n** _____ thought forms, and the **p**_____ thought forms are **w**____. Those who are in a **h**_____ vibration are free of the energy from their **n**_____ thoughts and have **e** _____ positive thought forms. Merely to be in their **p** _____ is **b**_____. In some self-help groups, this is called "**h**_____ **o**___ with the winners." The **b** _____ here is on the psychic level of consciousness, and there is a **t**_____ of positive energy and **r**_____ of one's own latent positive thought forms.

>> 내용요약

When **s**_____ with negative feelings, participating self-help groups where members have successfully **o**_____ issues **s**_____ to those we have can be highly advantageous, and which facilitates a **t**_____ of positive energy and helps **e**_____ our own positive thought forms.

One valuable technique for **getting out of** helplessness, depression, and situations which are predominantly being **run** by the thought, "I can't," is to choose to **be with** other persons who have **resolved** the problem with which we **struggle**. This is one of the great **powers** of self-help groups. When we are in a **negative** state, we have given a lot of energy to **negative** thought forms, and the **positive** thought forms are **weak**. Those who are in a **higher** vibration are free of the energy from their **negative** thoughts and have **energized** positive thought forms. Merely to be in their **presence** is **beneficial**. In some self-help groups, this is called "**hanging out** with the winners." The **benefit** here is on the psychic level of consciousness, and there is a **transfer** of positive energy and **relighting** of one's own latent positive thought forms.

>> 내용요약

When **struggling** with negative feelings, participating self-help groups where members have successfully **overcome** issues **similar** to those we have can be highly advantageous, and which facilitates a **transfer** of positive energy and helps **enhance** our own positive thought forms.

240922

Our **e**_____ are thought to exist because they have contributed to our **s**_____ as a species. Fear has helped us **a**_____ dangers, expressing anger helps us **s**_____ off threats, and expressing positive emotions helps us **b**_____ with others. From an evolutionary perspective, an emotion is a kind of "program" that, when **t**_____, **d**_____ many of our activities (including attention, perception, memory, movement, expressions, etc.). **F**____ **e**_____, fear makes us very **a**_____, **n**_____ our perceptual focus to **t**_____ stimuli, will cause us either to **f**_____ a situation (fight) or **a**_____ it (flight), and may cause us to **r**_____ an experience more acutely (so that we **a**_____ the threat in the future). Regardless of the specific ways in which they **a**_____ our systems, the specific emotions we possess are thought to exist because they have helped us (as a species) survive **c**_____ within our environment long ago. If they had not helped us **a**_____ and **s**_____, they would not have **e**_____ with us.

>> 내용요약

Human **e**_____ are believed to have **e**_____ value and exist because they have played a crucial role in our **s**_____, acting as a mechanism that influences our responses and **a**_____.

Our **emotions** are thought to exist because they have contributed to our **survival** as a species. Fear has helped us **avoid** dangers, expressing anger helps us **scare** off threats, and expressing positive emotions helps us **bond** with others. From an evolutionary perspective, an emotion is a kind of "program" that, when **triggered**, **directs** many of our activities (including attention, perception, memory, movement, expressions, etc.). **For example**, fear makes us very **attentive**, **narrows** our perceptual focus to **threatening** stimuli, will cause us either to **face** a situation (fight) or **avoid** it (flight), and may cause us to **remember** an experience more acutely (so that we **avoid** the threat in the future). Regardless of the specific ways in which they **activate** our systems, the specific emotions we possess are thought to exist because they have helped us (as a species) survive **challenges** within our environment long ago. If they had not helped us **adapt** and **survive**, they would not have **evolved** with us.

>> 내용요약

Human **emotions** are believed to have **evolutionary** value and exist because they have played a crucial role in our **survival**, acting as a mechanism that influences our responses and **activities**.

240923

By **i**_____ accessibility of the workplace for workers that are typically at a **d**_____ in the labour market, AI can **i**_____ **i**_____ in the workplace. AI-powered assistive devices to **a**____ workers with visual, speech or hearing **d**_____ are becoming more **w**_____, **i**_____ the access to, and the quality of work for people with **d**_____. **F**____ **e**_____, speech recognition solutions for people with dysarthric voices, or live captioning systems for **d**_____ and **h**_____ of hearing people can **f**_____ communication with colleagues and access to jobs where **i**_____ communication is **n**_____. AI can **a**_____ **e**_____ the capabilities of low-skilled workers, with potentially **p**_____ effects on their wages and career prospects. **F**____ **e**_____, AI's capacity to **t**_____ written and spoken word in real-time can **i**_____ the performance of nonnative speakers in the workplace. **M**_____, recent developments in AI-powered text generators can instantly **i**_____ the performance of **l**_____ individuals in domains such as writing, coding or customer service.

>> 내용요약

Not only does AI enhance **i**_____ by providing workers with **d**_____ with assistive devices to **i**_____ their accessibility but also develop the capabilities of low-skilled workers to make them have better **w**_____ and career by presenting real-time **t**_____ services and text generation services.

By **improving** accessibility of the workplace for workers that are typically at a **disadvantage** in the labour market, AI can **improve inclusiveness** in the workplace. AI-powered assistive devices to **aid** workers with visual, speech or hearing **difficulties** are becoming more **widespread**, **improving** the access to, and the quality of work for people with **disabilities**. **For example**, speech recognition solutions for people with dysarthric voices, or live captioning systems for **deaf** and **hard** of hearing people can **facilitate** communication with colleagues and access to jobs where **interpersonal** communication is **necessary**. AI can **also enhance** the capabilities of low-skilled workers, with potentially **positive** effects on their wages and career prospects. **For example**, AI's capacity to **translate** written and spoken word in real-time can **improve** the performance of nonnative speakers in the workplace. **Moreover**, recent developments in AI-powered text generators can instantly **improve** the performance of **lower-skilled** individuals in domains such as writing, coding or customer service.

>> 내용요약

Not only does AI enhance **inclusiveness** by providing workers with **difficulties** with assistive devices to **improve** their accessibility but also develop the capabilities of low-skilled workers to make them have better **wages** and career by presenting real-time **translation** services and text generation services.

240924

Whales are highly **e**_____ at carbon **s**_____. When they die, each whale **s**_____ an average of 30 tons of carbon dioxide, **t**_____ that carbon out of the **a**_____ for centuries. For comparison, the average tree **a**_____ only 48 pounds of CO2 a year. From a climate perspective, each whale is the marine **e**_____ of thousands of trees. Whales also help **s**_____ carbon by **f**_____ the ocean as they **r**_____ nutrient-rich waste, in turn **i**_____ phytoplankton populations, which also sequester carbon — **l**_____ some scientists to call them the "engineers of marine ecosystems." In 2019, economists from the International Monetary Fund (IMF) **e**_____ the value of the ecosystem services provided by each whale at over $2 million USD. They **c**_____ **f**____ a new global program of economic incentives to **r**_____ whale populations to preindustrial whaling levels as one example of a "nature-based solution" to climate change. Calls are now being **m**_____ for a global whale **r**_____ program, to **s**_____ **d**_____ climate change.

>> 내용요약

The role of whales in **a**_____ carbon is very important, **s**_____ the annual capacity of the average tree, so a global program to **r**_____ whale populations is suggested as a solution to decelerate **c**_____ **c**_____.

Whales are highly **efficient** at carbon **storage**. When they die, each whale **sequesters** an average of 30 tons of carbon dioxide, **taking** that carbon out of the **atmosphere** for centuries. For comparison, the average tree **absorbs** only 48 pounds of CO2 a year. From a climate perspective, each whale is the marine **equivalent** of thousands of trees. Whales also help **sequester** carbon by **fertilizing** the ocean as they **release** nutrient-rich waste, in turn **increasing** phytoplankton populations, which also sequester carbon — **leading** some scientists to call them the "engineers of marine ecosystems." In 2019, economists from the International Monetary Fund (IMF) **estimated** the value of the ecosystem services provided by each whale at over $2 million USD. They **called for** a new global program of economic incentives to **return** whale populations to preindustrial whaling levels as one example of a "nature-based solution" to climate change. Calls are now being **made** for a global whale **restoration** program, to **slow down** climate change.

>> 내용요약

The role of whales in **absorbing** carbon is very important, **surpassing** the annual capacity of the average tree, so a global program to **recover** whale populations is suggested as a solution to decelerate **climate change**.

240929

From an organizational viewpoint, one of the most **f** _____ examples of how any organization may **c** _____ many different types of **c**_____ is to recognize the **f**_____ operations of different **d**_____ **w**_____ the **o**_____. The **v**_____ departments and divisions within an organization will **i** _____ view any given situation from their own **b** _____ and **p**_____ perspective. A department and its members will acquire "tunnel vision" which **d**_____ them to see things as others see them. The very **s**_____ of organizations can create **c**_____. The choice of whether the structure is "**m**_____" or "**o**_____" can have a **p**_____ **i**_____ on **c**_____ **m** _____. A **m**_____ structure has a **v** _____ **h**_____ with many rules, many **p** _____, and many levels of management involved in decision making. **O**_____ structures are more **h** _____ in nature, where decision making is **l**_____ centralized and **s**_____ across the plane of the organization.

>> 내용요약

Organizations often have different **c**_____ across departments, leading to **b**_____ perspectives and potential **c** _____. The structure, whether mechanistic (hierarchical) or organic (decentralized), profoundly **i**_____ conflict management.

From an organizational viewpoint, one of the most **fascinating** examples of how any organization may **contain** many different types of **culture** is to recognize the **functional** operations of different **departments within** the **organization**. The **varying** departments and divisions within an organization will **inevitably** view any given situation from their own **biased** and **prejudiced** perspective. A department and its members will acquire "tunnel vision" which **disallows** them to see things as others see them. The very **structure** of organizations can create **conflict**. The choice of whether the structure is "**mechanistic**" or "**organic**" can have a **profound influence** on **conflict management**. A **mechanistic** structure has a **vertical hierarchy** with many rules, many **procedures**, and many levels of management involved in decision making. **Organic** structures are more **horizontal** in nature, where decision making is **less** centralized and **spread** across the plane of the organization.

>> 내용요약

Organizations often have different **cultures** across departments, leading to **biased** perspectives and potential **conflicts**. The structure, whether mechanistic (hierarchical) or organic (decentralized), profoundly **influences** conflict management.

240930

An excellent **a**_____ to **c**_____ traffic is **r**_____ it. Some cities **r**_____ an **e**_____ network of lanes and streets for bikes, pedestrians, and the **o**_____ service vehicle. This **m**_____ people to travel by bike rather than by **c**____, making streets **s**_____ for everyone. As bicycles become more **p**_____ in a city, planners can **c**_____ **m**_____ automobile lanes and entire streets to **a**_____ more of them. **N**_____, even the **m**_____ bikeable cities still **r**_____ motor vehicle lanes for taxis, **e**_____ vehicles, and **d**_____ trucks. Delivery vehicles are **f**_____ a target of **a**_____, but they are actually an **e**_____ component to making cities **g**_____. A tightly **p**_____ delivery truck is a far **m**_____ **e**_____ transporter of goods than several hybrids carrying **a**_ **f**____ shopping bags each. **D**_____ food and other goods to neighborhood vendors **a**_____ them to operate **s**_____ stores close to homes so that residents can **w**_____, rather than **d**_____, to get their groceries.

>> 내용요약

An effective way to **c**_____ traffic is by **r**_____ it, **c**_____ streets for bikes and pedestrians. While cities still need motor vehicle lanes for **e**_____ services, delivery trucks play a crucial role in making cities **g**_____ by efficiently **d**_____ goods.

An excellent **alternative** to **calming** traffic is **removing** it. Some cities **reserve** an **extensive** network of lanes and streets for bikes, pedestrians, and the **occasional** service vehicle. This **motivates** people to travel by bike rather than by **car**, making streets **safer** for everyone. As bicycles become more **popular** in a city, planners can **convert more** automobile lanes and entire streets to **accommodate** more of them. **Nevertheless**, even the **most** bikeable cities still **require** motor vehicle lanes for taxis, **emergency** vehicles, and **delivery** trucks. Delivery vehicles are **frequently** a target of **animus**, but they are actually an **essential** component to making cities **greener**. A tightly **packed** delivery truck is a far **more efficient** transporter of goods than several hybrids carrying **a few** shopping bags each. **Distributing** food and other goods to neighborhood vendors **allows** them to operate **smaller** stores close to homes so that residents can **walk**, rather than **drive**, to get their groceries.

>> 내용요약

An effective way to **calm** traffic is by **reducing** it, **converting** streets for bikes and pedestrians. While cities still need motor vehicle lanes for **essential** services, delivery trucks play a crucial role in making cities **greener** by efficiently **distributing** goods.

240931

You hear again and again that some of the greatest composers were **m**_____ in their **o**___ day. Not everyone could **u**_____ the compositions of Beethoven, Brahms, or Stravinsky in their day. The reason for this **i**_____ **l**____ of **a**_____ is **u**_____. The musical forms, or ideas expressed within them, were completely **n**___. **A**___ **y**___, this is exactly one of the things that makes them so **g**_____. Effective composers have their **o**___ ideas. Have you ever seen the classic movie Amadeus? The composer Antonio Salieri is the "host" of this movie; he's **d**_____ as one of the most famous **N**_____ composers — he lived at the time of Mozart and was completely **o**_____ by him. Now, Salieri wasn't a **b**___ composer; in fact, he was a very **g**____ one. **B**___ he wasn't one of the world's **g**_____ composers because his work wasn't **o**_____. What he wrote sounded just **l**____ what everyone else was composing at the time.

>> 내용요약

Great composers' pieces were often not properly **e**_____ at the time because of their **n**_____ and originality, but these characteristics make them **e**_____ composers, as seen in the case of Salieri, Mozart's contemporary.

You hear again and again that some of the greatest composers were **misunderstood** in their **own** day. Not everyone could **understand** the compositions of Beethoven, Brahms, or Stravinsky in their day. The reason for this **initial lack** of **acceptance** is **unfamiliarity**. The musical forms, or ideas expressed within them, were completely **new**. **And yet**, this is exactly one of the things that makes them so **great**. Effective composers have their **own** ideas. Have you ever seen the classic movie Amadeus? The composer Antonio Salieri is the "host" of this movie; he's **depicted** as one of the most famous **Nongreat** composers — he lived at the time of Mozart and was completely **overshadowed** by him. Now, Salieri wasn't a **bad** composer; in fact, he was a very **good** one. **But** he wasn't one of the world's **great** composers because his work wasn't **original**. What he wrote sounded just **like** what everyone else was composing at the time.

>> 내용요약

Great composers' pieces were often not properly **evaluated** at the time because of their **novelty** and originality, but these characteristics make them **exceptional** composers, as seen in the case of Salieri, Mozart's contemporary.

240932

Every time a **n**____ medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are **p**_____ **o**___ a new kind of **g** _____, with their own **s**_____ colors and lenses. Each set of goggles you put on makes you **s**____ things **d** _____. So when you start to watch television, before you **a**_____ the **m**_____ of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being **s**_____ **l**_____ television itself. **T**_____ **w** ____ Marshall McLuhan said that every time a new medium **c** _____ **a**_____ — a new way for humans to **c** _____ — it has **b**_____ in it a message. It is gently **g**_____ us to **s**____ the world **a**_____ **t**___ a new set of **c**_____. The way information **g**_____ to you, McLuhan argued, is more **i**_____ than the information itself. TV **t** _____ you that the world is **f**_____; that it's about surfaces and **a**_____.

>> 내용요약

A new medium **d**_____ the way its users **v**_____ things, and in this regard, Marshall McLuhan asserted that a new medium has hidden a **m**_____ in it and the **m**_____ of transmitting information is more **c**_____ than the information itself.

Every time a **new** medium comes along — whether it's the invention of the printed book, or TV, or SNS — and you start to use it, it's like you are **putting on** a new kind of **goggles**, with their own **special** colors and lenses. Each set of goggles you put on makes you **see** things **differently**. So when you start to watch television, before you **absorb** the **message** of any particular TV show — whether it's Wheel of Fortune or The Wire — you start to see the world as being **shaped like** television itself. **That's why** Marshall McLuhan said that every time a new medium **comes along** — a new way for humans to **communicate** — it has **buried** in it a message. It is gently **guiding** us to **see** the world **according to** a new set of **codes**. The way information **gets** to you, McLuhan argued, is more **important** than the information itself. TV **teaches** you that the world is **fast**; that it's about surfaces and **appearances**.

>> 내용요약

A new medium **determines** the way its users **view** things, and in this regard, Marshall McLuhan asserted that a new medium has hidden a **message** in it and the **means** of transmitting information is more **crucial** than the information itself.

240933

Concepts are **v**_____ to human **s**_____, but we must also be **c**_____ with them because concepts open the door to **e**_____. They **e**_____ us to see things that aren't **p**_____. Stuart Firestein opens his book, Ignorance, with an old proverb, "It is very **d**_____ to find a black cat in a **d**_____ room, especially when there is no cat." This statement beautifully **s**_____ **u**_____ the **s**_____ for essences. History has many examples of scientists who searched **f**_____ for an essence because they used the **w**_____ concept to **g**_____ their **h**_____. Firestein gives the example of luminiferous ether, a mysterious substance that was thought to **f**_____ the universe so that light would have a medium to **m**_____ **t**_____. The ether was a black cat, writes Firestein, and physicists had been **t**_____ in a dark room, and then **e**_____ in it, **l**_____ **f**_____ evidence of a cat that did not **e**_____.

>> 내용요약

Concepts sometimes make us look at things that don't **e**_____, **p**_____ an essence that didn't exist from the beginning, as if, in a **d**_____ room, we were **l**_____ **f**_____ a black cat that was **a**_____.

Concepts are **vital** to human **survival**, but we must also be **careful** with them because concepts open the door to **essentialism**. They **encourage** us to see things that aren't **present**. Stuart Firestein opens his book, Ignorance, with an old proverb, "It is very **difficult** to find a black cat in a **dark** room, especially when there is no cat." This statement beautifully **sums up** the **search** for essences. History has many examples of scientists who searched **fruitlessly** for an essence because they used the **wrong** concept to **guide** their **hypotheses**. Firestein gives the example of luminiferous ether, a mysterious substance that was thought to **fill** the universe so that light would have a medium to **move through**. The ether was a black cat, writes Firestein, and physicists had been **theorizing** in a dark room, and then **experimenting** in it, **looking for** evidence of a cat that did not **exist**.

>> 내용요약

Concepts sometimes make us look at things that don't **exist**, **pursuing** an essence that didn't exist from the beginning, as if, in a **dark** room, we were **looking for** a black cat that was **absent**.

240934

While social media attention is potentially an instrument to **a** _____ ends like **e**_____ **c**_____, some content creators **d**_____ **o**_____ fame as a **s**_____ end in itself. Not **u**_____ reality television stars, social media celebrities are often **c**_____ for not having skills and talents associated with **t**_____, elite celebrity, such as acting or singing ability. This **c**_____ **h** _____ the fact that digital content creators face real **b** _____ to **c**_____ **o**_____ to the sphere of elite celebrity. **H**_____, the criticism **a**_____ **m**_____ the point that the phenomenon of ordinary celebrity **r** _____ the meaning of fame. The elite celebrity is **s** _____ by the metaphor of the star, characterized by **m** _____ and **h**_____ distance and associated with **n**_____ qualities of talent and class. The **o** _____ celebrity **a**_____ attention through regular and frequent **i**_____ with other ordinary people. Achieving **o**_____ fame as a social media celebrity is **l** _____ doing well at a game, because in this sphere, fame is **n** _____ **m**_____ **n**_____ **l**_____ **t**_____ relatively **h**_____ scores on attention scales, the metrics of subscribers, followers, Likes, or clicks built into social media applications.

>> 내용요약

Social media celebrities seek **o**_____ fame through frequent **i**_____, **u**_____ elite celebrities with **t** _____ like acting or singing. This new form of fame is **m** _____ by attention metrics like followers and Likes, **r** _____ traditional celebrity.

While social media attention is potentially an instrument to **achieve** ends like **elite celebrity**, some content creators **desire ordinary** fame as a **social** end in itself. Not **unlike** reality television stars, social media celebrities are often **criticized** for not having skills and talents associated with **traditional**, elite celebrity, such as acting or singing ability. This **criticism highlights** the fact that digital content creators face real **barriers** to **crossing over** to the sphere of elite celebrity. **However**, the criticism **also misses** the point that the phenomenon of ordinary celebrity **reconstructs** the meaning of fame. The elite celebrity is **symbolized** by the metaphor of the star, characterized by **mystery** and **hierarchical** distance and associated with **naturalized** qualities of talent and class. The **ordinary** celebrity **attracts** attention through regular and frequent **interactions** with other ordinary people. Achieving **ordinary** fame as a social media celebrity is **like** doing well at a game, because in this sphere, fame is **nothing more nor less than** relatively **high** scores on attention scales, the metrics of subscribers, followers, Likes, or clicks built into social media applications.

>> 내용요약

Social media celebrities seek **ordinary** fame through frequent **interactions**, **unlike** elite celebrities with **talents** like acting or singing. This new form of fame is **measured** by attention metrics like followers and Likes, **redefining** traditional celebrity.

240935

Why do we have the **i**_____ that **c**_____ for an exam is the **b**____ learning **s**_____? Because we are **u** _____ to **d**_____ between the various sections of our memory. **I**_____ after reading our textbook or our class notes, information is fully **p**_____ in our mind. It sits in our **c**_____ working memory, in an **a**_____ form. We feel as if we know it, because it is **p**_____ in our **s** _____ storage space ... but this short-term section **h** ___ **n**_____ **t**__ **d**__ **w**____ the **l**_____ memory that we will need in order to **r**_____ the same information a few days later. After a few seconds or minutes, working memory already starts **d**_____, and after a few days, the **e**_____ becomes **e**_____: unless you **r** _____ your knowledge, memory **v**_____. To get information into **l**_____ memory, it is **e**_____ to study the material, then **t**____ yourself, rather than spend all your time **s**_____.

>> 내용요약

Cramming feels **e**_____ because information remains in **s**_____ memory, but it doesn't help **l**_____ retention. To retain knowledge, studying and **s** _____ are essential.

Why do we have the **illusion** that **cramming** for an exam is the **best** learning **strategy**? Because we are **unable** to **differentiate** between the various sections of our memory. **Immediately** after reading our textbook or our class notes, information is fully **present** in our mind. It sits in our **conscious** working memory, in an **active** form. We feel as if we know it, because it is **present** in our **short-term** storage space ... but this short-term section **has nothing to do with** the **long-term** memory that we will need in order to **recall** the same information a few days later. After a few seconds or minutes, working memory already starts **disappearing**, and after a few days, the **effect** becomes **enormous**: unless you **retest** your knowledge, memory **vanishes**. To get information into **long-term** memory, it is **essential** to study the material, then **test** yourself, rather than spend all your time **studying**.

>> 내용요약

Cramming feels **effective** because information remains in **short-term** memory, but it doesn't help **long-term** retention. To retain knowledge, studying and **self-testing** are essential.

240936

The discovery of **m**_____ neurons has profoundly **c** _____ the way we think of a **f**_____ human capacity, learning by **o**_____. As children we **l**_____ a lot by **o**_____ what our parents and friends **d**___. **N** _____, in the first week of life, have an **i**_____ tendency to **s**_____ **o**____ their tongue if their parents stick out theirs. Such **i**_____ is not **p**_____. You may not see the tongue stick out **e**_____ **t**_____ you stick yours out at your newborn, but if you do it **m**_____ times, the tongue will come out **m**_____ **o**_____ than if you do something **d** _____. Babies babble and later start to **i**_____ the sounds their parents produce. Later still, they play with vacuum cleaners and hammers in **i**_____ of their parents. Our **m** _____ cultures, in which we write, speak, read, build spaceships and go to school, can work only because we are not **r**_____ to the behavior we are **b**_____ with or learn by **t**_____ **a**____ **e**_____. We can **l**_____ a lot by simply **w** _____ others.

>> 내용요약

Through the discovery of **m**_____ neuron, we can understand humans **l**_____ a great deal by **c**_____ other people, especially from childhood, which helps our **m**_____ cultures to function properly.

The discovery of **mirror** neurons has profoundly **changed** the way we think of a **fundamental** human capacity, learning by **observation**. As children we **learn** a lot by **observing** what our parents and friends **do**. **Newborns**, in the first week of life, have an **inborn** tendency to **stick out** their tongue if their parents stick out theirs. Such **imitation** is not **perfect**. You may not see the tongue stick out **each time** you stick yours out at your newborn, but if you do it **many** times, the tongue will come out **more often** than if you do something **different**. Babies babble and later start to **imitate** the sounds their parents produce. Later still, they play with vacuum cleaners and hammers in **imitation** of their parents. Our **modern** cultures, in which we write, speak, read, build spaceships and go to school, can work only because we are not **restricted** to the behavior we are **born** with or learn by **trial and error**. We can **learn** a lot by simply **watching** others.

>> 내용요약

Through the discovery of **mirror** neuron, we can understand humans **learn** a great deal by **copying** other people, especially from childhood, which helps our **modern** cultures to function properly.

240937

Have you ever been **s**_____ to hear a recording of your own voice? You might have thought, "Is that really what my voice **s**_____ **l**_____?" Maybe your accent is **m**_____ **p**_____ in the recording than you realized, or your voice is **h**_____ than it seems to your own **e**_____. This is of course quite a **c**_____ experience. The explanation is actually fairly **s**_____. There are two pathways through which we **p**_____ our own voice when we **s**_____. One is the route through which we perceive most **e**_____ sounds, like **w**_____ that travel from the **a**____ through the outer, middle and inner ear. **B**____ because our vocal cords **v**_____ when we **s**_____, there is a second **i**_____ path. Vibrations are **c**_____ through our **b**_____ and stimulate our inner ears **d**_____. **L**_____ frequencies are **e**_____ along this pathway. That makes your voice sound **d**_____ and **r**_____ to yourself than it may **s**_____ to other people.

>> 내용요약

The **d**_____ between your own voice and your **r**_____ voice arises because we hear ourselves through two **p**_____; **e**_____ sounds travel from the air, while **v**_____ from our vocal cords are **t**_____ through our bones, along which **l**_____ frequencies are stressed.

Have you ever been **surprised** to hear a recording of your own voice? You might have thought, "Is that really what my voice **sounds like**?" Maybe your accent is **more pronounced** in the recording than you realized, or your voice is **higher** than it seems to your own **ears**. This is of course quite a **common** experience. The explanation is actually fairly **simple**. There are two pathways through which we **perceive** our own voice when we **speak**. One is the route through which we perceive most **external** sounds, like **waves** that travel from the **air** through the outer, middle and inner ear. **But** because our vocal cords **vibrate** when we **speak**, there is a second **internal** path. Vibrations are **conducted** through our **bones** and stimulate our inner ears **directly**. **Lower** frequencies are **emphasized** along this pathway. That makes your voice sound **deeper** and **richer** to yourself than it may **sound** to other people.

>> 내용요약

The **distinction** between your own voice and your **recorded** voice arises because we hear ourselves through two **pathways**; **external** sounds travel from the air, while **vibrations** from our vocal cords are **transmitted** through our bones, along which **lower** frequencies are stressed.

240938

Biologists **d**_____ two kinds of **s**_____. "**A** _____" traits are ones that have a **c**_____ function but arose on **d**_____ branches of the **e** _____ tree and are in an important sense not "the **s** _____" organ. The wings of birds and the wings of bees are **b** _____ used for flight and are **s**_____ in some ways because anything used for flight has to be built in those ways, but they arose **i**_____ in evolution and have **n**_____ **i** ___ **c**_____ **b**_____ their use in flight. "**H**_____" traits, **i**___ **c**_____, may or may not have a **c**_____ function, but they **d**_____ from a **c**_____ ancestor and **h**_____ have some **c**_____ structure that **i** _____ their being "the **s**_____" organ. The wing of a bat and the front leg of a horse have very **d**_____ functions, but they are all **m**_____ of the **f**_____ of the **a**_____ of all mammals. **A**___ **a**_ **r**_____, they **s** _____ **n**_____ traits like the number of bones and the ways they are **c**_____. To **d**_____ analogy from homology, biologists usually look at the overall **a** _____ of the organs and **f**_____ **o**___ their most **u** _____ properties.

>> 내용요약

Analogous traits, which have **c**_____ functions but arose on **d**_____ branches of **e**_____ tree, have **i** _____ evolved, while homologous traits, which are **d**_____ from a common ancestor, can have **d** _____ functions, which can be differentiated by examining entire **s**_____ of organs and focusing on their most **w**_____ attributes.

Biologists **distinguish** two kinds of **similarity**. "**Analogous**" traits are ones that have a **common** function but arose on **different** branches of the **evolutionary** tree and are in an important sense not "the **same**" organ. The wings of birds and the wings of bees are **both** used for flight and are **similar** in some ways because anything used for flight has to be built in those ways, but they arose **independently** in evolution and have **nothing in common beyond** their use in flight. "**Homologous**" traits, **in contrast**, may or may not have a **common** function, but they **descended** from a **common** ancestor and **hence** have some **common** structure that **indicates** their being "the **same**" organ. The wing of a bat and the front leg of a horse have very **different** functions, but they are all **modifications** of the **forelimb** of the **ancestor** of all mammals. **As a result**, they **share** **nonfunctional** traits like the number of bones and the ways they are **connected**. To **distinguish** analogy from homology, biologists usually look at the overall **architecture** of the organs and **focus on** their most **useless** properties.

>> 내용요약

Analogous traits, which have **common** functions but arose on **different** branches of **evolutionary** tree, have **individually** evolved, while homologous traits, which are **derived** from a common ancestor, can have **dissimilar** functions, which can be differentiated by examining entire **structure** of organs and focusing on their most **worthless** attributes.

Seawater contains an **a**_____ of dissolved oxygen that all **m**_____ animals breathe to stay **a**_____. It has long been **e**_____ in physics that **c**_____ water holds **m**_____ dissolved oxygen than **w**_____ water does — this is one reason that cold **p**_____ seas are **f**_____ of life while **t**_____ oceans are blue, clear, and relatively **p**_____ **p**_____ with living creatures. **T**_____, as global warming **r**_____ the **t**_____ of marine waters, it is self-evident that the amount of dissolved oxygen will **d**_____. This is a **w**_____ and potentially **d**_____ **c**_____ if allowed to **c**_____ to an ecosystem-threatening level. Now scientists have analyzed data indicating that the amount of dissolved oxygen in the oceans has been **d**_____ for more than a half century. The data show that the ocean oxygen level has been **f**_____ **m**_____ **r**_____ than the **c**_____ **r**_____ in water temperature. **F**_____ oxygen levels in water have the potential to **i**_____ the habitat of marine organisms worldwide and in recent years this has led to **m**_____ **f**_____ anoxic events that **k**_____ or **d**_____ populations of fish, crabs, and many other organisms.

>> 내용요약

Ocean temperatures rising due to **g**_____ **w**_____ cause the **r**_____ of oxygen levels in the seawater, which **t**_____ the marine ecosystem.

Seawater contains an **abundance** of dissolved oxygen that all **marine** animals breathe to stay **alive**. It has long been **established** in physics that **cold** water holds **more** dissolved oxygen than **warm** water does — this is one reason that cold **polar** seas are **full** of life while **tropical** oceans are blue, clear, and relatively **poorly populated** with living creatures. **Thus**, as global warming **raises** the **temperature** of marine waters, it is self-evident that the amount of dissolved oxygen will **decrease**. This is a **worrisome** and potentially **disastrous consequence** if allowed to **continue** to an ecosystem-threatening level. Now scientists have analyzed data indicating that the amount of dissolved oxygen in the oceans has been **declining** for more than a half century. The data show that the ocean oxygen level has been **falling more rapidly** than the **corresponding rise** in water temperature. **Falling** oxygen levels in water have the potential to **impact** the habitat of marine organisms worldwide and in recent years this has led to **more frequent** anoxic events that **killed** or **displaced** populations of fish, crabs, and many other organisms.

>> 내용요약

Ocean temperatures rising due to **global warming** cause the **reduction** of oxygen levels in the seawater, which **threatens** the marine ecosystem.

Capuchins — New World Monkeys that live in large social groups — will, in **c**_____, **t**_____ with people all day long, especially if food is **i**_____. I give you this rock and you give me a **t**_____ to eat. If you put two monkeys in cages next to each other, and **o**_____ them both slices of cucumber for the rocks they already have, they will **h**_____ eat the cucumbers. If, however, you give one monkey **g**_____ **i**_____ — grapes being **u**_____ **p**_____ to cucumbers — the monkey that is still **r**_____ cucumbers will begin to **t**_____ them back at the experimenter. Even though she is still getting "**p**_____" the same amount for her **e**_____ of sourcing rocks, and so her **p**_____ situation has not changed, the **c**_____ to another makes the situation **u**_____. **F**_____, she is now willing to **a**_____ all gains — the cucumbers themselves — to **c**_____ her **d**_____ to the experimenter.

>> 내용요약

The **c**_____ with another monkey led to a Capuchin monkey's perception of **u**_____ in rewards, which caused her to **g**_____ **u**___ her rewards despite the same amount.

Capuchins — New World Monkeys that live in large social groups — will, in **captivity**, **trade** with people all day long, especially if food is **involved**. I give you this rock and you give me a **treat** to eat. If you put two monkeys in cages next to each other, and **offer** them both slices of cucumber for the rocks they already have, they will **happily** eat the cucumbers. If, however, you give one monkey **grapes instead** — grapes being **universally preferred** to cucumbers — the monkey that is still **receiving** cucumbers will begin to **throw** them back at the experimenter. Even though she is still getting "**paid**" the same amount for her **effort** of sourcing rocks, and so her **particular** situation has not changed, the **comparison** to another makes the situation **unfair**. **Furthermore**, she is now willing to **abandon** all gains — the cucumbers themselves — to **communicate** her **displeasure** to the experimenter.

>> 내용요약

The **comparison** with another monkey led to a Capuchin monkey's perception of **unfairness** in rewards, which caused her to **give up** her rewards despite the same amount.

Higher education has grown from an **e**_____ to a **m**_____ system across the world. In Europe and the USA, **i**_____ rates of **p**_____ occurred in the decades after the Second World War. Between 2000 and 2014, rates of participation in higher education almost **d**_____ from 19% to 34% across the world among the members of the population in the school-leaving age category (typically 18-23). The dramatic **e**_____ of higher education has been **m**_____ by a wider range of institutions of higher learning and a more **d** _____ **d**_____ of students. Changes from an elite system to a mass higher education system **a**____ **a** _____ **w**_____ **p**_____ needs to build a **s** _____ workforce for the economy. In theory, the expansion of higher education to develop a highly **s**_____ workforce should **d**_____ the role of **e**_____ in the selection and control of students, **i**_____ approaches to assessment which enable lifelong learning: **a** _____ for learning and a focus on **f**_____ for development. In reality, sociopolitical changes to expand higher education have **s**____ **u**___ a 'field of **c**_____' for assessment in higher education. Mass higher education requires efficient approaches to assessment, such as examinations and multiple-choice quizzes, with **m**_____, **i** _____, or **s**_____ feedback, often **c** _____ students to focus more on **g**_____ than **f** _____. **I**___ **c**_____, the **r**_____ small numbers of students in elite systems in the past **a**_____ for **c**_____ **r**_____ between students and their teachers, **w**_____ **f**_____ **f**_____ **s**_____ the minds, academic skills, and even the characters of students.

Higher education has grown from an **elite** to a **mass** system across the world. In Europe and the USA, **increased** rates of **participation** occurred in the decades after the Second World War. Between 2000 and 2014, rates of participation in higher education almost **doubled** from 19% to 34% across the world among the members of the population in the school-leaving age category (typically 18-23). The dramatic **expansion** of higher education has been **marked** by a wider range of institutions of higher learning and a more **diverse demographic** of students. Changes from an elite system to a mass higher education system **are associated with political** needs to build a **specialized** workforce for the economy. In theory, the expansion of higher education to develop a highly **skilled** workforce should **diminish** the role of **examinations** in the selection and control of students, **initiating** approaches to assessment which enable lifelong learning: **assessment** for learning and a focus on **feedback** for development. In reality, sociopolitical changes to expand higher education have **set up** a 'field of **contradictions**' for assessment in higher education. Mass higher education requires efficient approaches to assessment, such as examinations and multiple-choice quizzes, with **minimalist**, **impersonal**, or **standardised** feedback, often **causing** students to focus more on **grades** than **feedback**. **In contrast**, the **relatively** small numbers of students in elite systems in the past **allowed** for **closer relationships** between students and their teachers, **with formative feedback shaping** the minds, academic skills, and even the characters of students.

>> 내용요약

Higher education has **t**_____ globally from an **e**_____ to a **m**_____ system, driven by political-economic needs for a specialized workforce, but this **e**_____ has created **c**_____ in assessment methods, shifting from **p**_____ **f**_____ to more standardized, efficient approaches focused on **g**_____.

>> 내용요약

Higher education has **transformed** globally from an **elite** to a **mass** system, driven by political-economic needs for a specialized workforce, but this **expansion** has created **contradictions** in assessment methods, shifting from **personalized feedback** to more standardized, efficient approaches focused on **grades**.
