1. 다음 글의 제목으로 가장 적절한 것은? [2.8점]

Most people have a time of day when they feel at their best, whether it is in the morning, the afternoon, or the evening. Some of us are night owls, some are early birds, and those in between may feel most active in the afternoon. If you can organize your day and divide up your work, make a point of handling tasks that demand close attention during your best hours. If a task calls for creativity and fresh ideas, however, it is better to take it on at your "worst" time of day. So if you are an early bird, save your creative work for the evening, and night owls should do the opposite. When your mind and body are less alert than at their peak, the muse of creativity wakes up and is free to wander. In other words, creative ideas flow when your mental machinery is relaxed rather than standing at attention.

* muse: (예술적) 영감

① Early Birds Make the Most Creative Thinkers
② Tired Minds, Bright Ideas: The Best Time to Be Creative
③ Why Focus Is the Key to Every Kind of Task
④ Know Your Body Clock to Avoid Careless Mistakes
⑤ Stay Alert All Day to Keep New Ideas Coming

[2~3] 다음 글을 읽고 물음에 답하시오.

Most of us treat an unpleasant feeling as a verdict on our situation. When anger arrives, we assume someone has wronged us; when anxiety arrives, we assume the danger is real. Psychologists who study emotion argue that this way of reading our feelings is (a)**misguided**. A feeling is not a report on the world but a proposal about it: the brain's quickest guess, put together from past experience before all the evidence is in. Because the guess is so often right, it tends to feel (b)**doubtful**. But a proposal can be examined. When you name the feeling, describe the bodily sensation beneath it, and ask what else could explain it, the emotion (c)**loosens** its hold on you. Nothing about the feeling is denied; what changes is its (d)**authority**. It is no longer the final word but one explanation among several. People who practice this do not feel less. They simply stop (e)**complying with** every signal as if it were an order.

* verdict: 판결

2. 다음 글의 제목으로 가장 적절한 것은? [2.8점]

① Why Some People Feel More Deeply Than Others
② Emotions: The Body's Most Reliable Witness
③ How to Silence the Feelings You Dislike
④ Emotions Offer Possibilities, Not Certainties
⑤ The Hidden Cost of Putting Feelings into Words

3. 윗글의 밑줄 친 (a)~(e) 중에서 문맥상 낱말의 쓰임이 적절하지 않은 것은? [2.8점]

① (a) ② (b) ③ (c) ④ (d) ⑤ (e)

4. 요약문의 빈칸에 들어갈 말로 가장 적절한 것끼리 짝지어진 것은? [2.8점]

When we observe a correlation, we conclude that one variable is related to another. Even when such a relationship exists, however, neither one may actually be causing the other. The following example shows why it is risky to make claims about cause on the basis of a correlation alone. Researchers working for the U.S. Army studied motorcycle accidents, trying to connect the number of accidents with other variables such as income level and age. They found that the best predictor was the number of tattoos a rider had. It would be a ridiculous error to conclude that tattoos cause motorcycle accidents or that motorcycle accidents cause tattoos. Clearly, a third variable is related to both, perhaps a preference for risk. A person who is willing to take risks is likely to get tattoos and also to take more chances on a motorcycle.

⬇

<요약문> A correlation shows only that two things are (A); treating it as proof of cause can be (B), since a (C) factor, such as a taste for risk, may lie behind both.

① linked — convincing — minor
② causally related — misleading — minor
③ linked — misleading — hidden
④ causally related — convincing — hidden
⑤ linked — misleading — minor

5. 빈칸 (A)~(L)에 들어갈 단어를 〈Word Box〉에서 제시하였다. 이 중 어느 빈칸에도 들어갈 수 없는 단어로만 묶인 것은? [2.8점]

- In the past, the royal family (A) _____d in a large palace.
- His paintings (B) _____ed humorous scenes in various locations, including a beach and a train station.
- The company's profits have (C) _____ed last year's, indicating significant growth.
- The (D) _____ that success depends solely on luck is incorrect.
- Children must be accompanied by a (E) _____ at all times.
- He was well-respected among his colleagues for his (F) _____ and professional behavior.
- It is a lawyer's job to successfully (G) _____ claims made about their client during their trial.
- He was (H) _____ when he realized that he had been deceived.
- Cows are considered sacred in India, so it is (I) _____ to eat beef.
- In areas where motor vehicle access is (J) _____ed, using bicycles as cargo vehicles is encouraged.
- The ship sank in the ocean, and all of the sailors (K) _____ed.
- A complete medical examination is a (L) _____ for receiving any surgical treatment.

<Word Box>

reside	rage	depict	surpass
notion	slope	guardian	benign
spine	refute	furious	continent
taboo	restrict	molecular	perish
precondition			

① rage, slope, molecular, guardian, notion
② spine, continent, rage, furious, guardian
③ molecular, slope, continent, notion, furious
④ spine, rage, slope, guardian, notion
⑤ continent, spine, molecular, rage, slope

[6~7] 다음 글을 읽고 물음에 답하시오.

[I] Compean, a hiker lost in the mountains, had sent the police a picture of himself. He had already spent one night in harsh conditions, so the police were worried about him spending a second one. (a)**They decided to use social media to find out whether anyone could spot clues in the picture.** (b)**They posted the picture online and asked if anyone recognized the scenery in it.** (c)**The picture, which was shared by the police, were seen by a Californian named Ben Kuo.**

[II] (a)**One of Kuo's hobbies is examining satellite images to track forest fires and warning people of possible dangers.** (b)**He also enjoys figuring out where pictures were taken and where movies were filmed.** (c)**When he saw Compean's picture, he became immediately interesting in it.**

[III] (a)**The black ash on Compean's legs reminded Kuo of a recent forest fire.** (b)**This helped him inferring Compean's approximate location.** (c)**Kuo knew the area well because he had tracked the fire before and had studied its features in satellite images.**

[IV] (a)**From the plants and trees in the picture, Kuo was able to guess where was Compean.** (b)**The north side of the mountain has no green valleys like those which appear in the picture, so it had to be the south side.** (c)**As a final step, he compared the view in the picture with more satellite images, and at last he found a match.**

[V] (a)**Kuo then provided the police with Compean's likely location.** (b)**The police sent a rescue helicopter there and found Compean less than a mile from the area that Kuo had pointed out.** Thanks to Kuo's unusual skills, Compean was rescued unharmed, and he later thanked Kuo on a video call. (c)**The local police are now reminding hikers who go alone to tell others their planned route and to always bringing a paper map.**

6. 윗글 [I]~[V]를 읽고 이해한 내용으로 적절하지 <u>않은</u> 것을 2개 고르면? [2.8점]

① Worried that Compean might have to spend a second night in harsh conditions, the police shared his photo online. They hoped that someone would recognize the place shown in it.
② Kuo uses satellite images to follow forest fires as a hobby. However, working out where a photo was taken is not something he usually enjoys.
③ The ash on Compean's legs led Kuo to connect the picture with a fire he had followed before. His earlier study of satellite images of the area gave him an advantage.
④ Kuo ruled out one side of the mountain by comparing the plants in the photo with what he knew. He then checked more satellite images before giving the police a likely location.
⑤ The rescue team found Compean within a mile of the spot Kuo had marked. The police now advise hikers to rely on the GPS in their phones.

7. 윗글 [I]-[V]의 밑줄 친 (a)-(c)가 어법상 적절하지 <u>않은</u> 것끼리만 짝지어진 것은? [2.8점]

① [I] (a) — [II] (b) — [III] (a) — [IV] (b) — [V] (a)
② [I] (a) — [II] (c) — [III] (b) — [IV] (a) — [V] (c)
③ [I] (b) — [II] (a) — [III] (c) — [IV] (c) — [V] (b)
④ [I] (c) — [II] (c) — [III] (b) — [IV] (a) — [V] (c)
⑤ [I] (a) — [II] (b) — [III] (a) — [IV] (b) — [V] (b)

8. 다음 글의 내용과 일치하지 <u>않는</u> 것을 고르시오. [2.8점]

Since there were no horses to ride, the Inca empire became remarkably good at carrying messages on foot. Messengers were posted along the royal roads to deliver the king's orders and the reports that came in from across his lands. Known as Chasquis, they lived in groups of four to six in small huts set one to two miles apart along the roads. All of them were young men and excellent runners, and they kept watch on the road in both directions. When they caught sight of another messenger approaching, they hurried out to meet him. The huts were built on high ground, within sight of one another. As a runner came near the next hut, he began to call out and repeated the message three or four times to the one running out to meet him. Under good conditions, the empire could relay a message 1,000 miles in three or four days.

① A messenger approaching the next hut passed on the message only in writing, without calling it out.
② The messengers carried both the king's orders and reports from across the empire.
③ The huts were placed on high ground so that each could be seen from the next.
④ The runners kept an eye on the road on both sides and rushed out when another messenger came into view.
⑤ Under good conditions, a message could travel about 1,000 miles in less than a week.

[9~10] 다음 글에서 전체 흐름과 관계 <u>없는</u> 문장을 고르시오. [각 2.8점씩]

9.

Trouble can follow when a foreign species suddenly enters an ecosystem, and the story of Britain's red and grey squirrels shows this clearly. ① When the grey squirrel arrived from America in the 1870s, the two species began to compete for the same food and habitat, which put the native red squirrels under pressure. ② The grey had the edge because it can adapt its diet; it is able to eat green acorns, for instance, while the red can digest only ripe ones. ③ With its bright reddish fur and tufted ears, the red squirrel has long been one of Britain's best-loved wild animals. ④ In the same area of forest, grey squirrels can use up the food supply before the reds even get a bite. ⑤ Greys can also live more densely and in a wider range of habitats, so they have survived more easily when woodland has been destroyed. As a result, the red squirrel has come close to extinction in England.

* acorn: 도토리

10.

Imagine you are pedaling your bicycle on a level road. You stop pedaling, so no force is now acting to move you forward. What happens? You gradually slow down. ① How could you slow down more suddenly, in a shorter distance? By putting the brakes on. ② Because the brakes change your movement by slowing you down faster, they must be exerting a force on you and the bicycle as they grip and rub against the wheel rims. ③ This force, called friction, slows moving things down by acting in the direction opposite to their movement. ④ Even without the brakes on, other friction forces act on you, such as the wheels rubbing on the axles and the air pushing against you as you move forward. ⑤ Changing to a lower gear lets a cyclist pedal uphill more easily. Look at a shopping cart, and you can see where most of its friction comes from: the axles rubbing on the body as they turn.

* axle: (바퀴의) 축

11. 다음 글의 내용과 일치하지 <u>않는</u> 것을 고르시오. [2.8점]

Flamingos are famous for their bright pink feathers, but they are not born that way. Chicks hatch covered in soft grey or white feathers, and it usually takes two to three years for their adult color to develop fully. The pink comes from their diet. Flamingos feed on algae and tiny shrimp-like animals that contain natural pigments called carotenoids, the same substances that make carrots orange. As the birds digest this food, the pigments are stored in their feathers, skin, and legs. A flamingo that eats less of this food slowly turns pale. For this reason, zoos add carotenoids to their birds' meals; without them, a whole flock would gradually fade to white. Interestingly, parents also lose some of their color while raising their young. They feed their chicks a special milk-like liquid made in their throats, and producing it uses up pigment from their own bodies.

* carotenoid: 카로티노이드(색소의 일종)

① A young flamingo's feathers reach their full adult color within a few weeks of hatching.
② Some of the substances that color flamingos can also be found in a common vegetable.
③ A flamingo whose diet lacks certain pigments will gradually lose its pink color.
④ Zoos give flamingos extra pigments to keep their feathers from turning white.
⑤ Raising chicks can make parent flamingos look less pink for a while.

[12~13] 다음 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?

12. [2.8점]

In other words, the senses still pick up signals, but the brain does not handle them as it normally would, so the sleeper stays asleep.

One of the most striking features of a sleeping animal or person is that it does not respond normally to what is going on around it. (①) If you open the eyelids of a sleeping mammal, its eyes will not see normally; in effect, they are blind. (②) Some visual information apparently gets in, but it is shortened or weakened rather than processed as usual, and the other senses behave in much the same way. (③) This shutting-off of perception probably serves to protect sleep, so some researchers do not include it in the definition of sleep itself. (④) But since sleep would be impossible without it, it seems essential to how sleep should be defined. (⑤) Still, many animals, including humans, use the in-between state of drowsiness to gain some of the benefits of sleep without shutting off their senses completely.

13. [2.7점]

On its own, however, a vibrating string makes hardly any sound, because it is so thin that it pushes very little air around.

When you pluck a guitar string, it moves back and forth hundreds of times a second, so fast that all you see is a blurred outline of the moving string. (①) But if you attach the string to a big hollow box, like the body of a guitar, the vibration is amplified and the note is heard loud and clear. (②) The string passes its vibration on to the wooden panels of the guitar body, which move back and forth at the same rate as the string. (③) The vibrating wood creates much more powerful waves in the air pressure, and these waves travel away from the guitar. (④) When they reach your eardrums, the eardrums flex in and out the same number of times a second as the original string. (⑤)

* pluck: (현을) 뜯다 ** amplify: 증폭하다

14. 다음 중 지문 내용을 바탕으로 추론할 수 <u>없는</u> 내용은? [2.8점]

Dr. Carol Dweck, a psychology professor at Stanford, is known around the world as the pioneer of the "growth mindset," a way of continuing to grow, learn, and keep going in our efforts. Dweck found that kids who are told they are "smart" actually do worse on later tasks, because they choose easier tasks to avoid any evidence that they are not smart; Dweck links this pattern to what she calls a "fixed mindset," the belief that intelligence cannot change. In contrast, she found that kids who are praised for their effort rather than for their smarts develop what she calls a "growth mindset." They learn that their effort is what led to their success and that, if they keep trying, they will improve and achieve more over time. These kids end up taking on tougher challenges and feeling better about themselves. "Emphasizing effort gives a child a variable that they can control," Dweck has explained.

① A student praised for working hard on a science project is more likely to try a harder project next time.
② A child who is often called "a genius" may start avoiding puzzles that could prove otherwise.
③ A coach who praises players' practice habits rather than their talent may see them keep trying after a loss.
④ A teacher who tells a struggling student that effort changes results gives the student something to control.
⑤ A student praised for being smart will usually choose the hardest problems to show off his ability.

15. 다음 빈칸에 들어갈 말로 가장 적절한 것은? [2.8점]

Conventional medicine has long held that depression is caused by an imbalance of neurotransmitters in the brain. Yet this account runs into a serious difficulty. The imbalance of substances in the brain is a result of depression, not its cause; that is, depression lowers the levels of brain substances such as serotonin and noradrenaline, rather than a drop in those substances bringing on depression. _____. Our consciousness is a more fundamental entity that goes beyond the workings of the brain, and the brain is no more than an organ of consciousness. The root cause of depression, then, is a distortion of our state of consciousness: a consciousness that has lost its sense of self and the meaning of life. Such a disease of consciousness may show itself in the form of depression.

* neurotransmitter: 신경 전달 물질

** serotonin, noradrenaline: 신경 전달 물질의 종류

① Therefore, the imbalance of brain chemicals should remain the main target of treatment
② Instead, depression should be seen as a problem of consciousness rather than of brain chemistry
③ For this reason, doctors should stop studying the brain altogether
④ As a result, serotonin and noradrenaline turn out to be the true causes of depression
⑤ Consequently, depression can be cured simply by finding a new meaning in life

16. 다음 글의 주제로 가장 적절한 것은? [2.8점]

Up until about 6,000 years ago, most people lived off the land, and many moved from place to place throughout the year, hunting for food or leading their livestock to areas with enough to eat. These people had no need to tell the time, because their lives followed natural cycles such as the changing seasons or the rising and setting of the sun. Gradually, however, more people began to settle in larger communities, and some of them needed to know the time. Priests, for example, wanted to know exactly when to hold religious ceremonies. It was this need that led people to invent the first clocks — devices that show, measure, and keep track of passing time. Clocks have remained important ever since. Today, they are used for serious tasks such as setting the timetables of busy airports — if the time were wrong, airplanes might crash into each other while taking off or landing!

① How Farming Changed The Way People Moved
② How Settled Life Created The Need For Clocks
③ Why Priests Were The First To Watch The Sun
④ The Dangers Of Relying On Clocks At Airports
⑤ How Natural Cycles Replaced The First Clocks

[17~18] 다음 글을 읽고 물음에 답하시오.

[I] Over time, babies build up expectations about which sounds they will hear and when. They keep in memory the sound patterns that come up on a regular basis, and they form guesses like, "If I hear this sound first, it will most likely be followed by that one." Scientists have concluded that much of babies' skill in learning language comes from their ability to calculate statistics. For babies, this means paying close attention to the patterns that repeat in the speech around them. They remember, in a systematic way, how often sounds occur, in what order, with what gaps between them, and with what changes of pitch. This store of memory allows them to keep track, within the circuits of their brains, of how frequently sound patterns appear, and to use this knowledge to predict what a pattern of sounds means. No one hands them these rules; they draw the rules out of what they hear.

[II] The discovery of mirror neurons has deeply changed the way we think about a basic human ability: learning by watching. As children, we learn a great deal by observing what our parents and friends do. Even in their first week of life, newborns have a natural tendency to stick out their tongue when a parent sticks out his or hers. This copying is far from perfect. The tongue may not come out every time you show yours to a newborn, but if you repeat it many times, it will come out more often than when you do something else. Later, babies babble and begin to copy the sounds their parents make, and later still, they play with vacuum cleaners and hammers just as their parents do. Our modern cultures, in which we read, write, build spaceships, and go to school, can function only because we are not limited to the behavior we are born with or the things we learn by trial and error. Much of what we know, we pick up simply by watching others.

* mirror neuron: 거울 뉴런

17. 윗글 [I]와 [II]의 공통된 내용을 가장 잘 설명한 것은? [2.7점]

① Babies come into the world already equipped with most of the language and behavior they will need.
② Babies learn language mainly by calculating how often sounds appear rather than by copying the people around them.
③ From very early on, babies acquire skills by carefully noticing the sounds and actions of the people around them.
④ Babies learn best when their parents repeat the same sounds and actions to them on purpose many times.
⑤ Babies copy what they see and hear so exactly that their learning hardly ever involves mistakes.

18. 윗글 [I] – [II]에서 답을 찾을 수 없는 질문은? [2.7점]

① [I] At what age do babies begin to turn the sound patterns they remember into their first words?
② [I] What kinds of information about sounds do babies store in memory?
③ [II] How do newborns react when a parent shows them his or her tongue?
④ [II] How can we tell that a newborn's copying is more than a matter of chance?
⑤ [II] What makes it possible for modern cultures to function, according to the writer?

Many modern concrete structures begin to crack within a few decades, yet some Roman harbors and domes have ①**endured** for nearly two thousand years. For a long time, scientists assumed that the Romans had simply used better raw materials. Recent studies, however, point to a different explanation. Roman builders mixed lime into their concrete in a way that left small white lumps scattered through it. These lumps were once dismissed as a sign of ②**flawed** mixing, but they turn out to serve a purpose. When a tiny crack forms and rainwater leaks in, the water reacts with the lime and produces new minerals that ③ **seal** the gap before it can widen. In seawater, a similar reaction even allows fresh crystals to grow inside the concrete and ④ **undermine** it over time. In other words, the material can partly repair itself. Engineers now hope to ⑤ **revive** this ancient recipe to build structures that last longer and need fewer repairs.

* lime: 석회

20. 다음 빈칸에 들어갈 말로 가장 적절한 것은? [2.8점]

Memory does more than make thinking possible; it shapes what we experience and how we hold on to those experiences for years to come. Suppose my heart failed and I had to depend on an artificial one. I would be no less myself. If I lost an arm in an accident and had it replaced with an artificial arm, I would still be essentially me. As long as my mind and memories stay whole, I will go on being the same person, no matter which part of my body, other than the brain, is replaced. On the other hand, when someone suffers from advanced Alzheimer's disease and his memories fade, people often say that he "is not himself anymore," or that it is as if the person "is no longer there," even though his body has not changed at all. It seems, then, that _____.

① our sense of self rests on our body as much as on our memories
② the brain is the only part of the body that can never be replaced
③ artificial body parts slowly change the personality of those who use them
④ who we are depends far more on what we remember than on the body we live in
⑤ memory helps us think clearly but has little to do with who we are

21. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? [2.8점]

Whenever a new medium comes along, whether it is the printed book, television, or social media, and you start to use it, it is as if you are putting on a new pair of goggles with their own special colors and lenses.

(A) The way information reaches you, McLuhan claimed, matters more than the information itself. Television, for example, teaches you that the world is fast and that it is all about surfaces and appearances.
(B) Each pair makes you see the world a little differently. So when you start to watch television, even before you take in the message of any particular show, you begin to see the world as if it were shaped like television itself.
(C) That is why Marshall McLuhan argued that every new medium, every new way for humans to communicate, carries a hidden message of its own. It gently guides us to see the world according to a new set of codes.

① [A] → [B] → [C] ② [B] → [A] → [C] ③ [B] → [C] → [A]
④ [C] → [A] → [B] ⑤ [C] → [B] → [A]

22. 보기의 (A)~(I) 중 밑줄 친 단어의 동의어가 문맥상 적절하지 <u>않은</u> 것끼리만 묶은 것은? [2.8점]

(A) The factory has [**suspended**(=halted)] production due to lack of demand.
(B) People live longer now because they have better [**hygiene**(=nutrition)] and healthcare.
(C) Digital devices may subtly [**inhibit**(=hinder)] reading comprehension by preventing people from navigating long texts efficiently.
(D) The artist's work showcased a [**myriad**(=multitude)] of styles inspired by her travels around the world.
(E) During the debate, the candidates relied heavily on confusing [**rhetoric**(=evidence)] that didn't match their arguments.
(F) Full [**consent**(=agreement)] from both sides is necessary to amend the contract.
(G) The anonymous donor didn't want to [**disclose**(=reveal)] her identity to the public.
(H) They need a [**sensible**(=emotional)] person who can peacefully settle their conflicts.

23. 다음 글 [I]~[II]의 빈칸에 들어갈 말로 가장 적절한 것끼리 짝지어진 것은? [2.8점]

[I] The law of demand states that people buy more goods and services as prices fall and fewer as prices rise. Giffen goods, however, are special products to which this traditional law does not apply. Rather than turning to cheaper substitutes, consumers demand more of a Giffen good when its price goes up and less of it when its price goes down. Rice in China is one example, since people tend to buy less of it when its price falls. This is because a drop in the price of rice leaves people with more money to spend on other kinds of products, such as meat and dairy, and so they change their spending pattern. When rice becomes more expensive, on the other hand, people eat more of it. In the case of Giffen goods, then, demand moves _____.

[II] Limiting the number of items customers can buy can actually boost sales. Brian Wansink, a professor of marketing, investigated the effectiveness of this tactic in 1998. He persuaded three supermarkets in Sioux City, Iowa, to offer Campbell's soup at a small discount: 79 cents rather than 89 cents. The discounted soup was sold in one of three conditions: a control with no limit on how many cans could be bought, and two tests in which customers could buy no more than four or twelve cans. Where there was no limit, shoppers bought 3.3 cans on average, whereas in the limited conditions they bought 5.3 on average. The findings are especially convincing because the test took place in real supermarkets with genuine shoppers, not in a laboratory where consumers might behave differently. It seems that shoppers are pushed to buy more by _____.

* Giffen good: 기펜재

① [I] in the opposite direction to the price — [II] a sense that an item is in short supply
② [I] in the same direction as the price — [II] a larger discount on the price
③ [I] regardless of any change in the price — [II] the freedom to buy as much as they want
④ [I] in the opposite direction to the price — [II] a larger discount on the price
⑤ [I] in the same direction as the price — [II] a sense that an item is in short supply

서술형 1. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것을 영어로 쓰시오. [4점]

To rise, a fish has to lower its overall density, and most fish manage this with an organ called a swim bladder. The fish fills the bladder with oxygen taken from the surrounding water, and as it fills, the bladder expands. The fish now takes up more space, but its weight has not grown by much. In other words, its density has dropped, so the upward force acting on it becomes stronger. When the bladder is fully expanded, the fish reaches its greatest volume and is pushed up toward the surface. Not every fish rises in this way, however. Some species have no need for a swim bladder because they spend their whole lives moving along the ocean floor, and others rise and sink by driving themselves forward through the water.

* swim bladder: 부레

-주어진 첫 글자 포함하여 쓸 것
-주어진 글자 수에 맞추어 쓸 것
-본문에 있는 단어는 사용할 수 없음 (변형도 불가)

Most fish rise by using a swim bladder, which makes their bodies (A) without making them much (B).
(A) b _ _ _ _ _
(B) h _ _ _ _ _ _
(A) _____ (B) _____

서술형 2. 다음 글을 읽고 질문에 대한 답을 아래 조건에 따라 영어로 쓰시오. [6점]

Cartilage plays a vital role in keeping a joint healthy, especially a joint that carries the body's weight, such as the knee. Picture for a moment the inner workings of your left knee as you walk down the street. When you shift your weight from your left leg to your right, the pressure on your left knee is released. At that moment, the cartilage in your left knee "drinks in" joint fluid, much as a dry sponge soaks up water. When you take the next step and put your weight back on your left leg, much of that fluid is squeezed out again. This constant movement of fluid into and out of the cartilage allows it to cope with the on-and-off pressure of walking without breaking down. A knee that is rarely moved, by contrast, receives far less of this fluid and slowly loses its strength.

* cartilage: 연골

Q. Why does the cartilage in the knee not break down even though walking puts pressure on it again and again?
답 ➔ It does not break down because _____ of walking.

[조건] 1. 주어진 단어(구)를 모두 사용하되, 새로운 단어는 추가하지 말 것
2. 단어의 형태는 문맥에 맞게 변형할 수 있음.
3. 묶음으로 제시된 단어(구)는 분리하지 말고 사용할 것.
4. 문장을 완성하는 데 필요한 경우, 문장부호를 적절히 사용할 것.
(예시 , / . / ! / ; / : 등등)

[단어(구)] allow / the on-and-off pressure / move / it / joint fluid / to cope with / keep / it / into and out of

서술형 3. 다음 글을 읽고, 밑줄 친 (a)~(f) 중에서, 문맥상 낱말의 쓰임이 적절하지 <u>않은</u> 것을 2개 골라 올바르게 고치시오. (틀린 낱말의 기호를 표기하고 고칠 것) [4점]

According to legend, once a vampire bites a person, that person also becomes a vampire who (a)**<u>needs</u>** the blood of others. Costas Efthimiou, a physics professor at the University of Central Florida, used some simple math that (b)**<u>disproves</u>** the existence of these hugely popular creatures. Suppose that on January 1st, 1600, the human population was just over five hundred million. If the first vampire appeared that day and bit one person a month, there would have been two vampires by February 1st. A month later there would have been four, the next month eight, then sixteen, and so on, with the number of vampires (c)**<u>shrinking</u>** every month. At this rate, in just two and a half years, the entire human population would have been (d)**<u>converted</u>** into vampires, with no humans left. But look around you. Have vampires taken over the world? Clearly not, and the reason is (e)**<u>complicated</u>**: there is no such thing as a vampire. The legend, in other words, (f)**<u>fails</u>** when tested by simple math.

( ) _____ → _____
( ) _____ → _____

과목코드	구분	2026학년도 2학기 중간고사	공통영어2	출제교사	부장	교감
03	일시	(10)월 (1)일 (3)교시		구○윤, 남○은, 조○아, 한○희, 한○연		
	대상	(1)학년 (1~13)반				

서술형 4. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (a), (b), (c)에 각각 들어갈 말로 가장 적절한 것을 쓰시오. [6점]

Plato's realism applies to every part of experience, but it is easiest to understand through the nature of mathematical and geometrical objects like circles. He raised a simple question: what exactly is a circle? You might point to one carved into stone or drawn in the sand. Plato, however, would reply that on close inspection, neither that circle nor any other circle in the physical world is perfect. Each of them has flaws, and each is subject to decay as time passes. How, then, is it possible to speak of perfect circles when we can never see or touch one? Plato's remarkable answer was that the world we see is a poor reflection of a deeper, unseen reality of Forms, or universals, where perfect cats chase perfect mice in perfect circles around perfect rocks. For Plato, these Forms make up the true reality, an invisible but perfect world that lies beyond our senses.

* universal: 보편자

[조건] 1. 주어진 본문에서 찾아 쓸 것.
2. 각 빈칸에는 한 단어만 쓸 것.
3. 주어진 글의 핵심 내용을 반영할 것.
4. 문맥과 어법에 맞는 형태로 쓸 것.
(필요시 본문 속 단어의 형태를 바꿔 쓸 수 있음)

According to Plato, no circle that we can see or touch is truly (a) _____, since each one has flaws and (b) _____ over time; such circles merely (c) _____ a deeper reality of Forms that our senses cannot reach.
(a) _____ (b) _____ (c) _____

서술형 5. 다음 글의 빈칸에 들어갈 말을 박스 안에 주어진 단어를 모두 이용하여 의미와 어순에 맞게 숫자를 배열하시오. (답은 숫자로만 적을 것, 모든 숫자를 사용할 것) (ex: 답:1-5-4-3-,,,) [4점]

Anyone who hopes to respect and truly understand other cultures should begin by taking a fresh look at the golden rule: "I treat others in the way I want to be treated." At first glance, the rule seems sensible; when we are as kind to others as we wish them to be to us, we can expect the same kindness in return. It works best in a monocultural setting, where people all share the same cultural framework. In a multicultural setting, however, a word, gesture, belief, or view may mean different things to different people, and there the rule can backfire: it may suggest that my culture is superior to yours. _____. Such misunderstandings can easily turn into real problems.

1. is not being interpreted	6. it can also create
2. where we believe	7. what is right
3. in which it was meant	8. in the way
4. a frustrating situation	9. we are doing
5. but what we are doing	

답: _____

서술형 6. 다음 글을 읽고, 〈보기〉에서 글의 내용과 일치하는 문장의 번호를 찾아 모두 쓰시오. (채점기준: 맞은 개수 각 1점, 틀린 개수 1점 감점, 최하점 0점) [6점]

Each beech tree grows in its own particular spot, and soil conditions can differ greatly within just a few yards. The soil may hold a great deal of water or almost none; it may be rich in nutrients or poor in them. Accordingly, each tree grows faster or slower and makes more or less sugar, so you would expect every tree to photosynthesize at its own rate. The rate, however, turns out to be the same. Whether they are thick or thin, all the trees of the same species use light to produce the same amount of sugar per leaf. Some trees still have plenty of sugar and some have less, but the trees make up for this difference by moving sugar from one to another. This takes place underground, through the roots. Whoever has more than enough sugar hands some over; whoever is running short receives support. Working as a network, the trees make sure that none of them falls too far behind.

* photosynthesize: 광합성하다

[보기]
1. Soil conditions under beech trees are nearly identical within a small area.
2. Some beech trees grow in soil that holds far more water than the soil of others.
3. Because of differences in soil, beech trees differ in how fast they grow.
4. Thicker beech trees produce more sugar per leaf than thinner ones.
5. Regardless of their thickness, trees of one species make an equal amount of sugar with each leaf.
6. Sugar is passed from tree to tree mainly through the air and the leaves.
7. Trees with a surplus of sugar share part of it with trees that lack it.
8. The passage suggests that beech trees support one another through an underground network.
9. In the end, every beech tree holds exactly the same total amount of sugar.
10. Beech trees compete with each other for sugar so that only the strongest survive.
11. A tree that cannot make enough sugar on its own may be supported by other trees.

답: _____

	대상	(1)학년 (1~13)반				

서술형 7. 다음 글 [A]의 내용을 표 [B]로 도식화 하였다. [B]의 빈칸 (a), (b), (c)에 들어가기에 가장 적절한 어구를 글 [A]에서 찾아서 주어진 조건에 맞게 쓰시오. 〈조건〉 - 본문에 나온 표현 그대로 쓸 것, 변형 금지 [6점]

[A]

Think of the brain as a city. Suppose you looked out over a city and asked, "Where is the economy?" You would soon realize that the question has no good answer. The economy is not located anywhere in particular; rather, it comes out of the interaction of all the elements, including the stores, the banks, the merchants, and the customers. The brain's operation works in the same way: it does not take place in a single spot. Just as in a city, no neighborhood of the brain operates in isolation. In both brains and cities, everything emerges as the residents interact with one another, at every scale, whether they are close together or far apart. Trains bring materials and textiles into a city, where they are processed into the economy. In much the same way, the raw electrochemical signals from our sensory organs travel along superhighways of neurons, and there they are processed and transformed into our conscious reality.

[B]

Step	Brain		City
What comes in	Raw (a) _____ signals from the sense organs		Materials and textiles
How it travels	Along superhighways of neurons	≒	Carried in by trains
What happens to it	Handled and turned into something new		(b) _____
What it becomes	Our (c) _____ reality		The economy

(a) _____ (b) _____ (c) _____

끝.
